

During a storm, mission operations should be suspended for 30 minutes following the last

**LIGGTNING STRIKE**

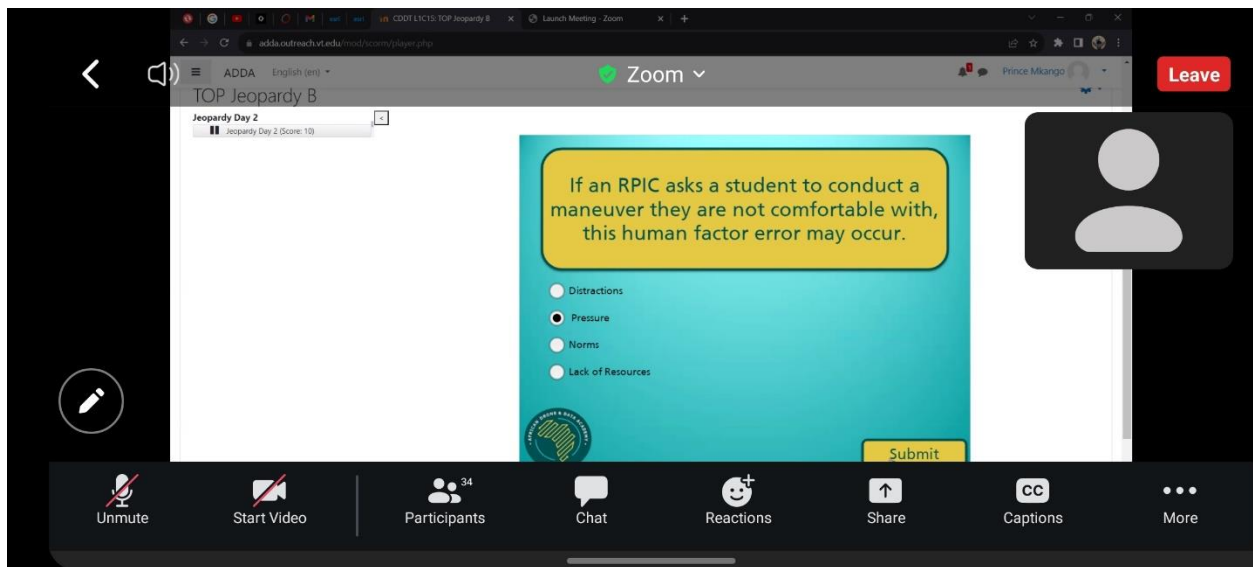

The flight operations manual should include operations procedures that include..

**OPERATING LIMITATIONS AND CONDITIONS**

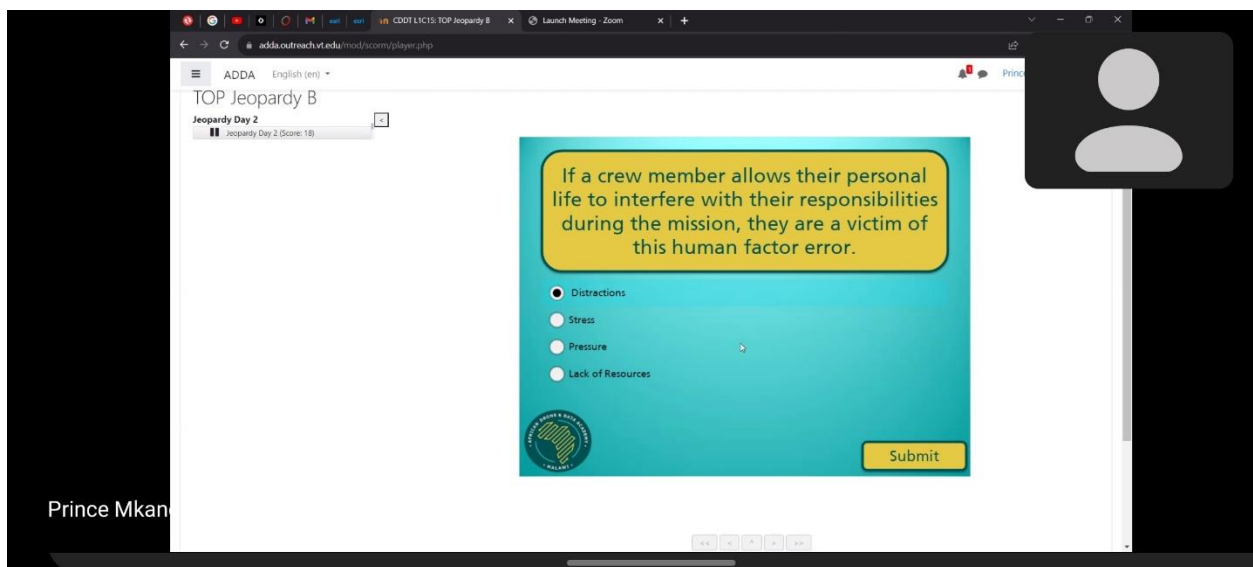

If an RPIC asks a student to conduct a maneuver they are not comfortable with, this human factor error may occur.

**PRESSURE**

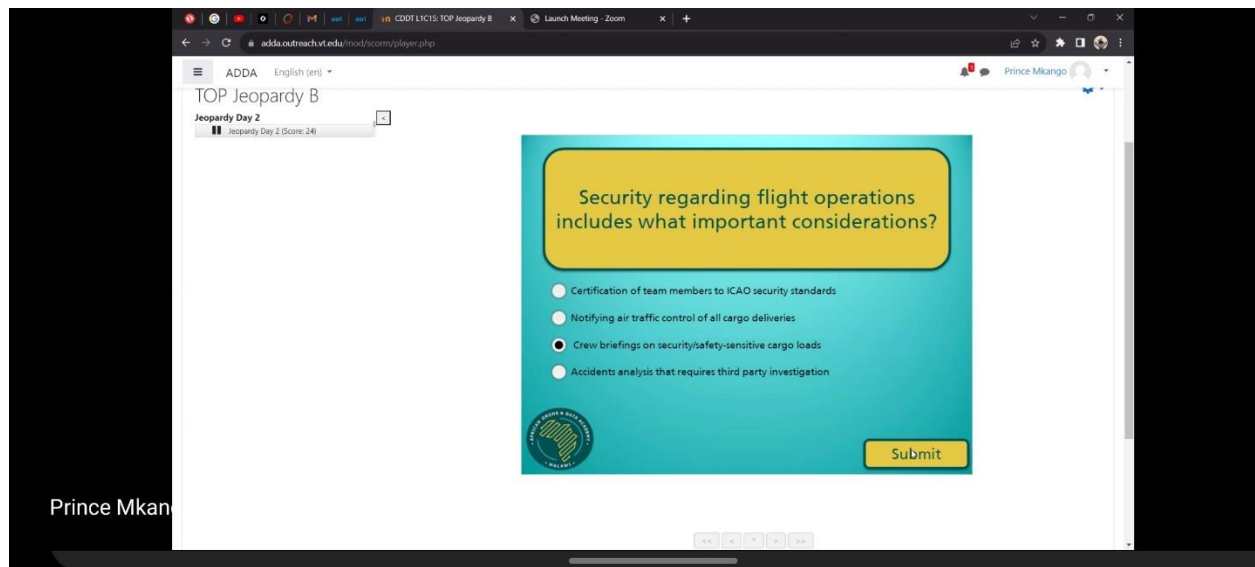

If a crew member allows their personal life to interfere with their responsibilities during the mission, they are a victim of this human factor error

## DISTRACTIONS

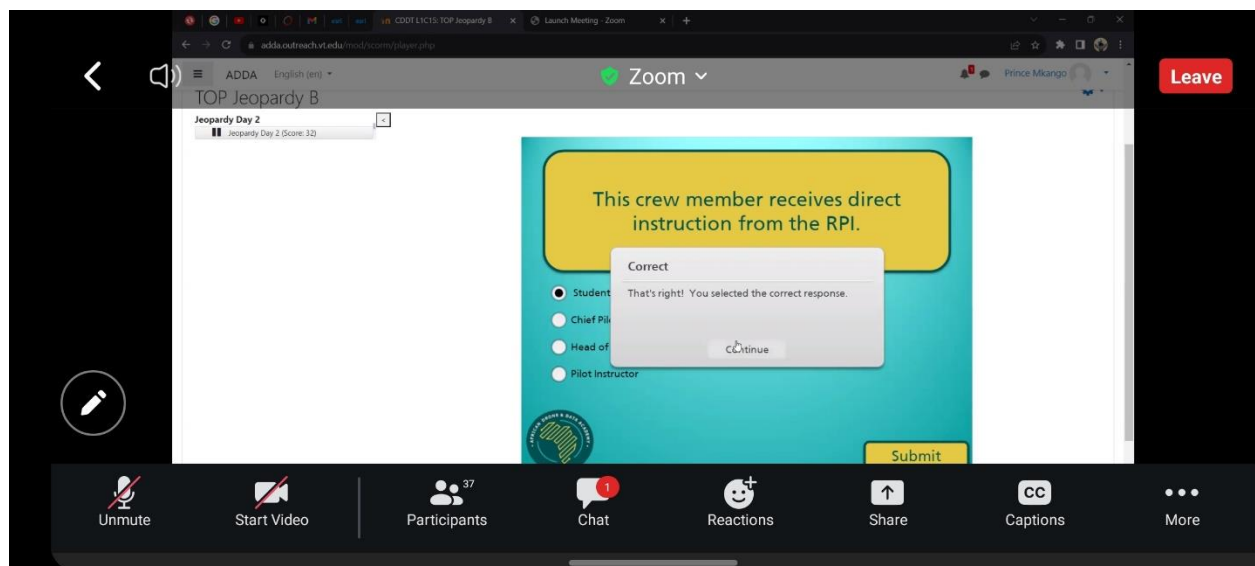

Security regarding flight operations includes what important considerations

## CREW BRIEFINGS ON SECURITY / SAFETY-SENSITIVE CARGP LOADS

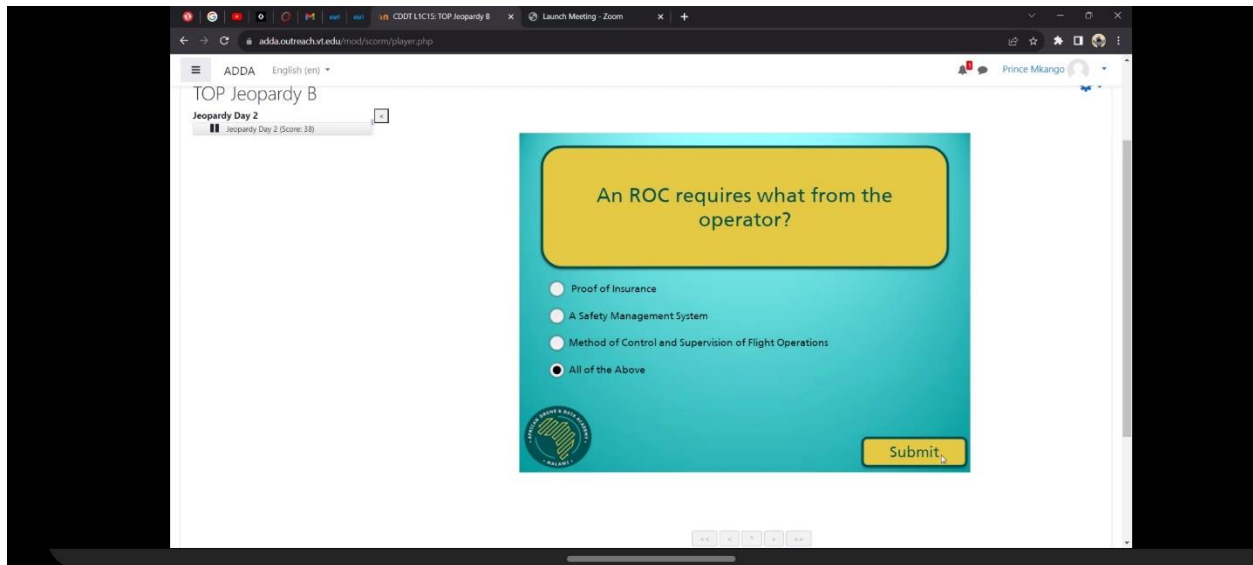

This crew member receives direct instruction from th RPI

**STUDENT PILOT**

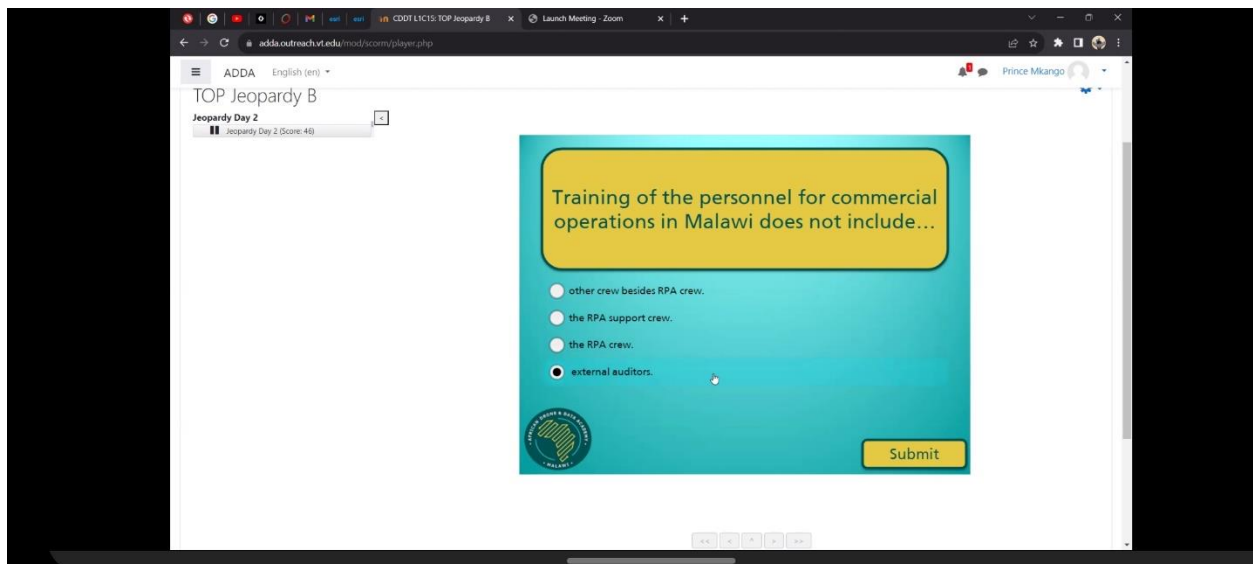

An ROC requires what from the Operator

**ALL OF THE ABOVE**

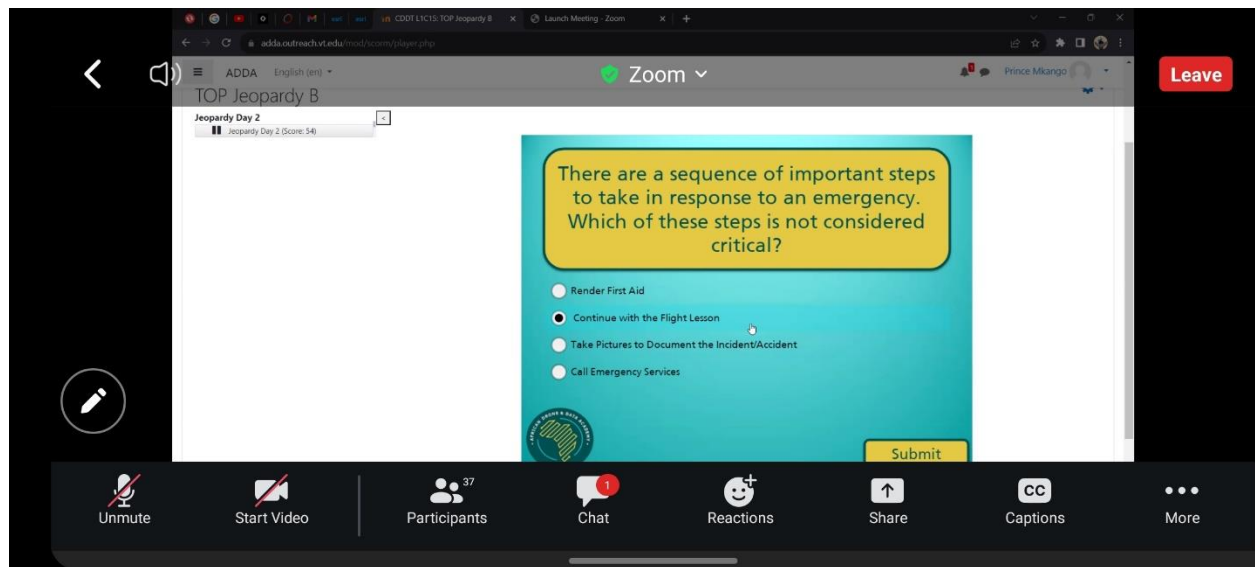

Training of the personnel for commercial operations in Malawi does not include

**EXTERNAL AUDITORS**

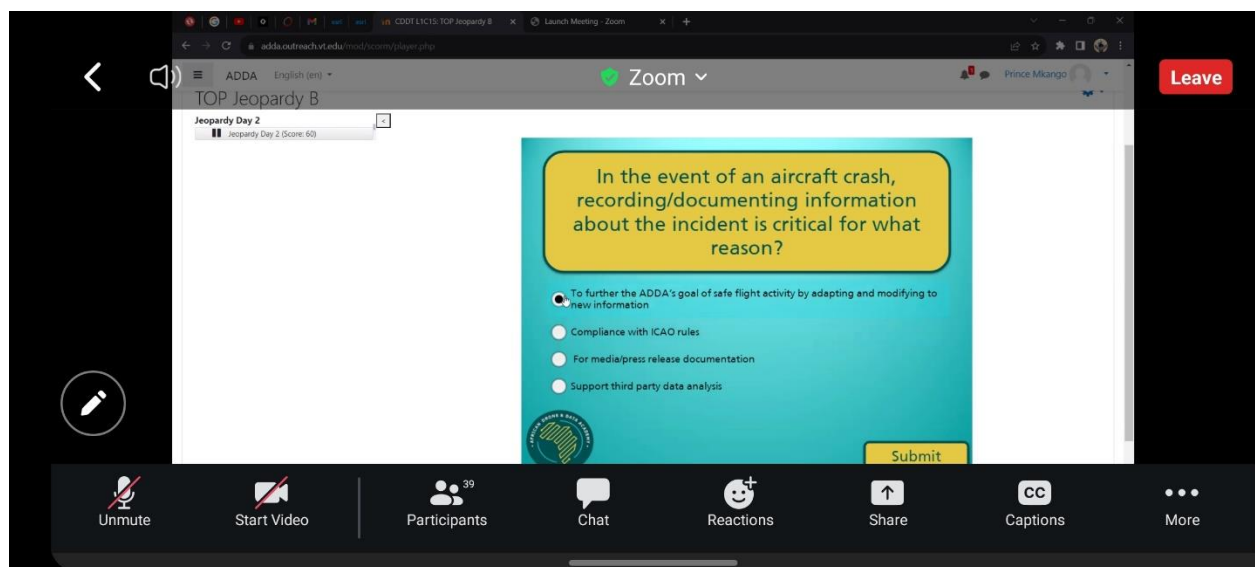

There are a sequence of important steps to take in response to an emergency. Which of these steps is not considered critical

**Continue with the flight**

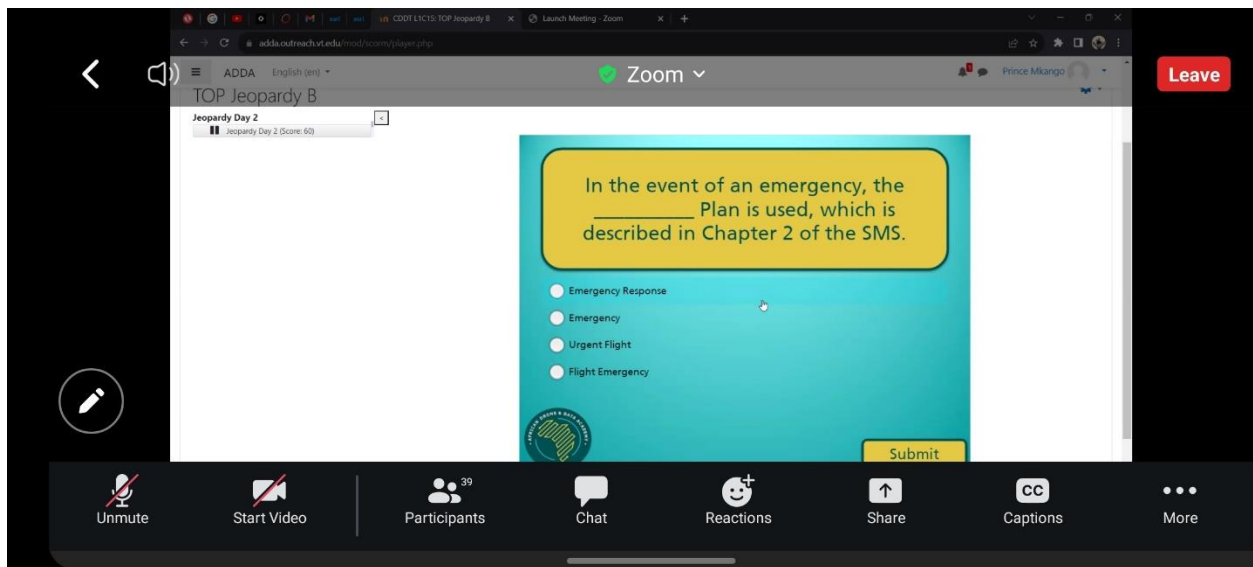

In the event of an aircraft crash recording/documenting information about the incident is critical for what reason

**TO FURTHER THE ADDA'S GOAL OF SAFE FLIGHT ACTIVITIES BY ADAPTING AND MODIFYING TO NEW INFORMATION**

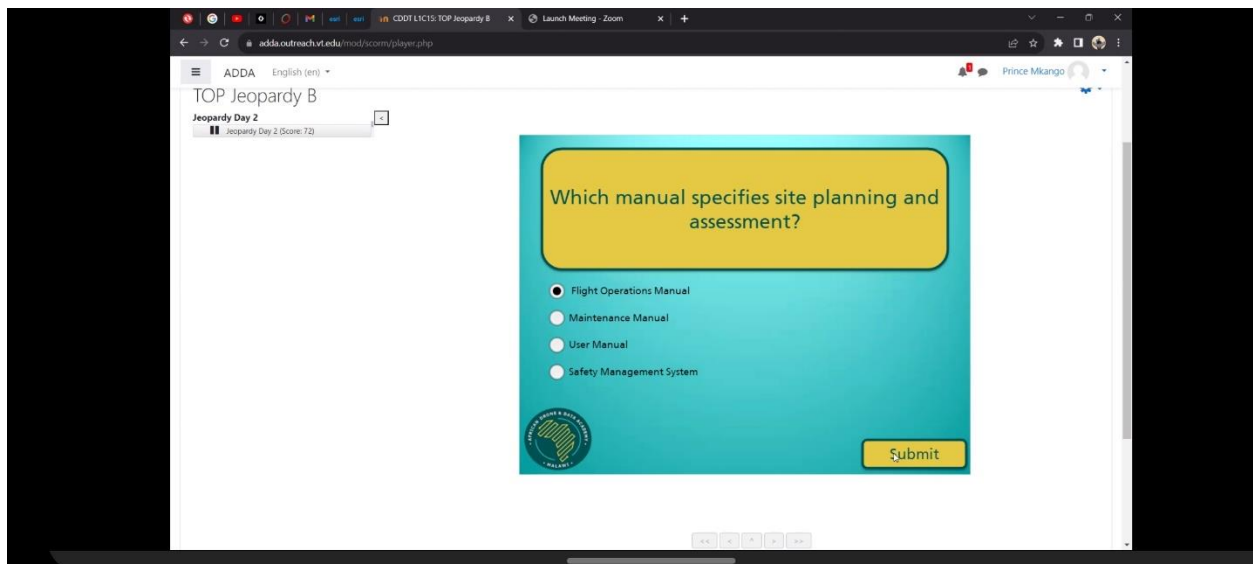

In the event of an emergency , the ----- plan is used , which is described in chapter 2 of the SMS

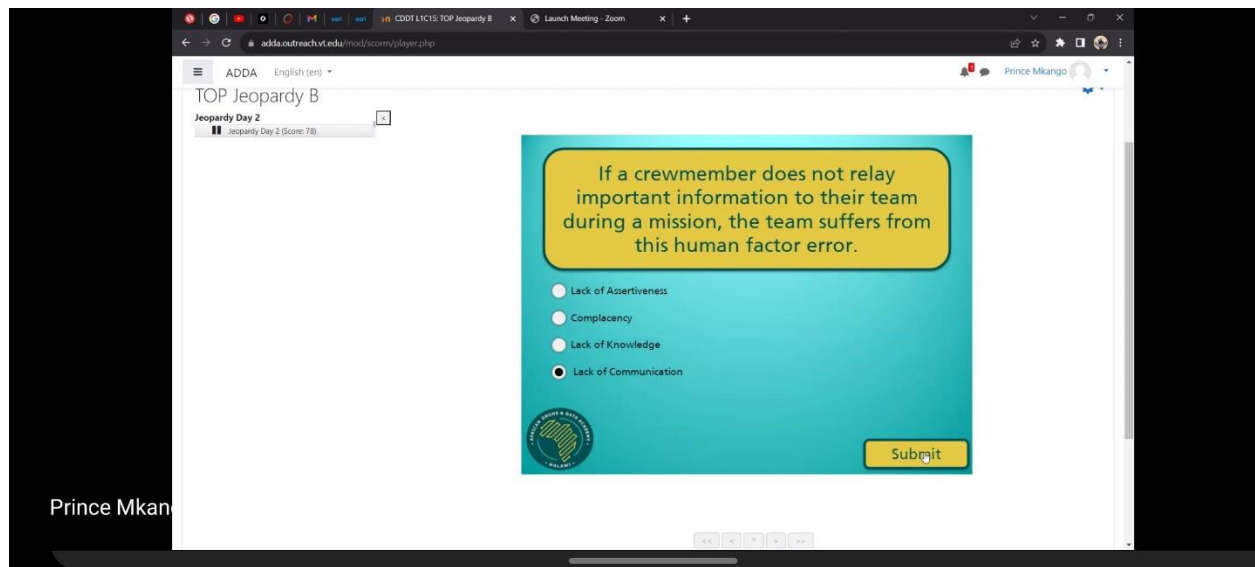

Which manual specifies site planning and assessment

## FLIGHT OPERATIONS MANUAL

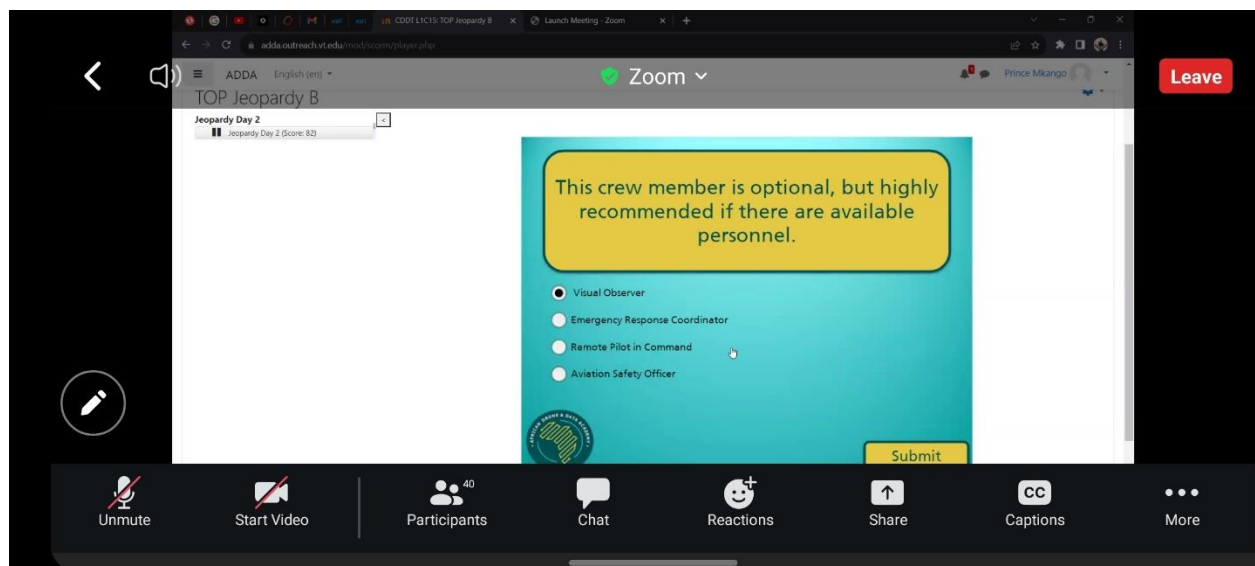

IF a crewmember does not relay important information to their team during a mission, the team suffers from this huma factor error

## Lack of communication

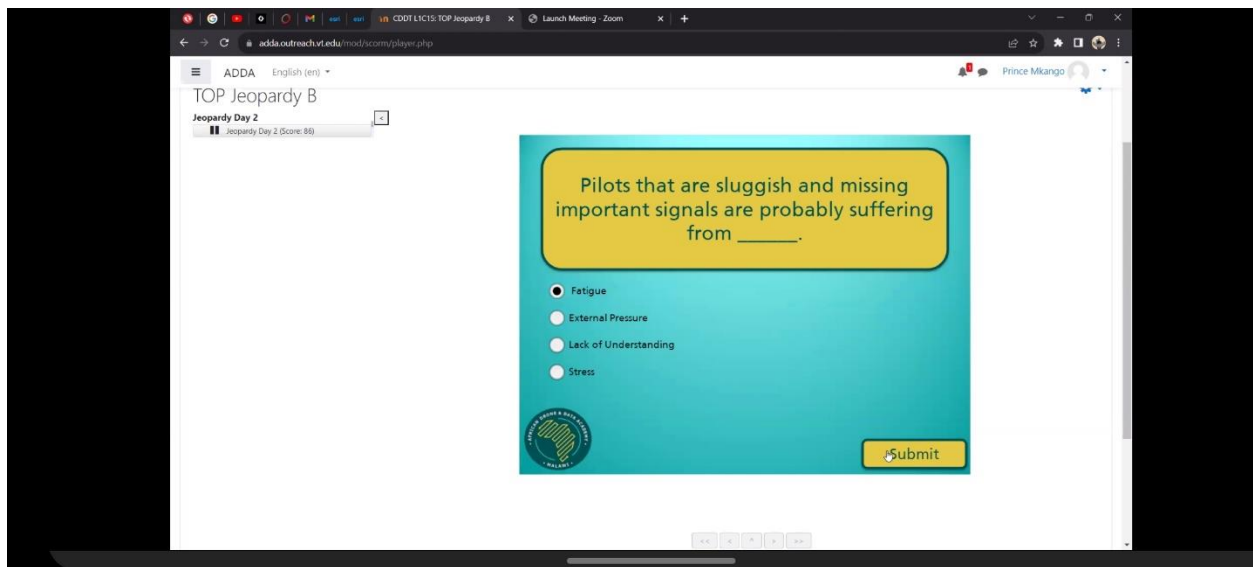

This crew member is optional , but highly recommended if there are available personnel.

### Visual observer

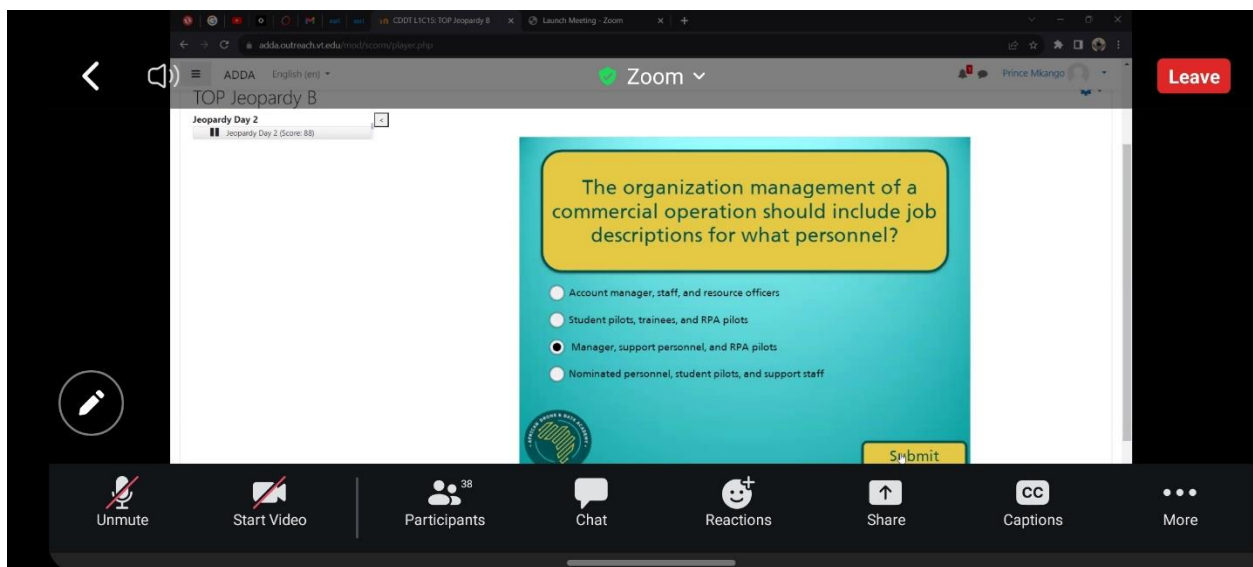

Pilots that are sluggish and missing important signals are probably suffering from-----?

### Fatigue

The organization management of a commercial operation should include job descriptions for what personnel

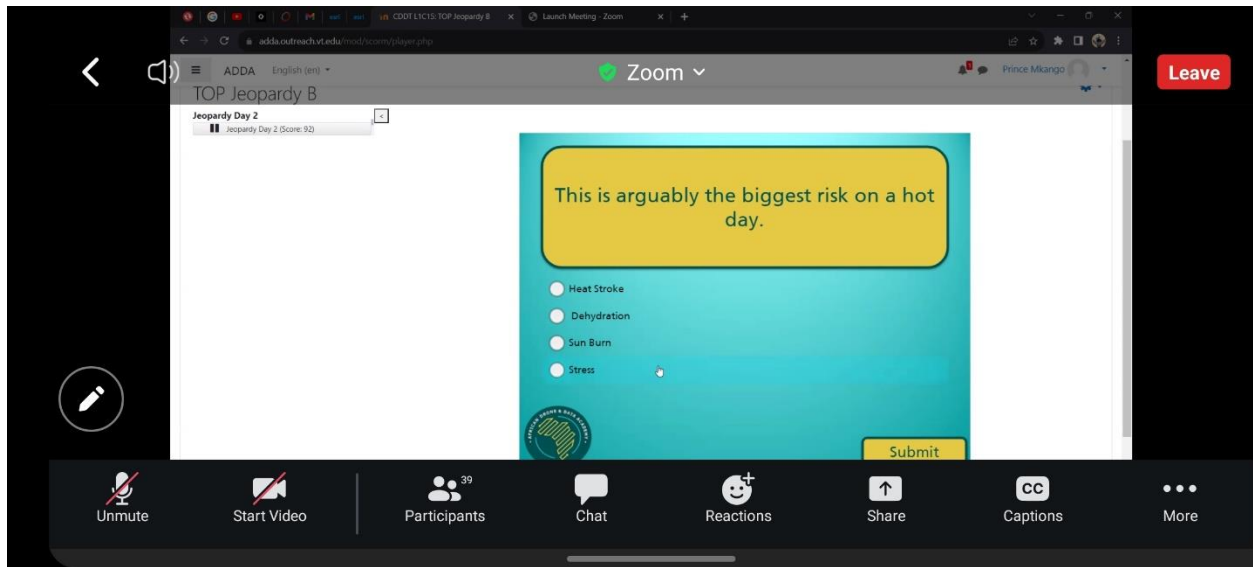

**Manager, support personnel and RPA pilots**

This is arguably the biggest risk on the hot day

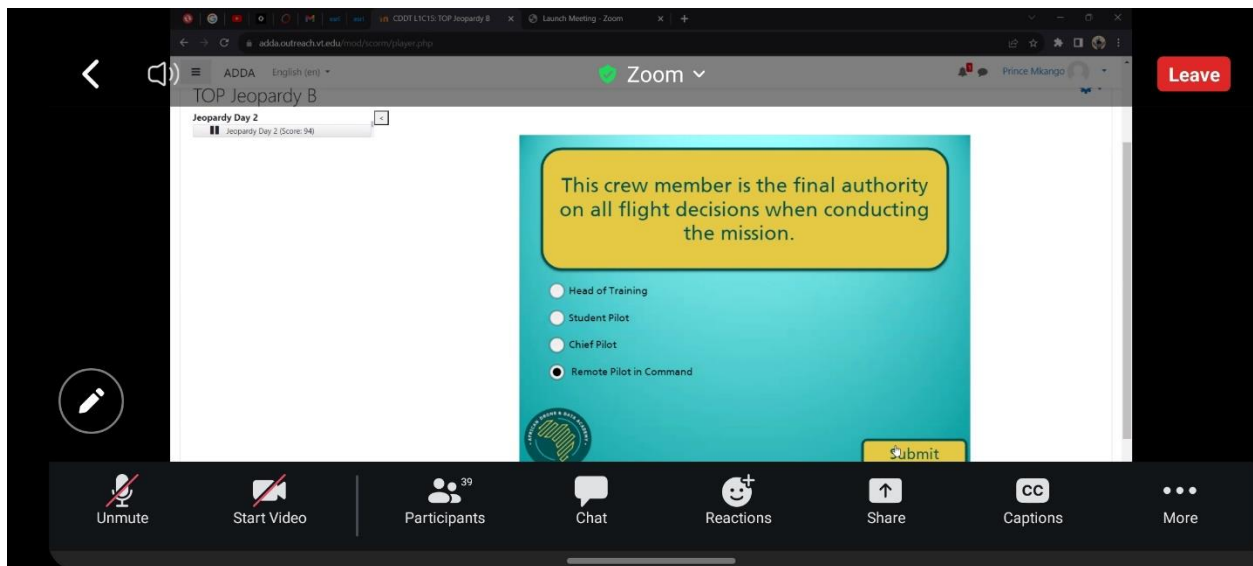

**DEHYDRATION**

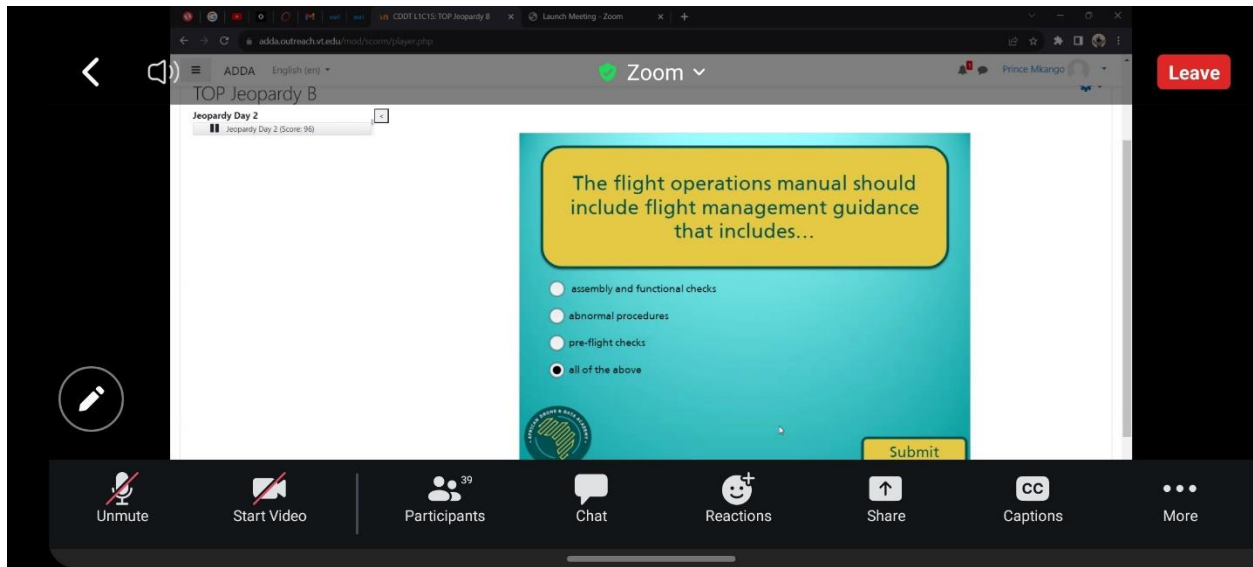

This crew member is the final authority on all flight decisions when conducting the mission

### REMOTE PILOT IN COMMAND

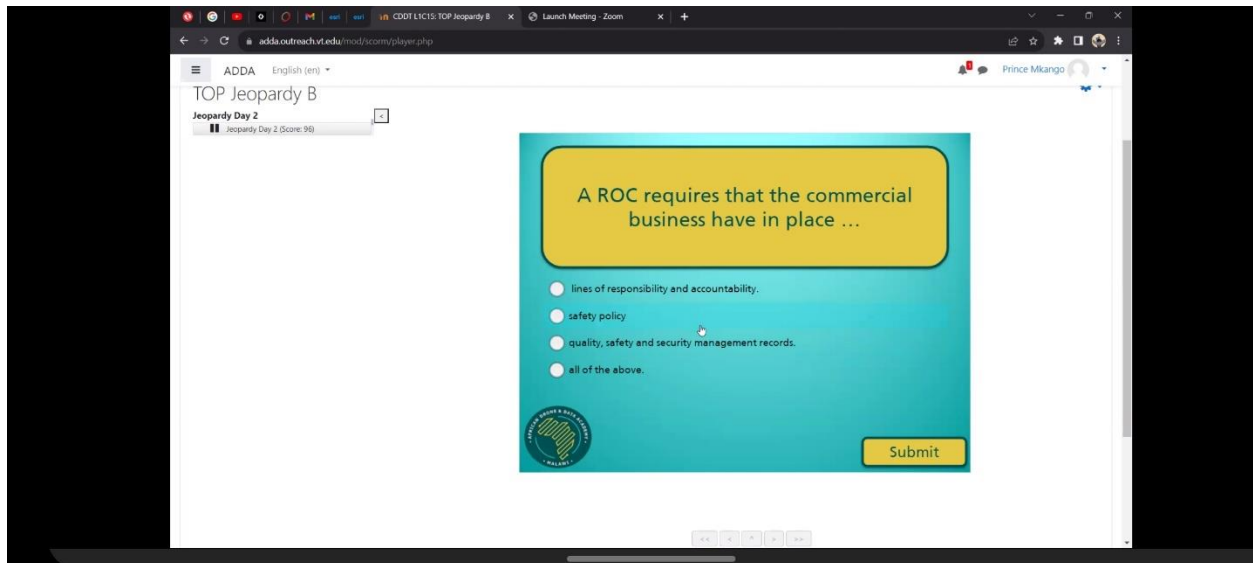

The flight operations manual should include flight management guidance that includes ----

**All of the above**

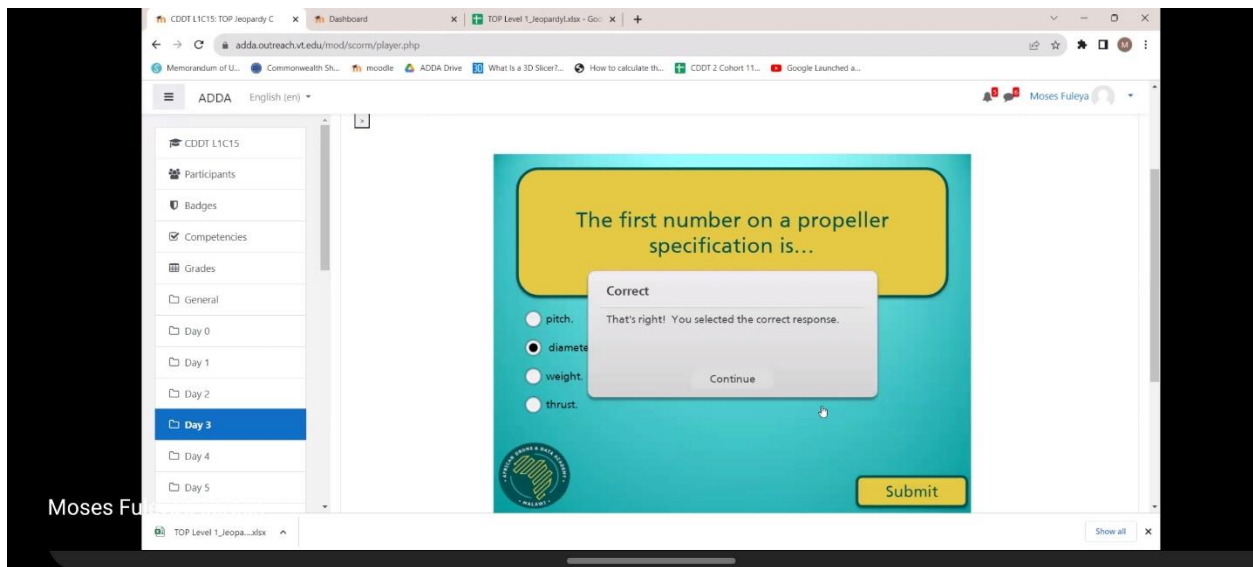

A ROC requires that the commercial business have in place ----

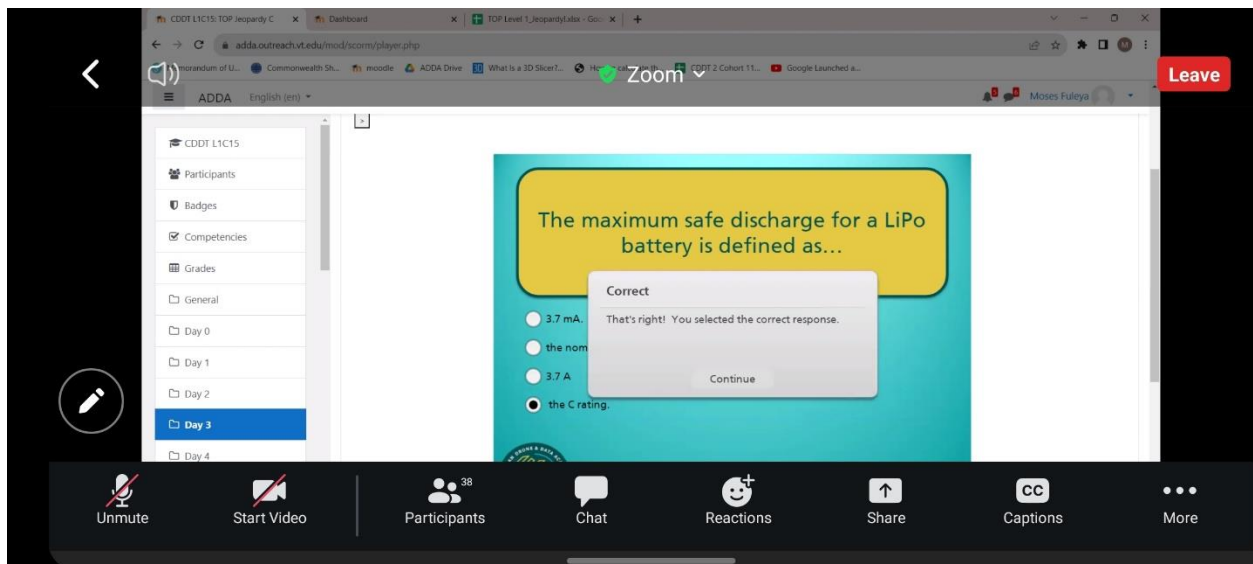

The first number on a propeller specification is...

**Diameter**

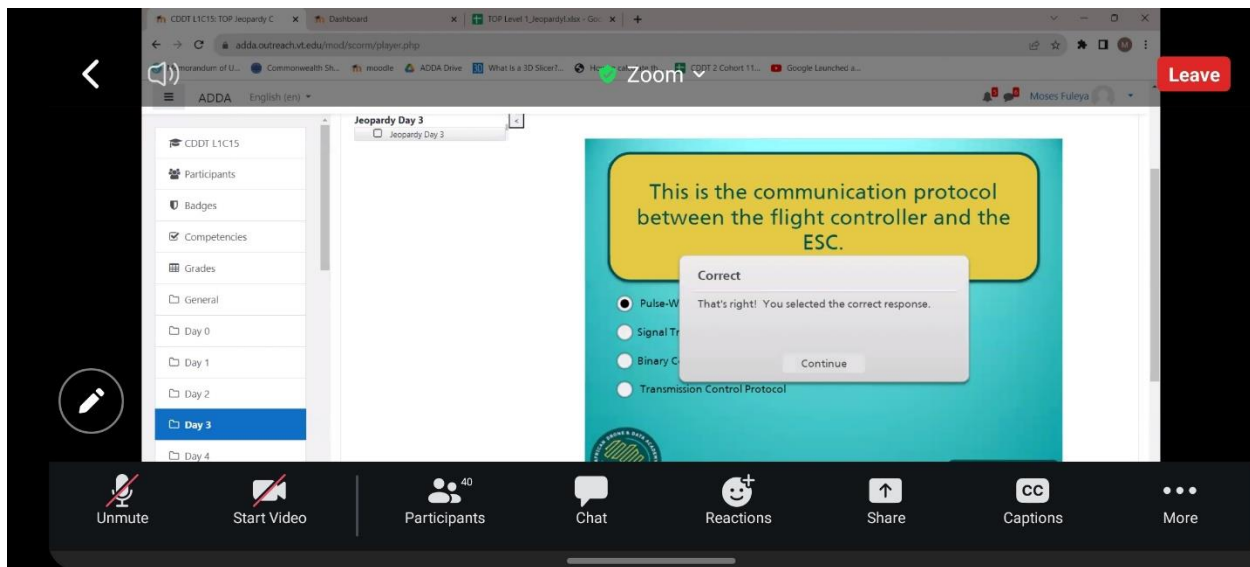

The maximum safe discharge for a LiPo battery is defined as...

**The C rating**

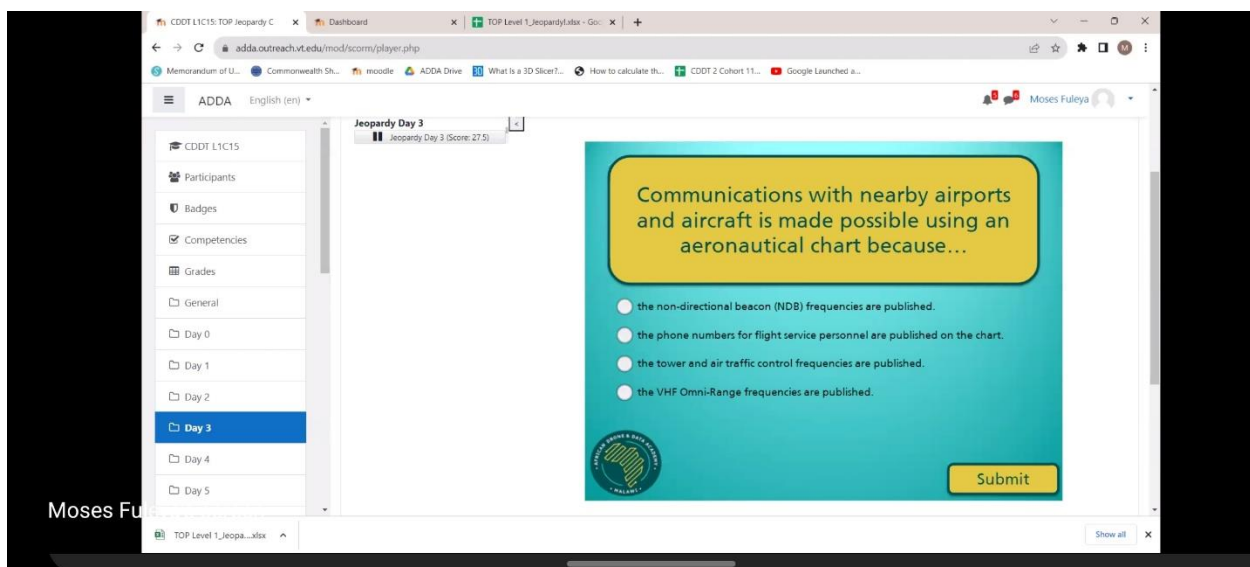

**This is the communication protocol between the flight controller and the ESC.**

**PULSE-WIDTH MODULATION**

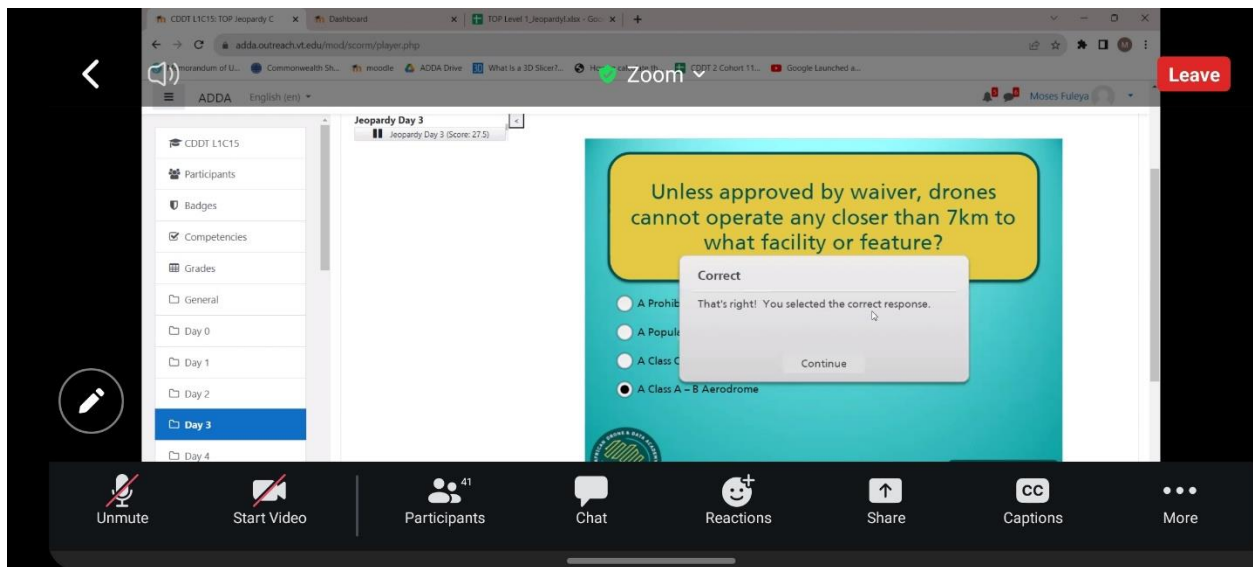

**Communications with nearby airports and aircraft is made possible using an aeronautical chart because...**

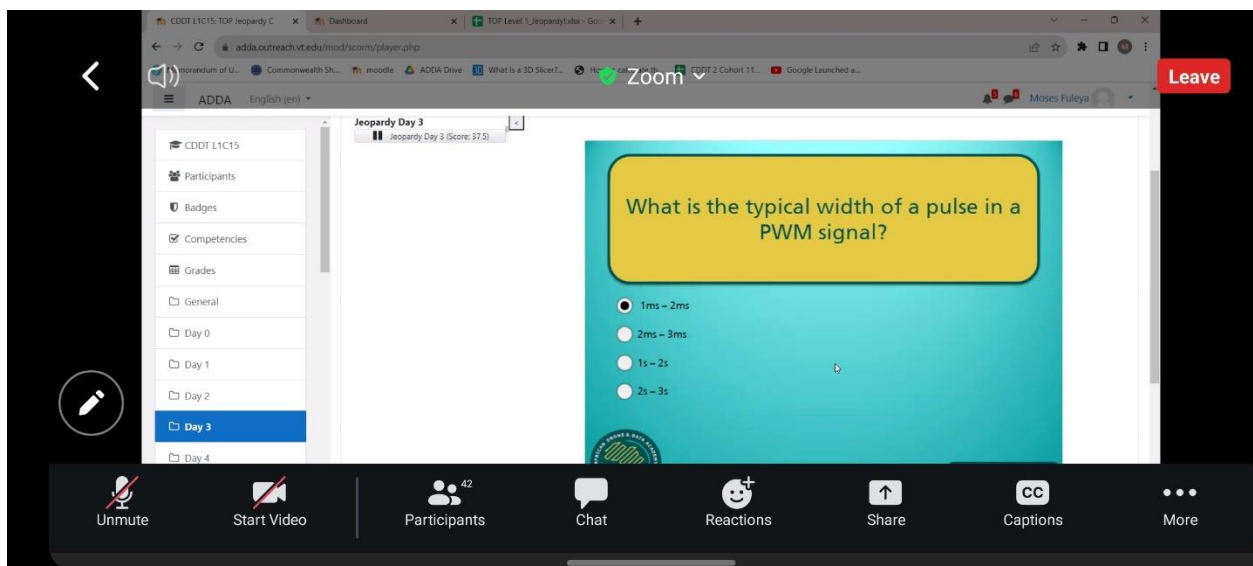

**Unless approved by waiver, drones cannot operate any closer than 7km to what facility or feature?**

**A CLASS A-B AERODROME**

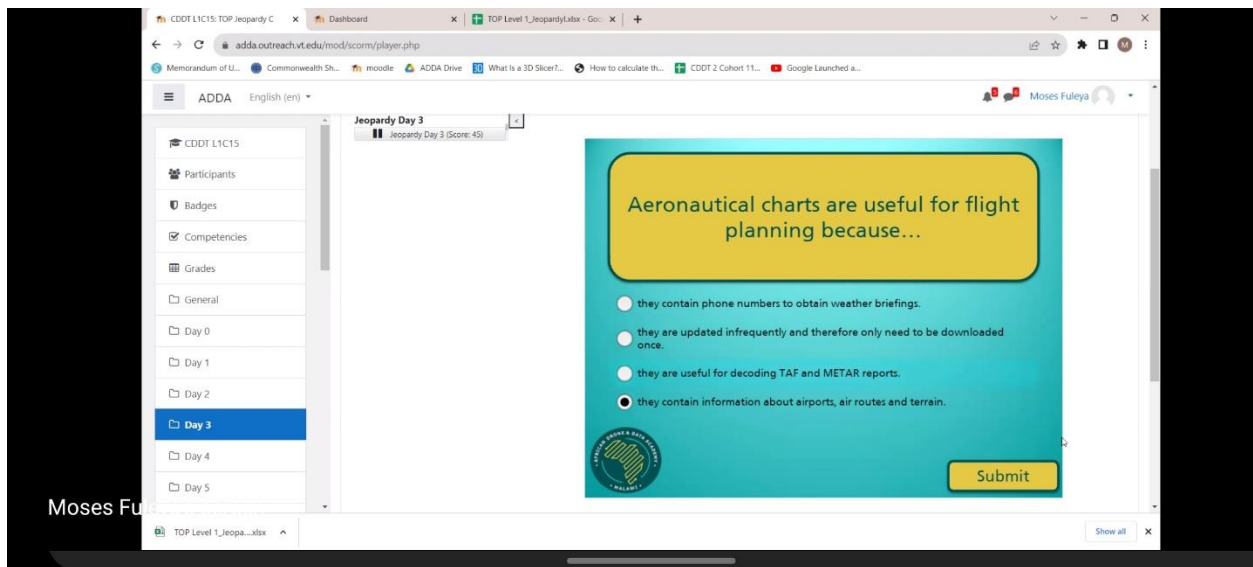

**What is the typical width of a pulse in a PWM signal?**

**1ms – 2 ms**

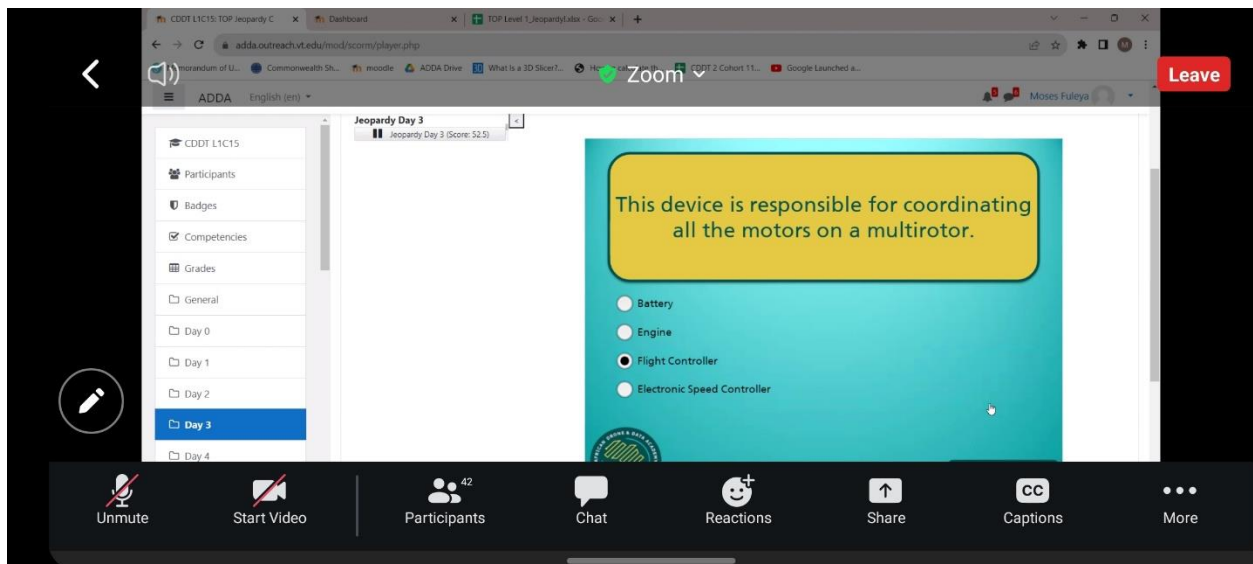

**Aeronautical charts are useful for flight planning because...**

**THEY CONTAIN INFORMATION ABOUT AIRPORTS , AIR ROUTES AND TERRAIN**

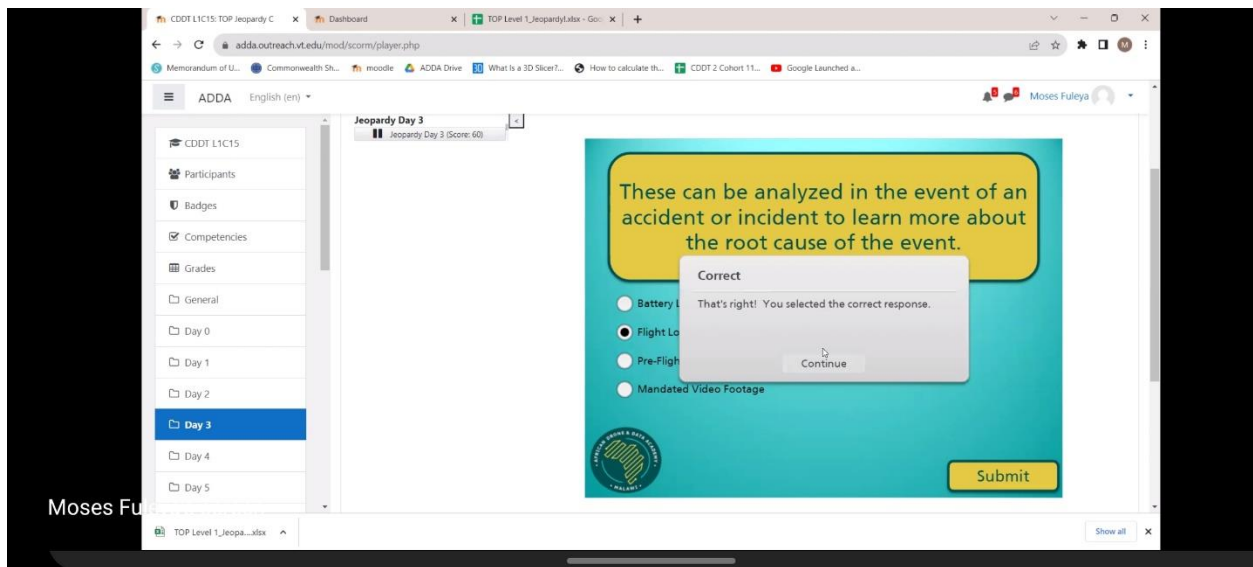

This device is responsible for coordinating all motors on a multirotor.

## FLIGHT CONTROLLER

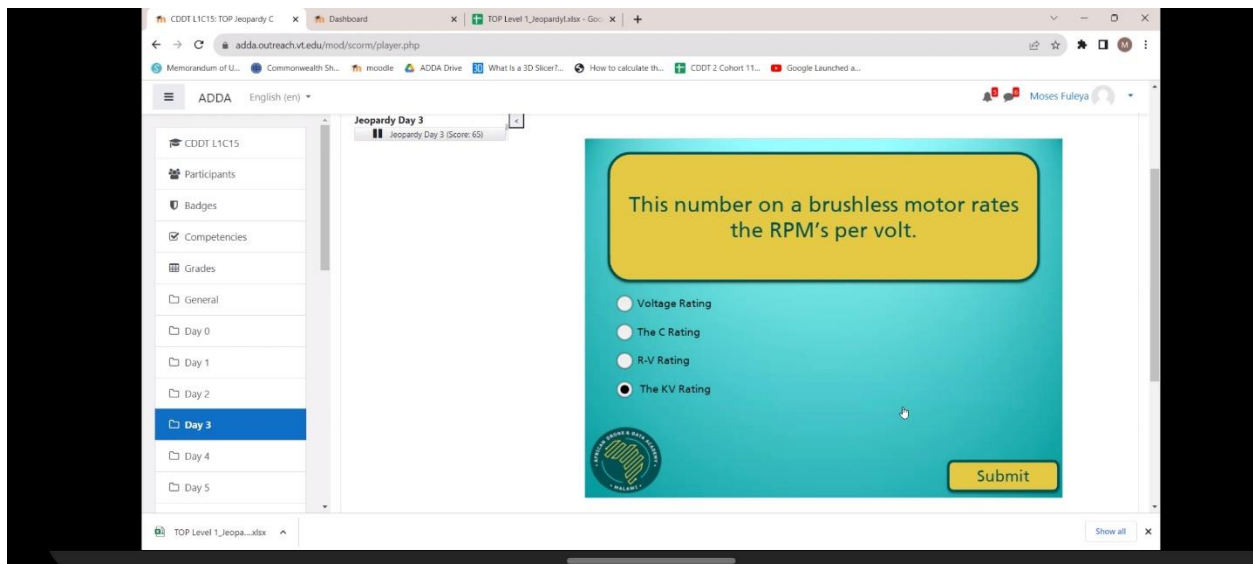

These can be analyzed in the event of an accident to learn more about the root cause of the event.

## FLIGHT LOGS

**This number on a brushless motor rates the RPM's per volt.**

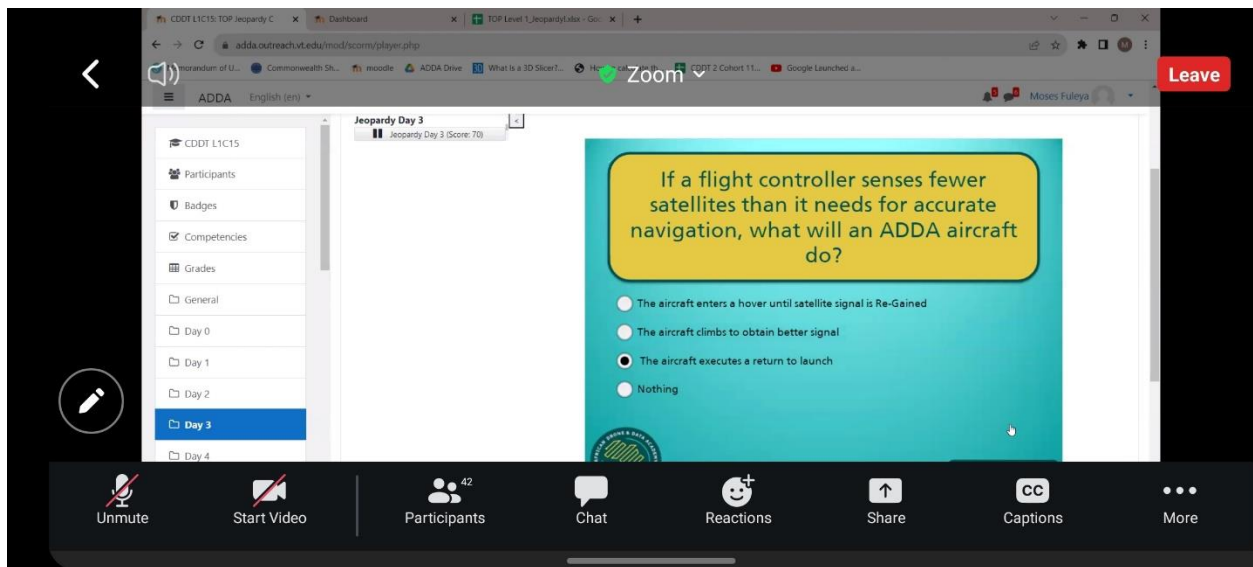

**THE KV RATING**

**If a flight controller senses fewer satellites than it needs for accurate navigation, what will an ADDA aircraft do?**

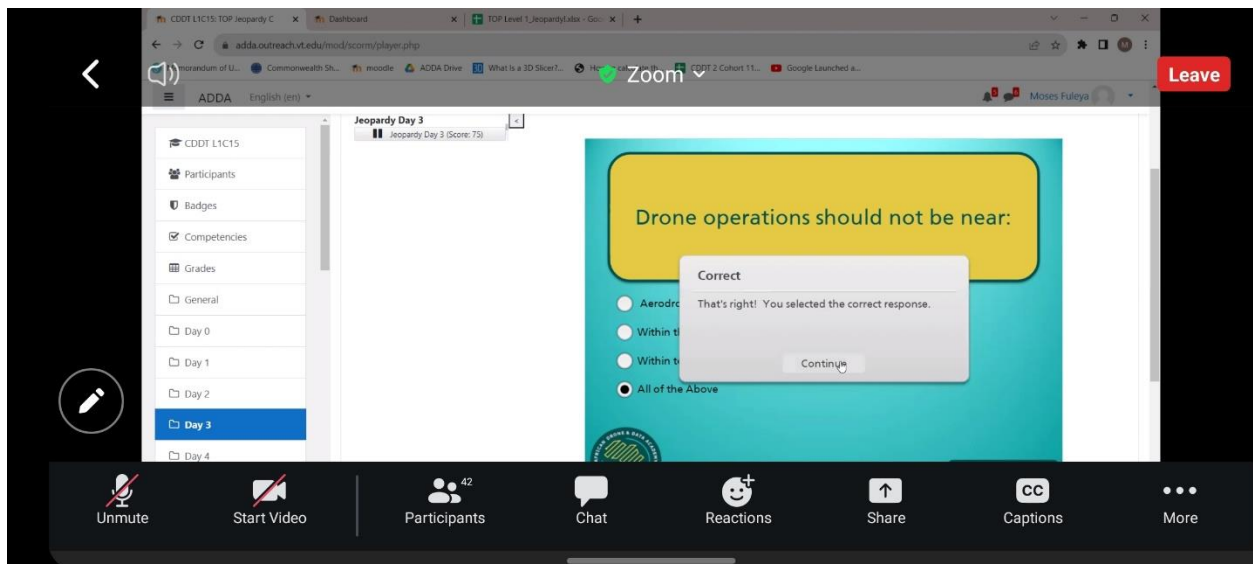

**THE AIRCRAFT EXECUTES A RETURN TO LAUNCH**

Drone operations should not be near:

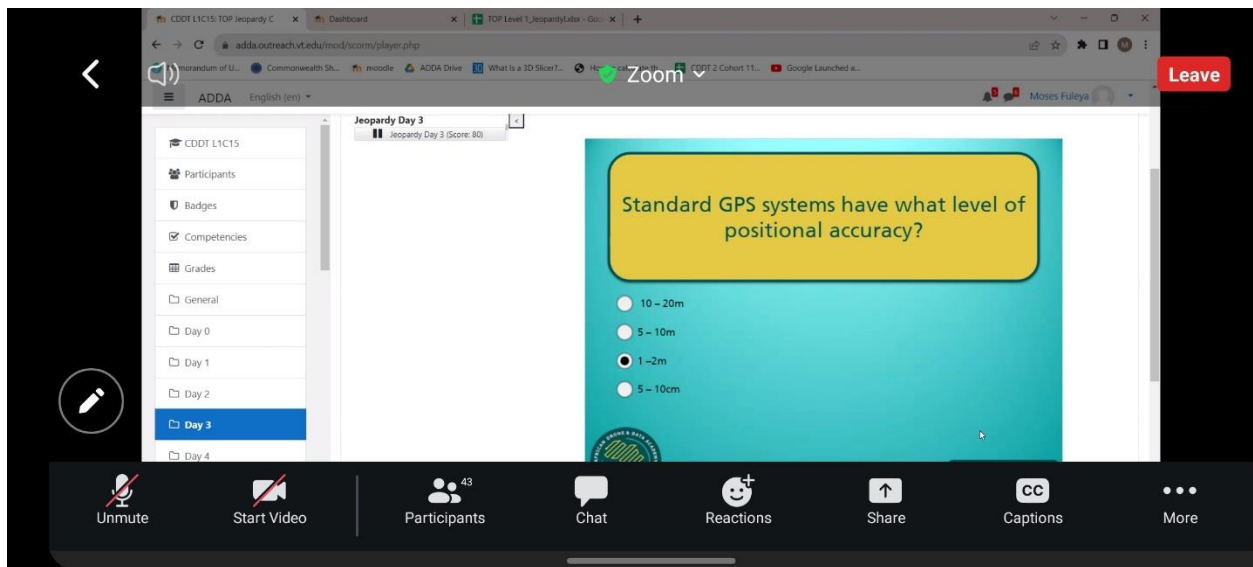

ALL OF THE ABOVE

Standard GPS systems have what level of positional accuracy?

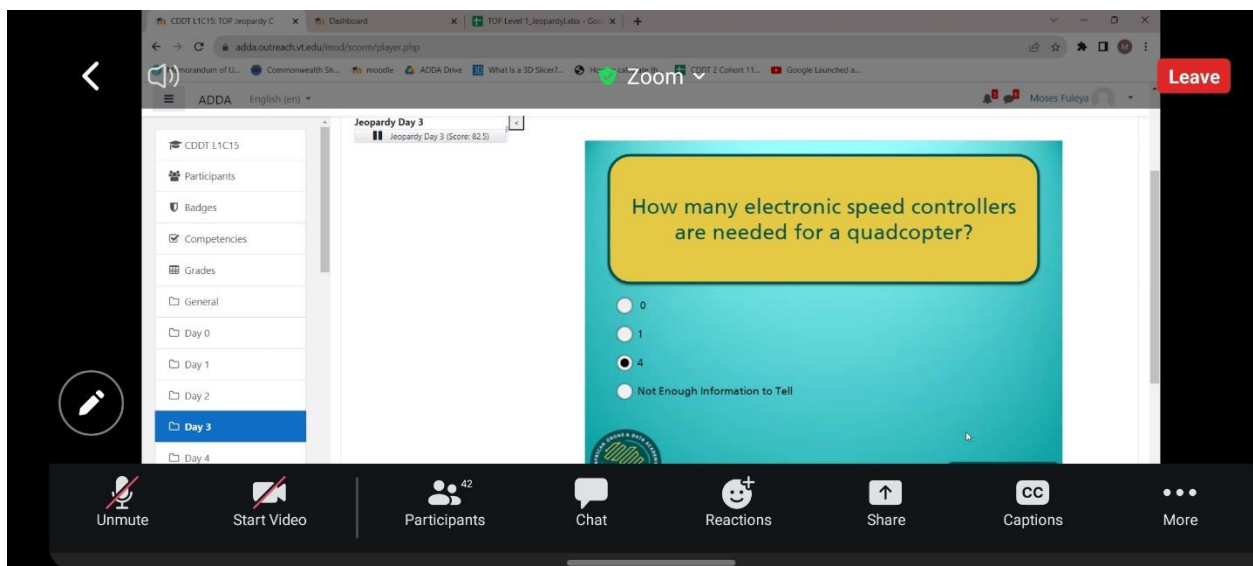

1 – 2 m

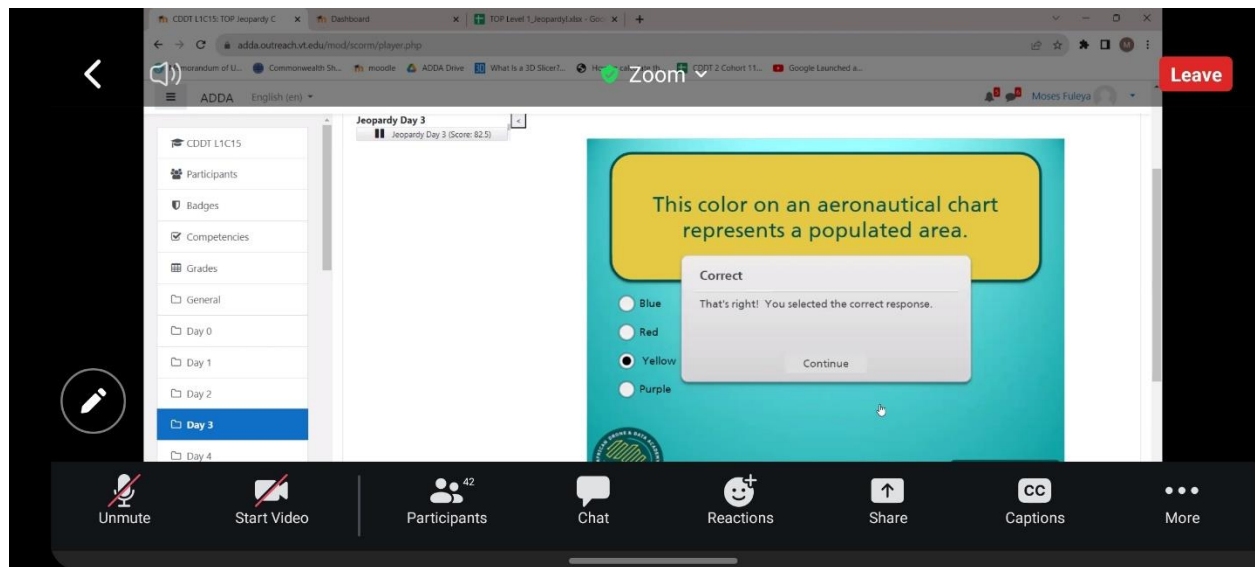

How many electronic speed controllers are needed for a quadcopter?

4

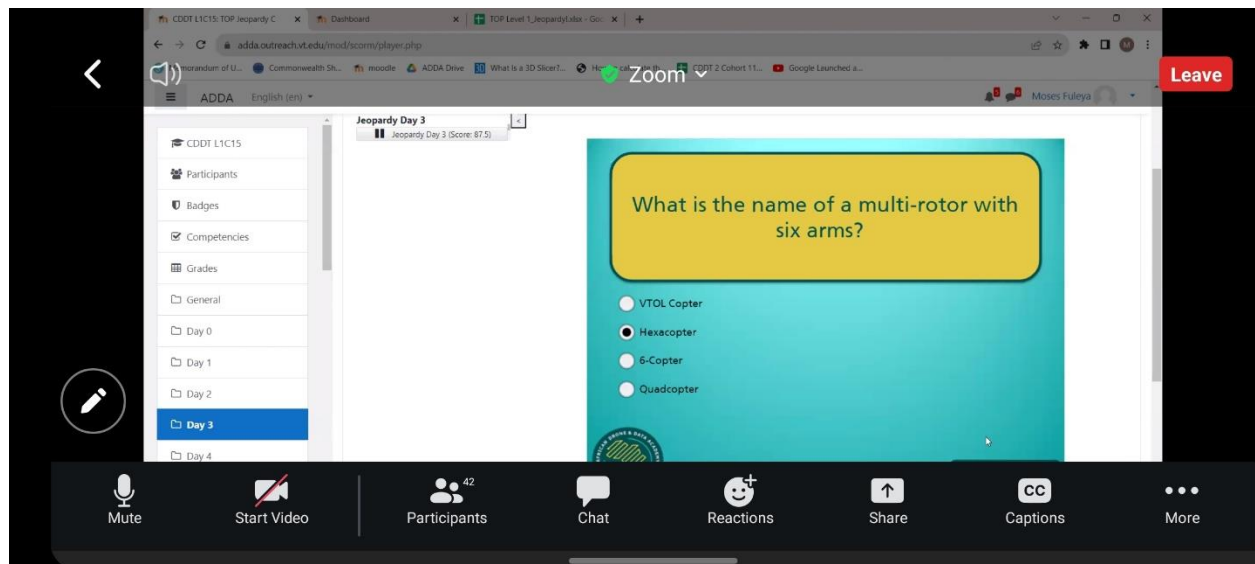

This color on an aeronautical chart represents a populated area.

YELLOW

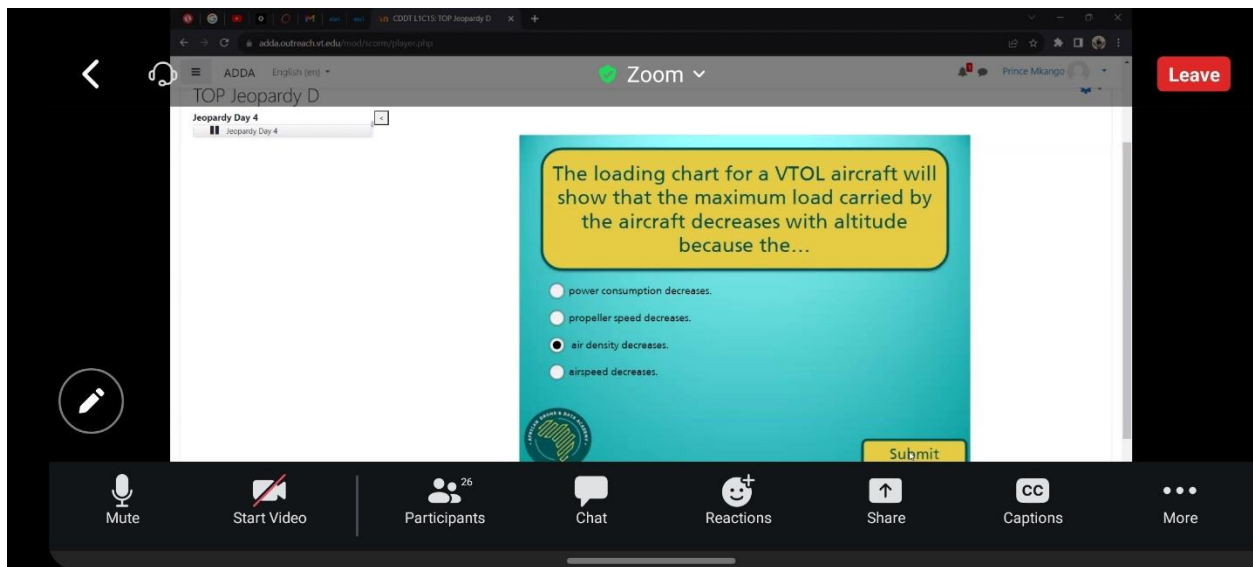

**What is the name of a multi-rotor with six arms?**

**HEXACOPTER**

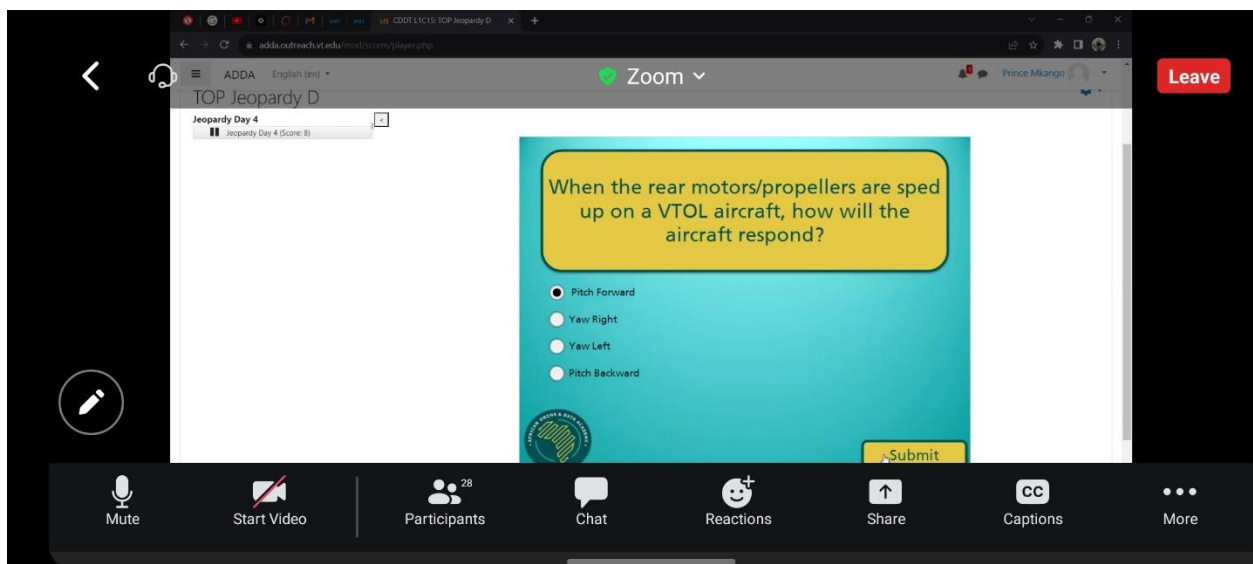

**The loading chart for a VTOL aircraft will show that the maximum load carried by the aircraft decreases with altitude because the**

**AIR DENSITY DECREASES**

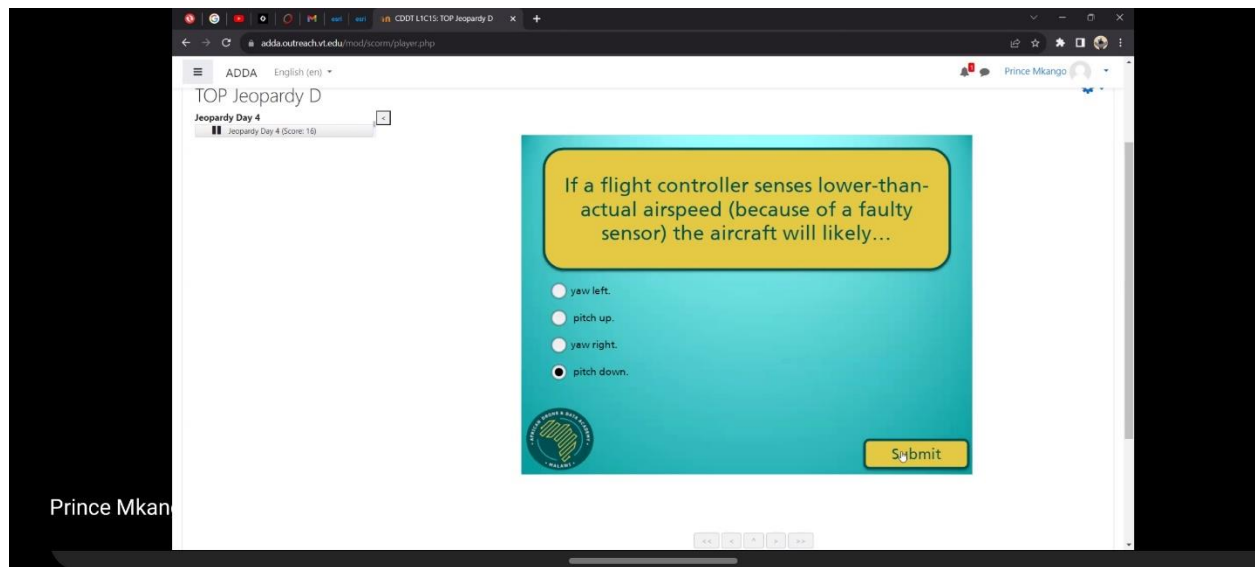

**When the rear motor/propellers are sped up on a VTOL aircraft, how will the aircraft respond?**

**PITCH FORWARD**

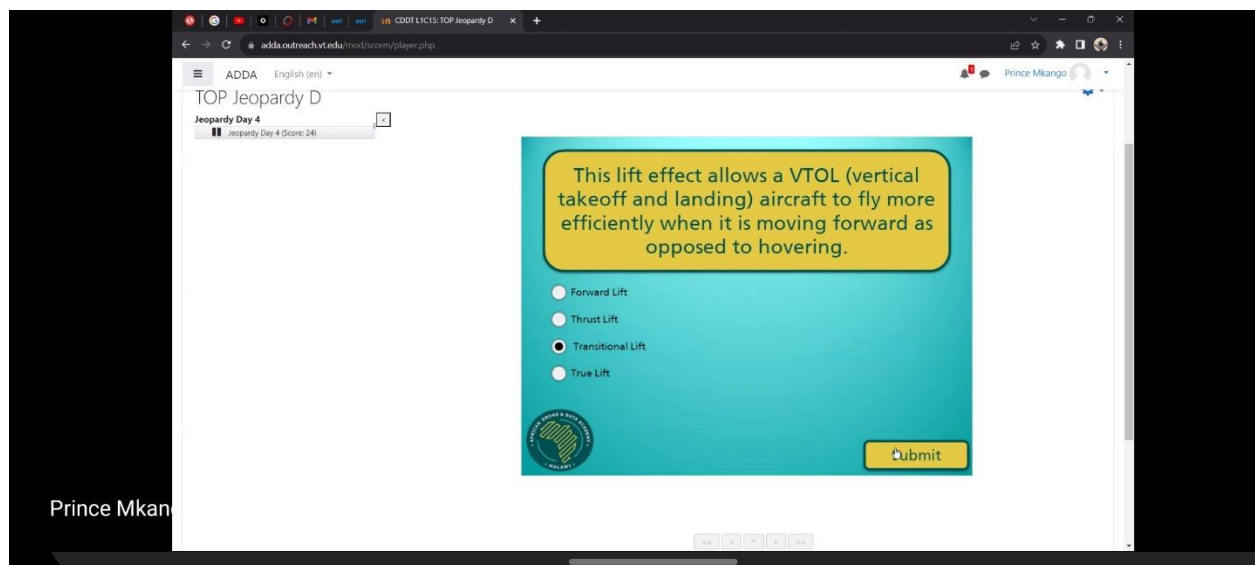

**If a flight controller senses lower than actual airspeed (because of a faulty sensor) the aircraft will likely...**

**PITCH DOWN**

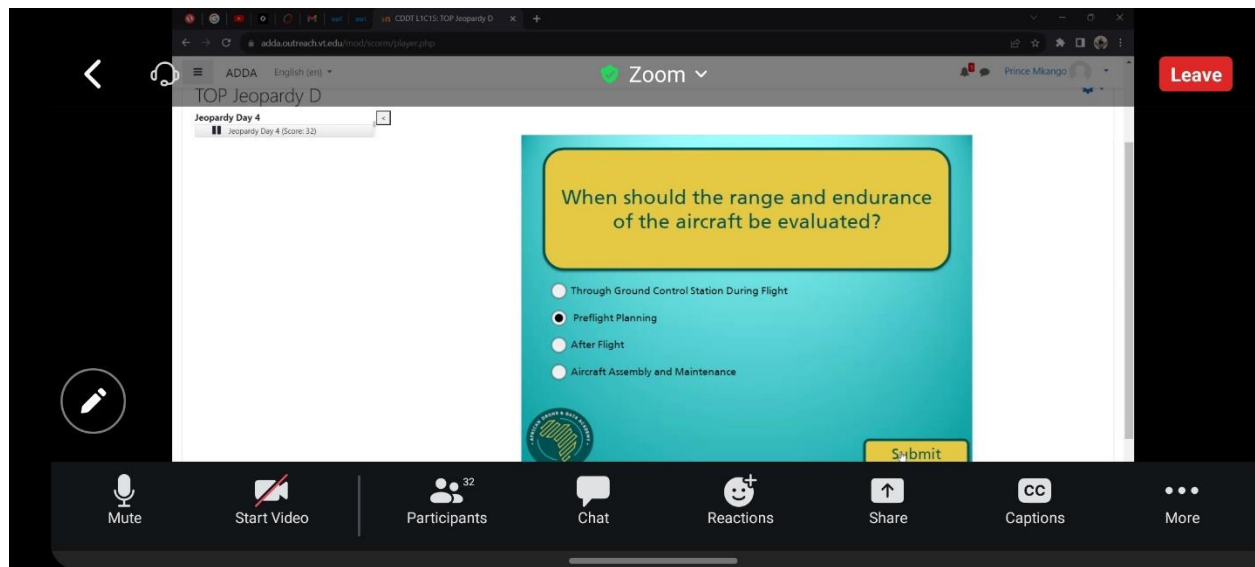

This lift effect allows a VTOL (vertical takeoff and landing) aircraft to fly more effecintly when it is moving forward as opposed to hovering.

## TRANSILATIONAL LIFT

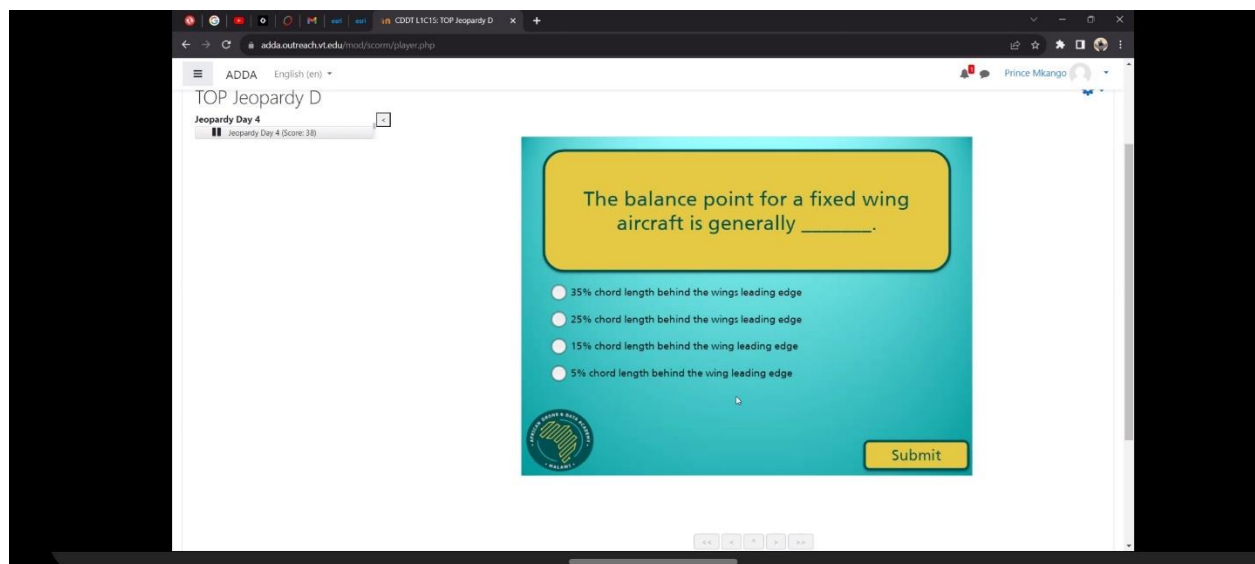

When should the range and endurance of the aircraft be evaluated?

## PREFLIGHT PLANNING

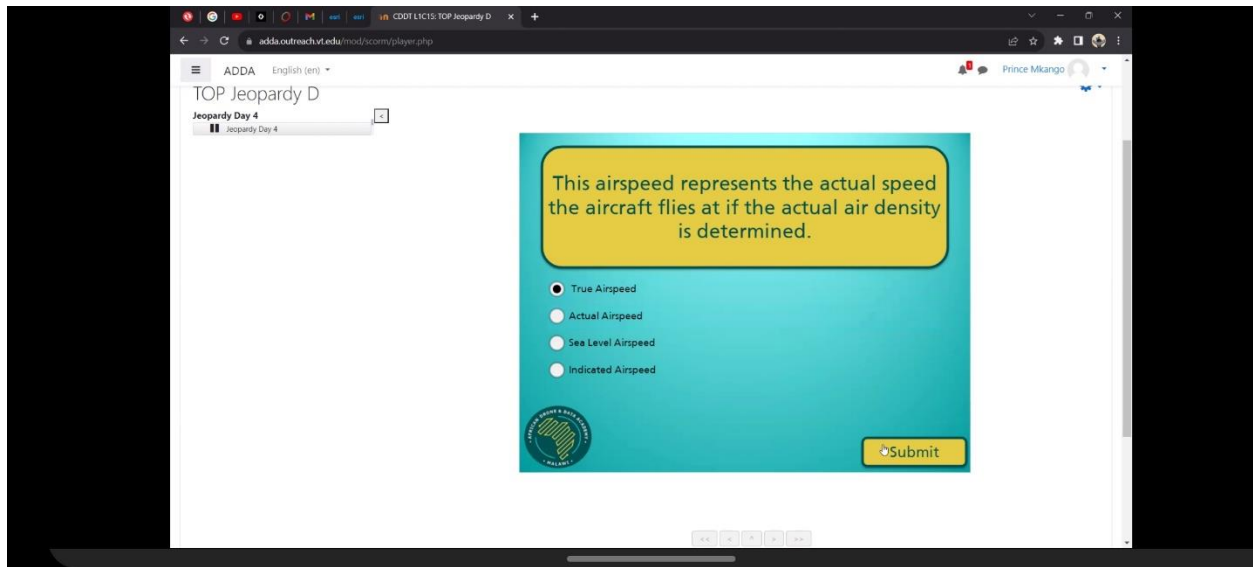

The balance point for a fixed wing aircraft is generally.....

25%CHORD LENGTH BEHIND THE WINGS LEADING EDGE

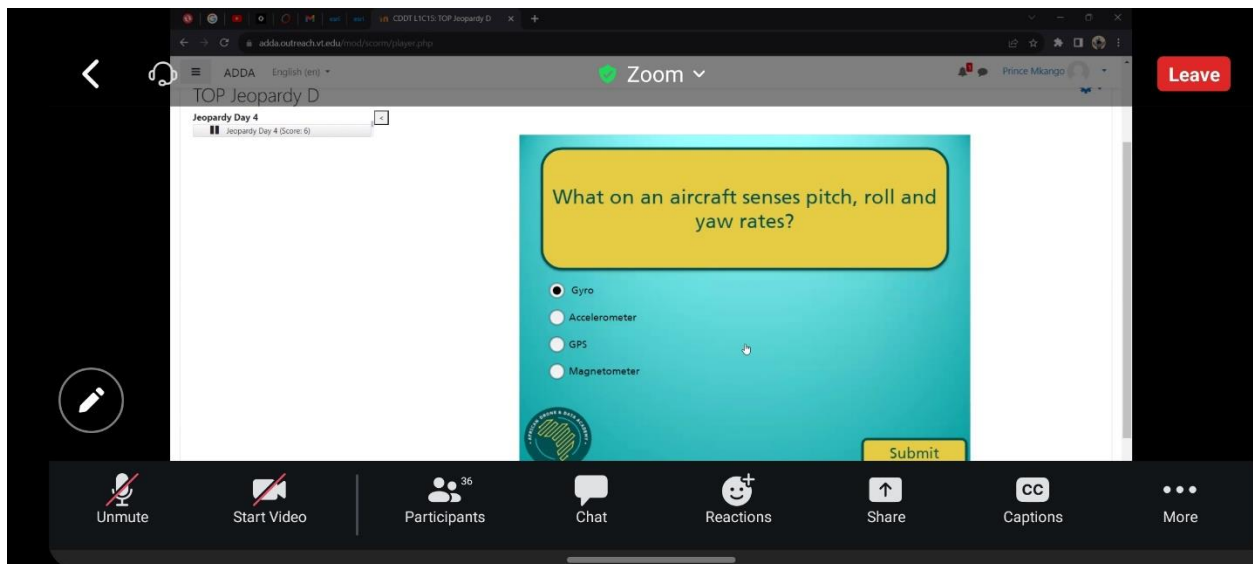

This airspeed represents the actual speed the aircraft flies at if the actual air density is determined.

TRUE AIRSPEED

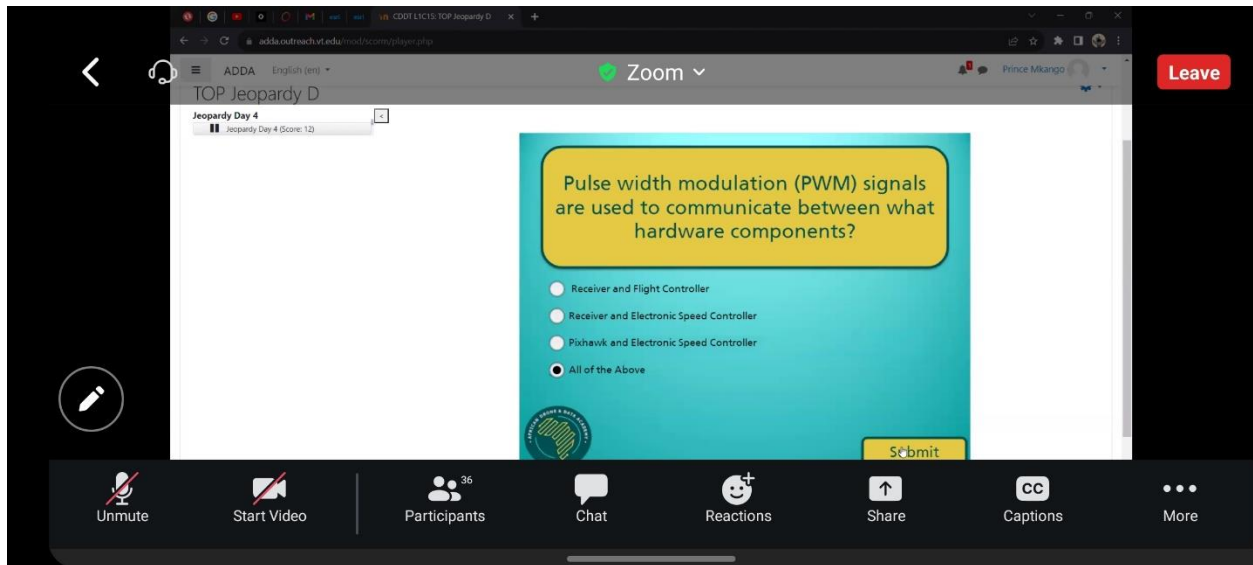

What on an aircraft senses pitch, roll and yaw rates?

GYRO

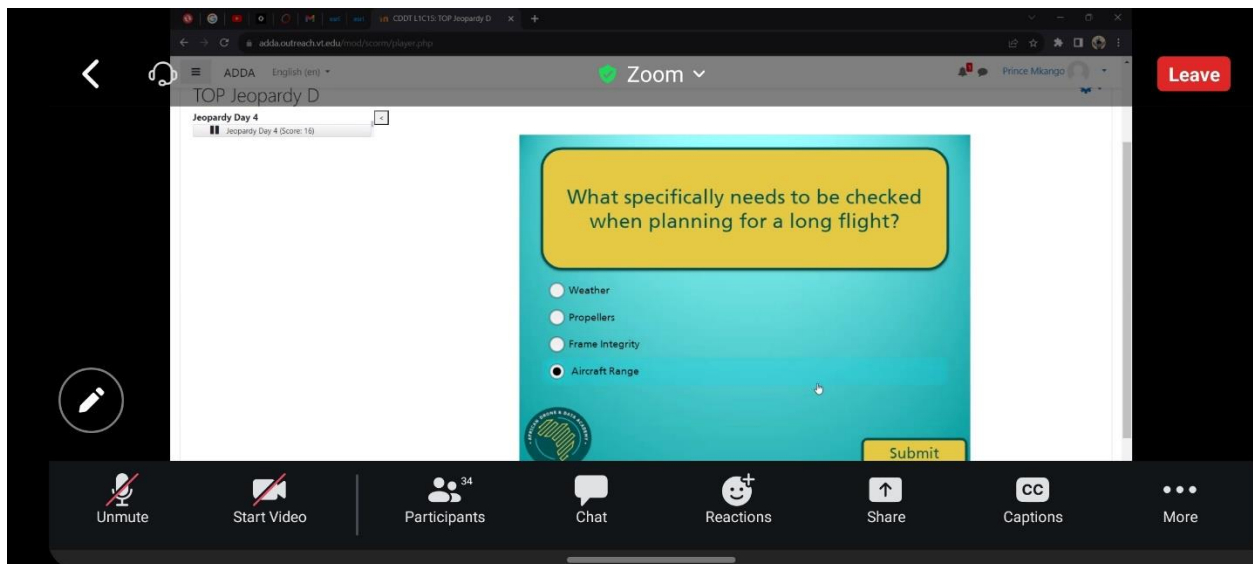

Pulse width modulation (PMWM) signals are used to communicate between what hardware components?

ALL OF THE ABOVE

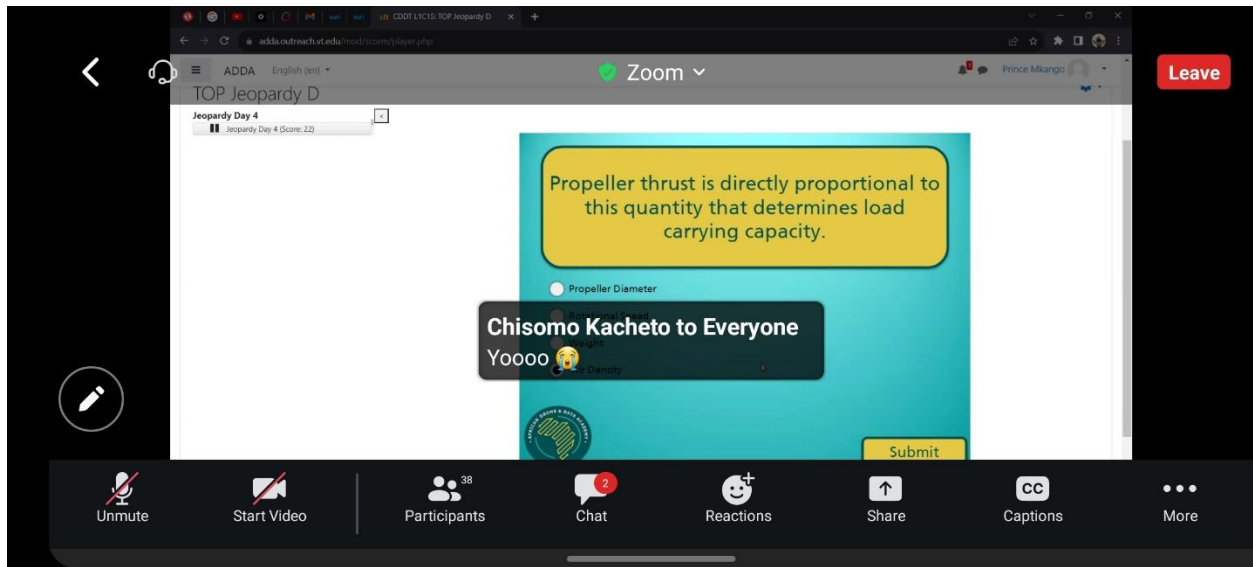

**What specifically needs to be checked when planning for a long flight?**

**AIRCRAFT RANGE**

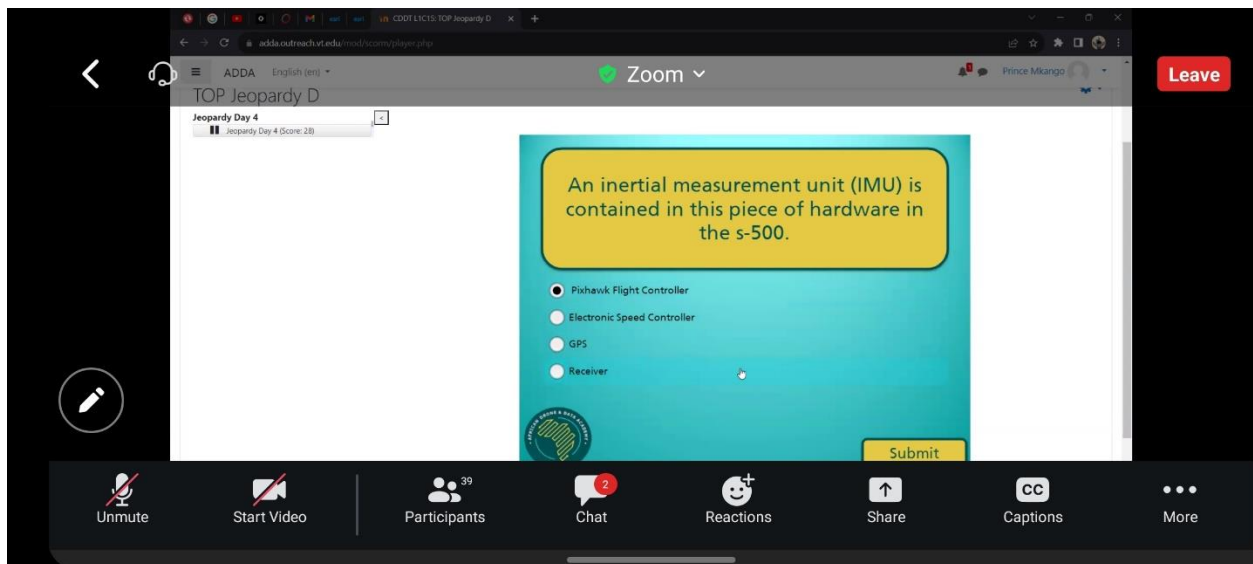

**Propeller thrust is directly proportional to this quantity that determines load carrying capacity.**

**AIR DENSITY**

An inertial measurement unit (IMU) is contained in this piece of hardware in the s-500.

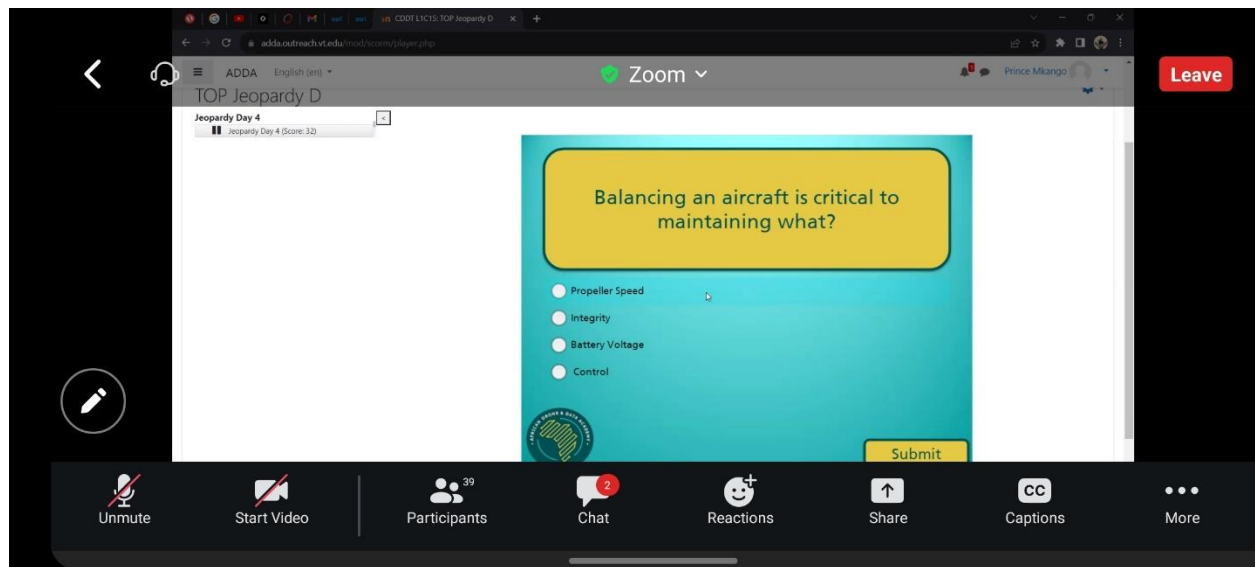

PIXHAWK FLIGHT CONTROLLER

BALANCING AN AIRCRAFT IS CRITICAL TO MAINTANING WHAT?

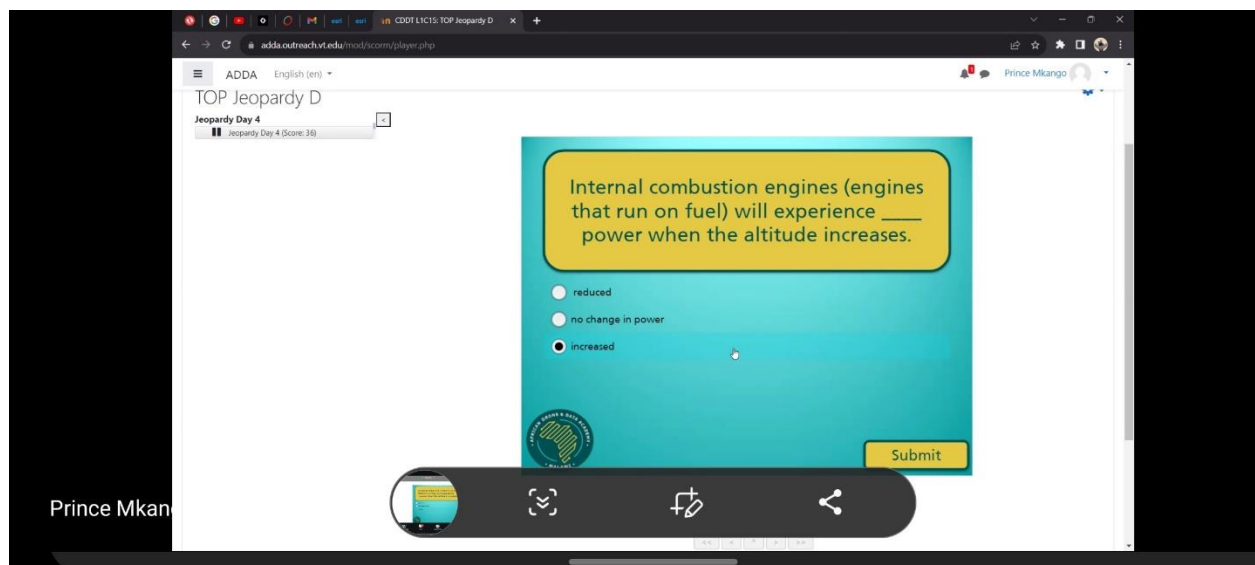

CONTROL

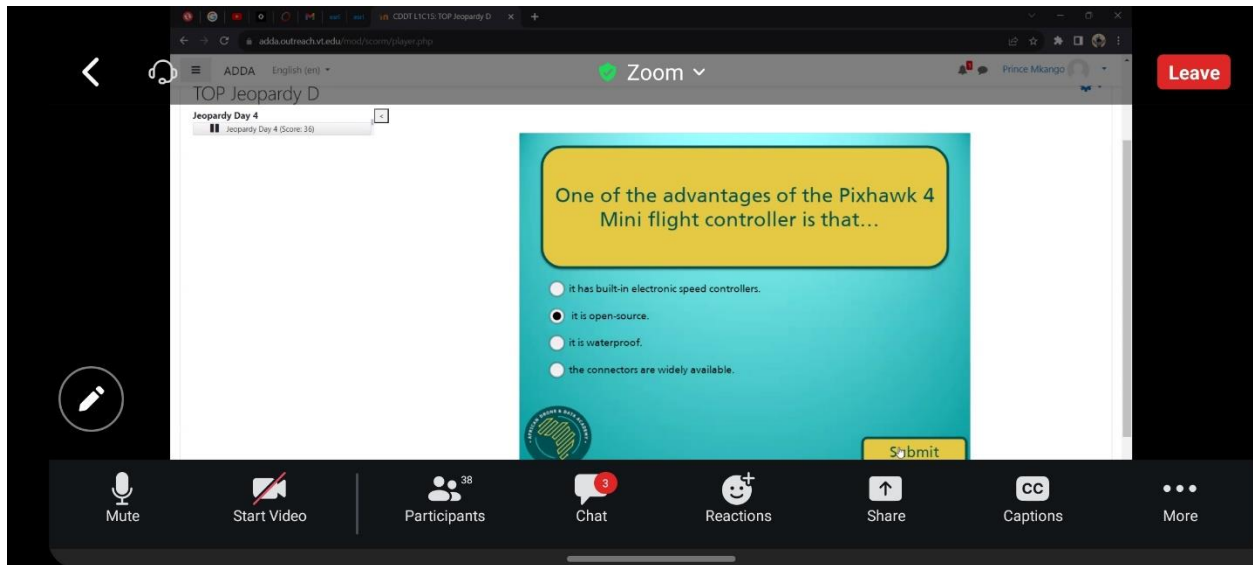

Internal combustion engines (engines that run on fuel) will experience ---- power when the altitude increases.

**REDUCED NOT INCREASED**

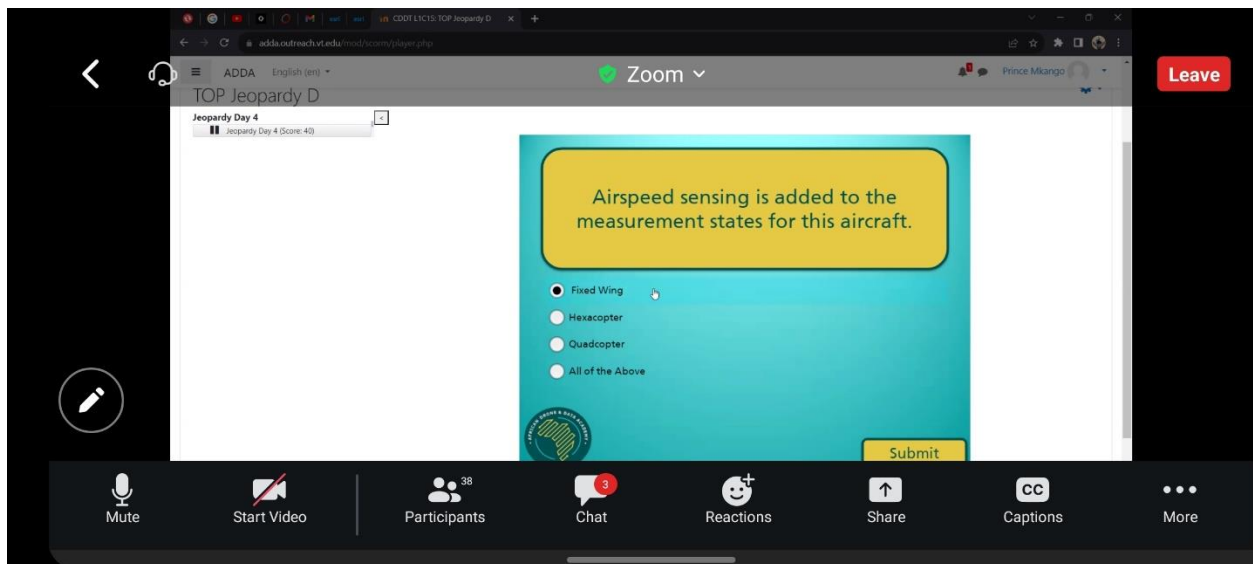

One of the advantages of the Pixhawk 4 mini flight controller is that....

**IT IS OPEN SOURCE**

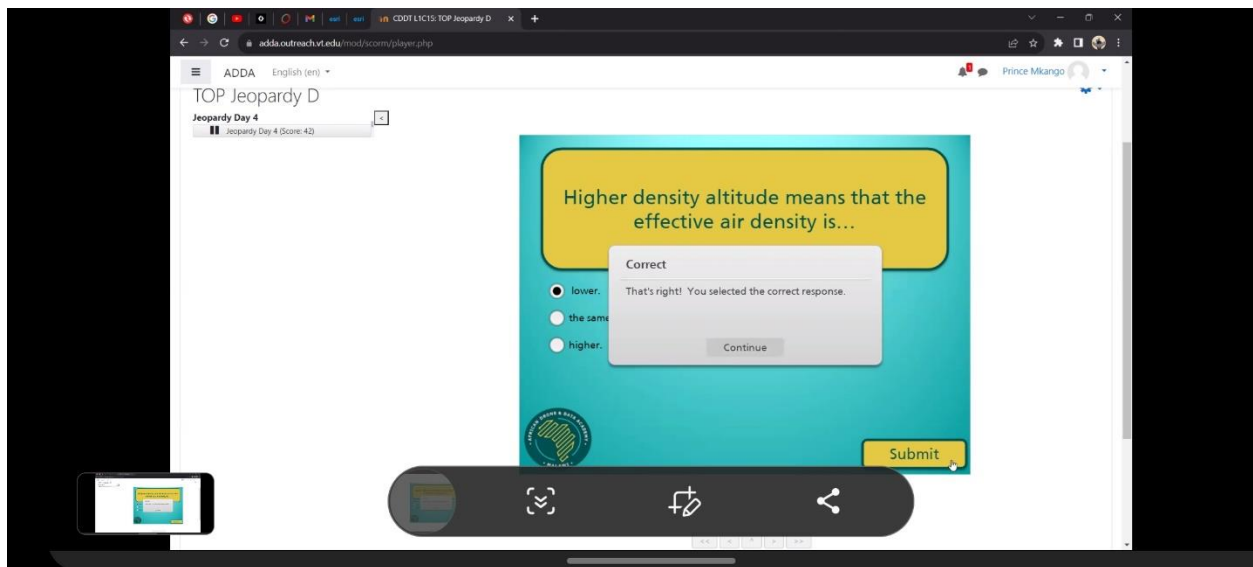

Airspeed sensing is added to the measurement states for this aircraft

**FIXED WING**

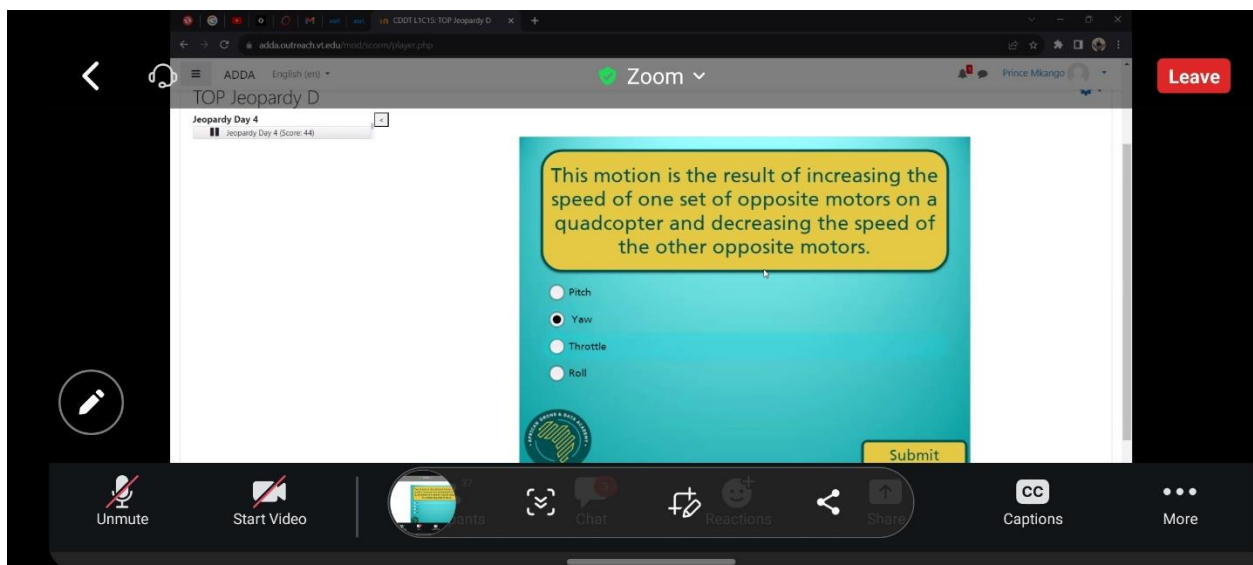

Higher density altitude means that the effective air density is....

**LOWER**

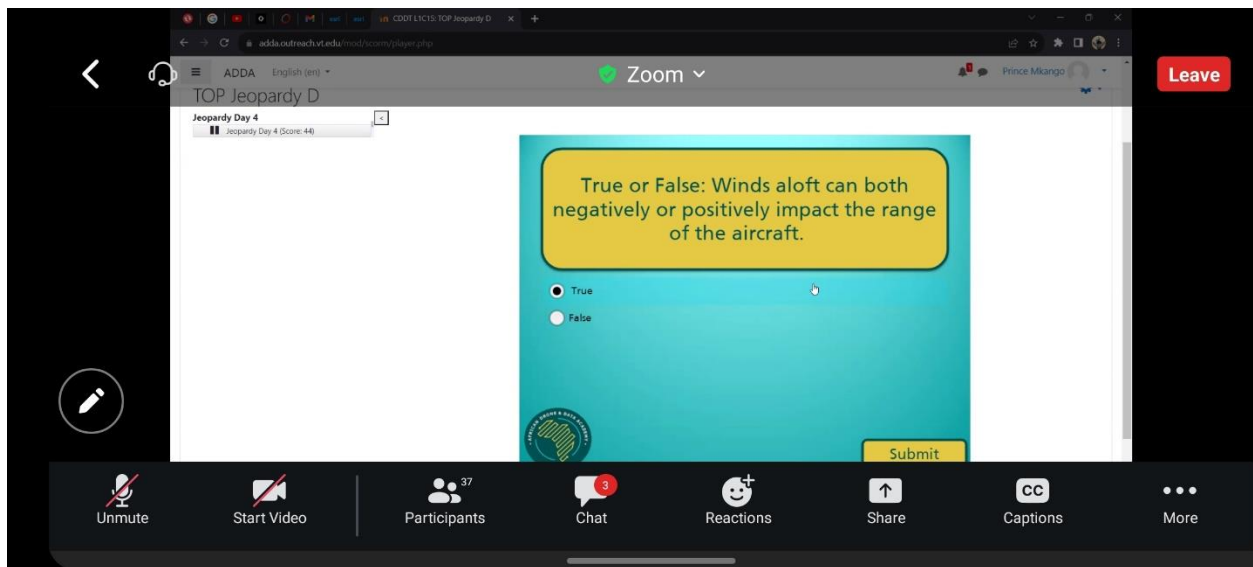

This motion is the result of increasing the speed of one set of opposite motors on a quadcopter and decreasing the speed of the other opposite motors.

YAW

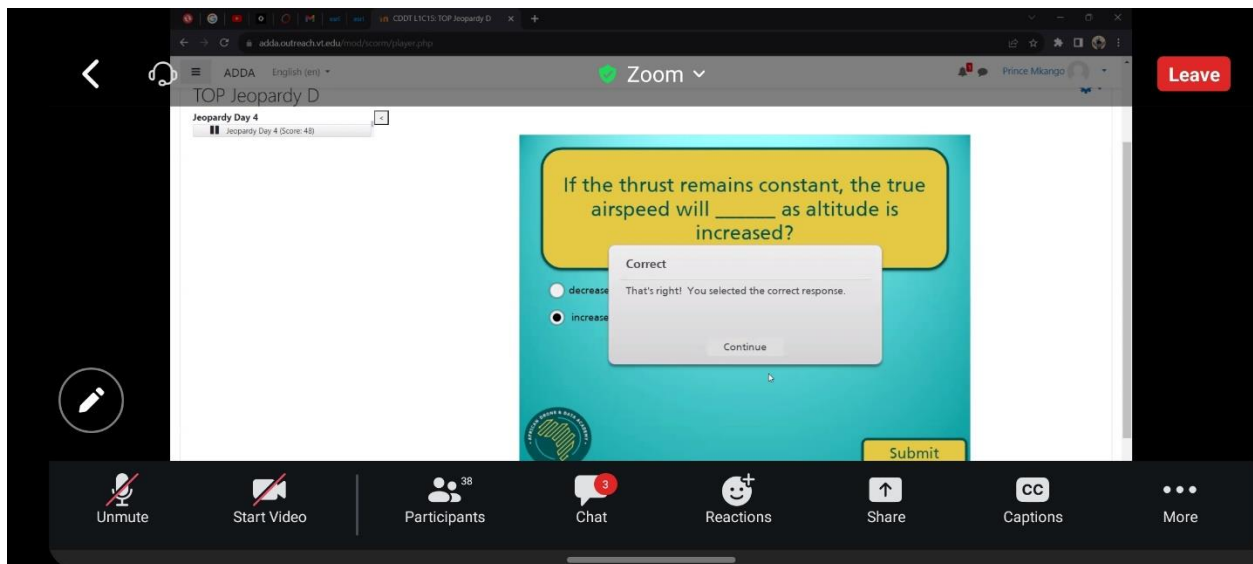

TRUE OR FALSE: Winds aloft can both negatively impact the range of the aircraft.

TRUE

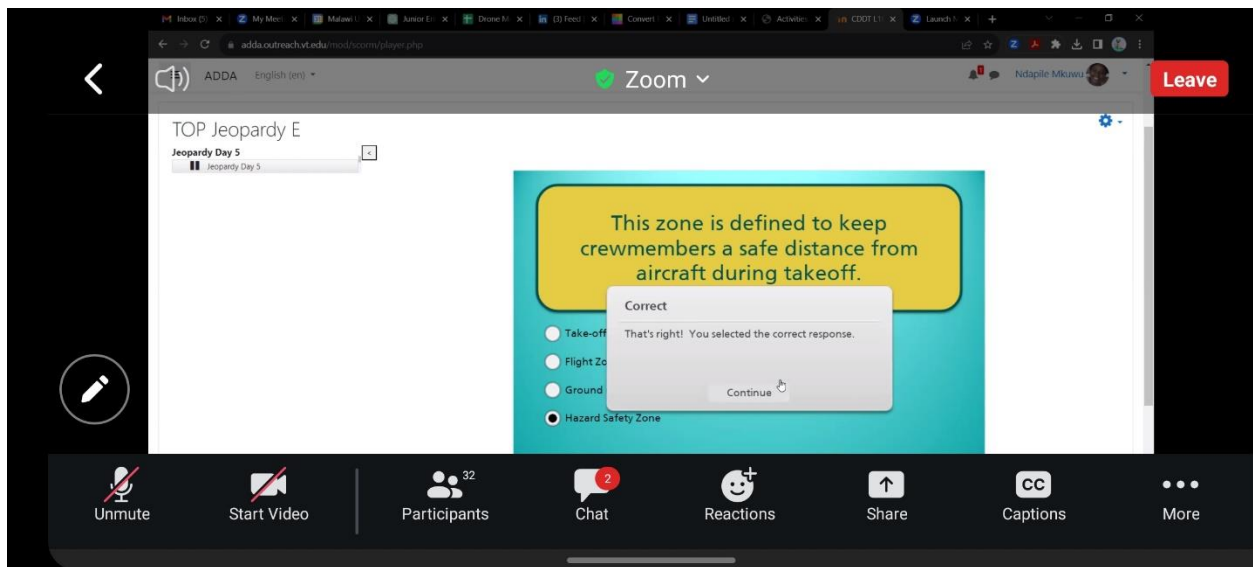

If the thrust remains constant , the true airspeed will--- as altitude is increased?

INCREASE

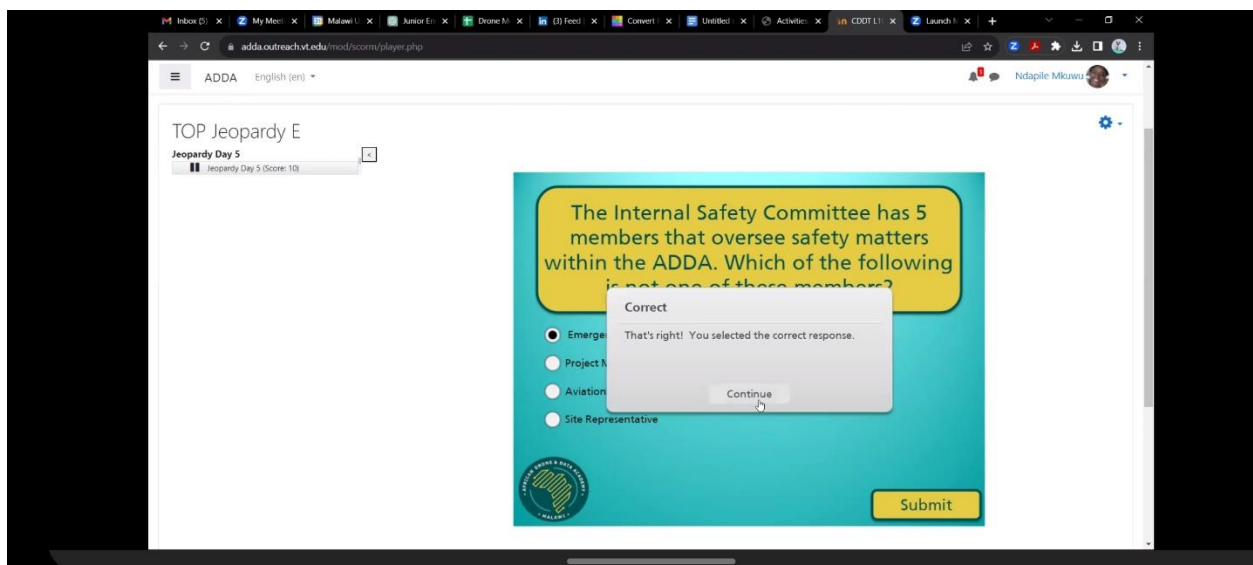

This zone is defined to keep crewmembers a safe distance from aircraft during takeoff

HAZARD SAFETY ZONE

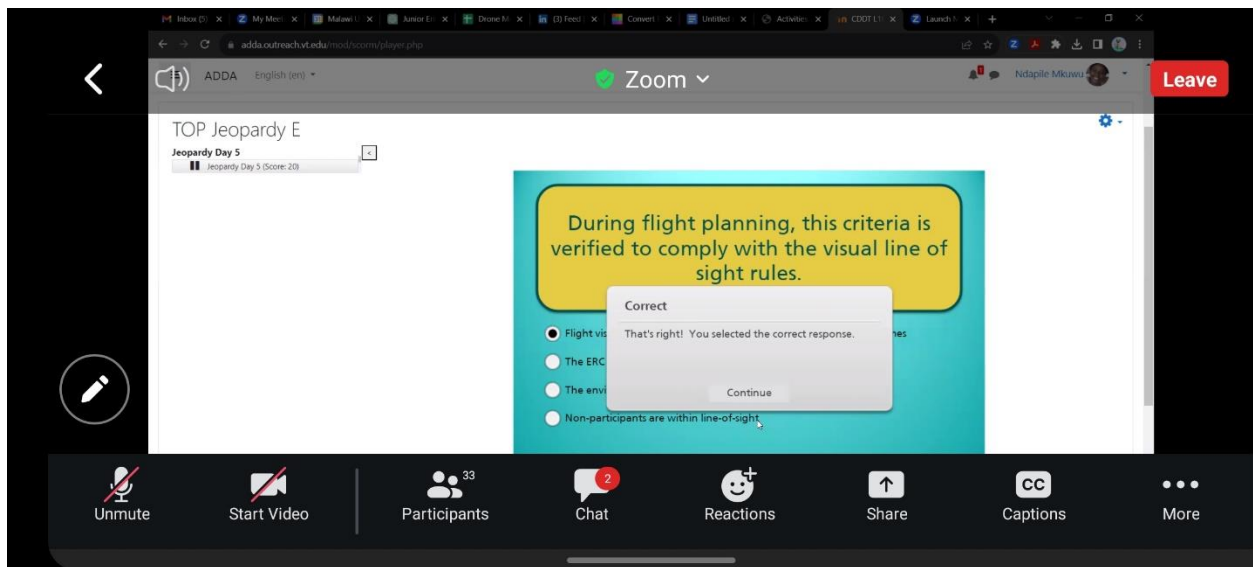

The internal safety committee has 5 members that oversee safety matters within the ADDA. Which of the following is not one of these members?

EMERGENCY RESPONSE COORDINATOR

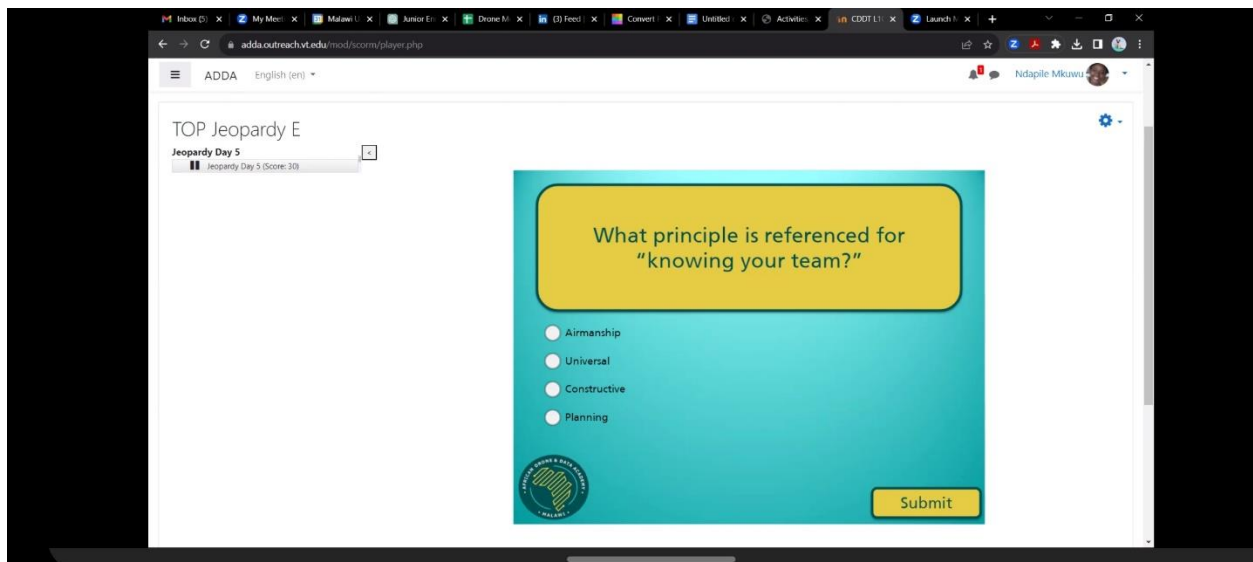

During flight, this criteria is verified to comply with the visual line of sight rules

FLIGHT VISIBILITY WILL ALLOW LINE OF SIGHT VISIBILITY OF THE AIRCRAFT AT ALL TIMES

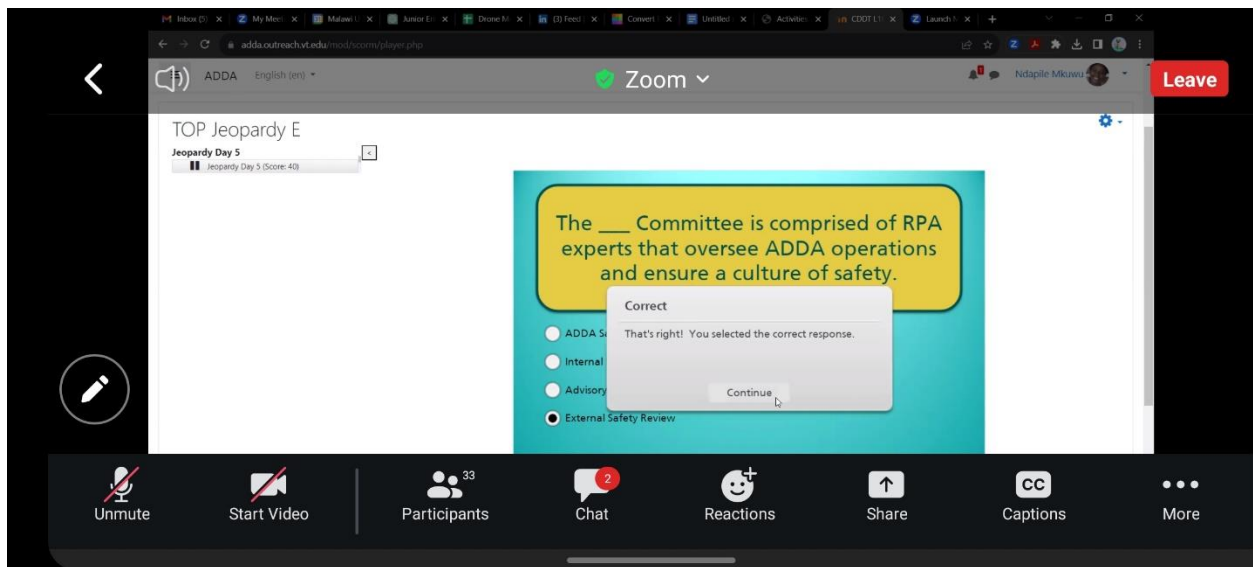

What principle is referenced for knowing your team

**AIRMANSHIP**

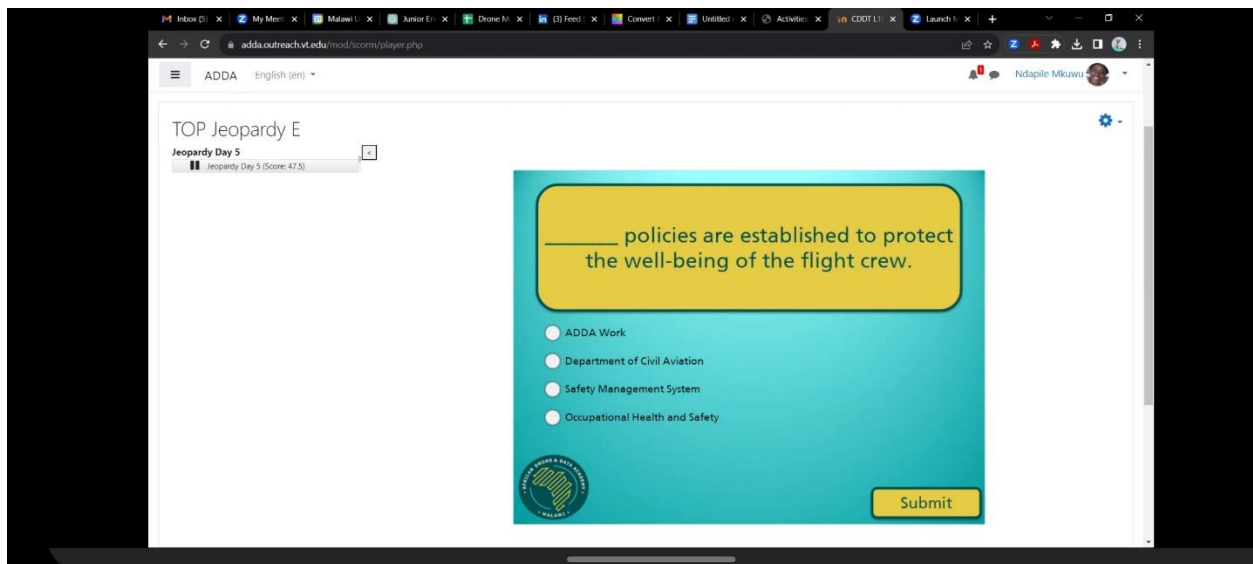

The ---- committee is comprised of RPA experts that oversee ADDA operations and ensure a culture of safety.

**EXTERNAL SAFETY REVIEW**

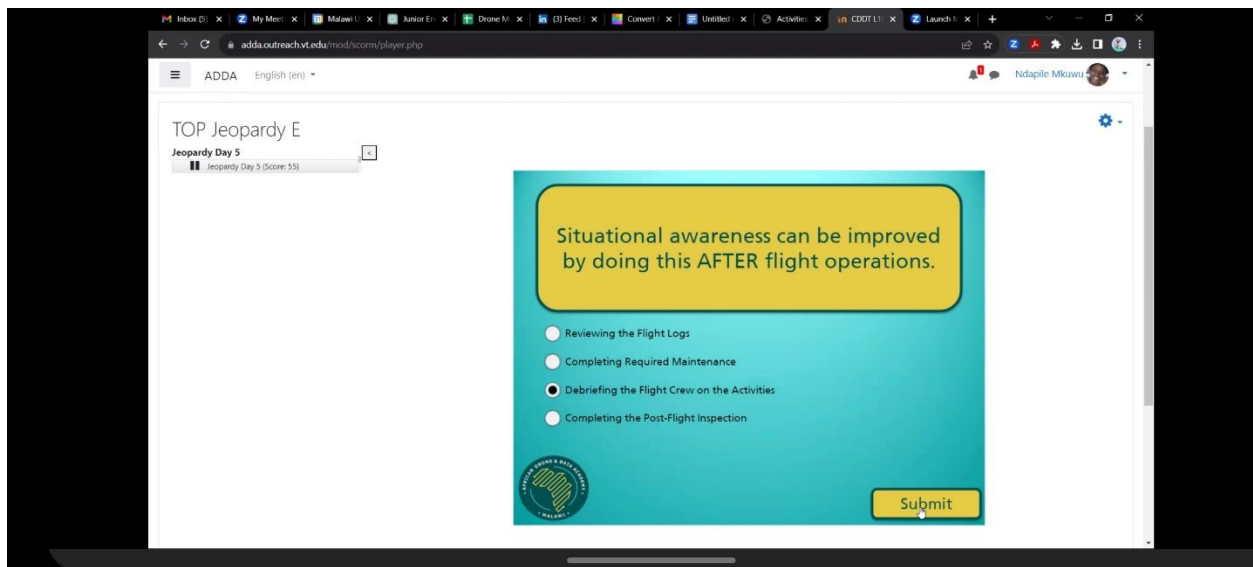

-----Policies are established to protect the well being of the flight crew

## OCCUPATIONAL HEALTH AND SAFETY

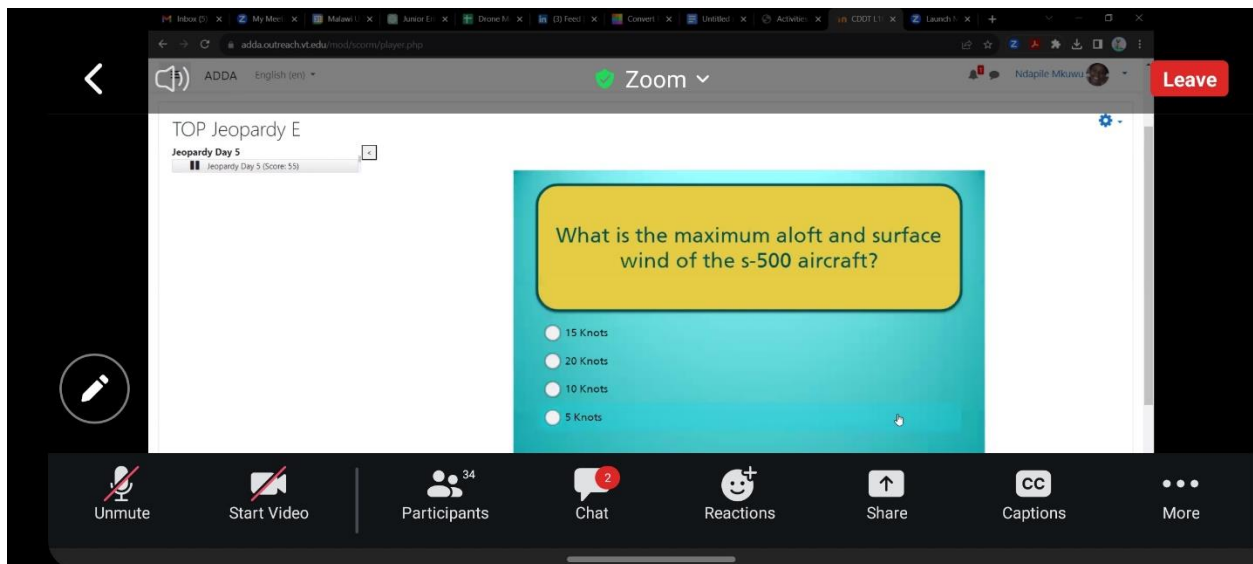

Situation awareness can be improved by doing this AFTER flight operations.

## DEBRIEFING THE FLIGHT CREW ON THE ACTIVITIES

What is the maximum aloft and surface wind of the s-500 aircraft?

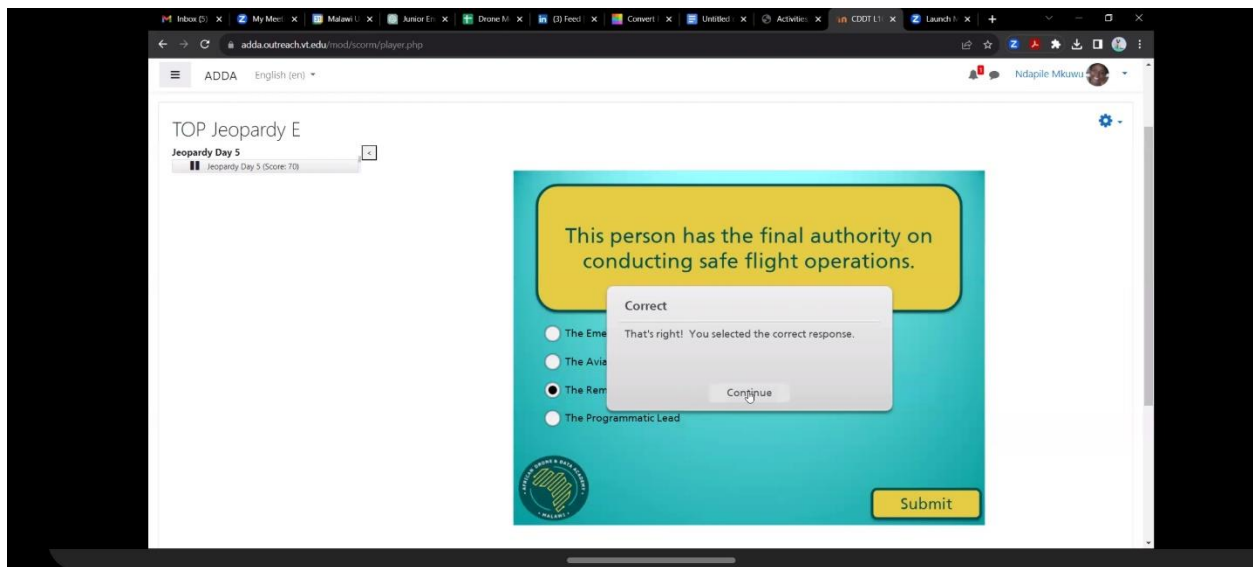

15KNOTS

This person has the final authority on conducting safe flight operations.

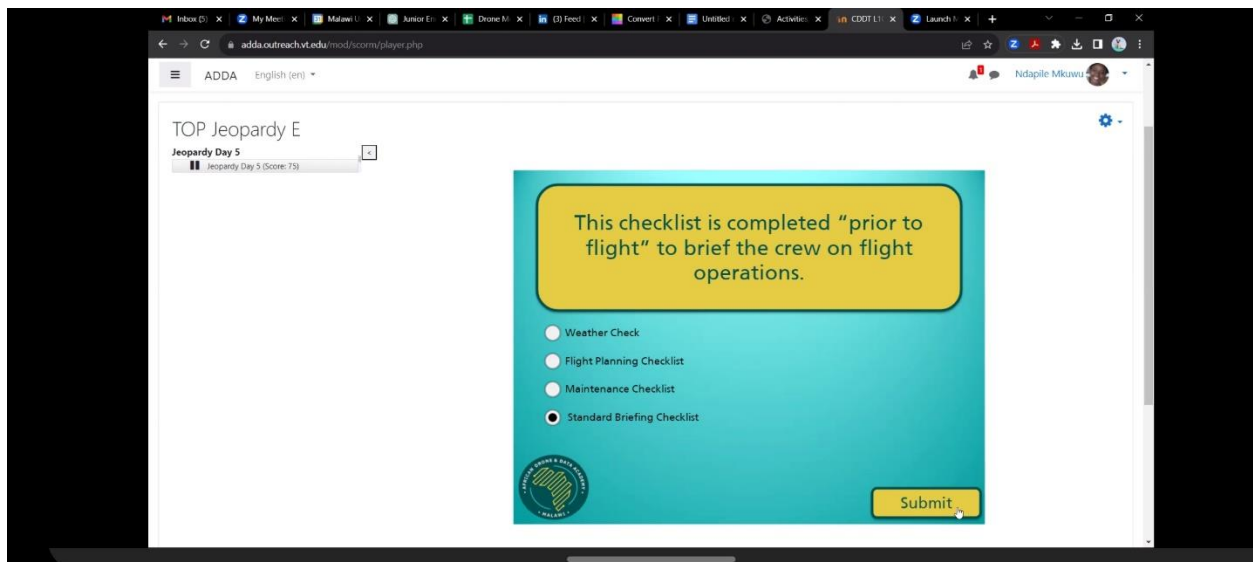

THE REMOTE PILOT IN COMAND

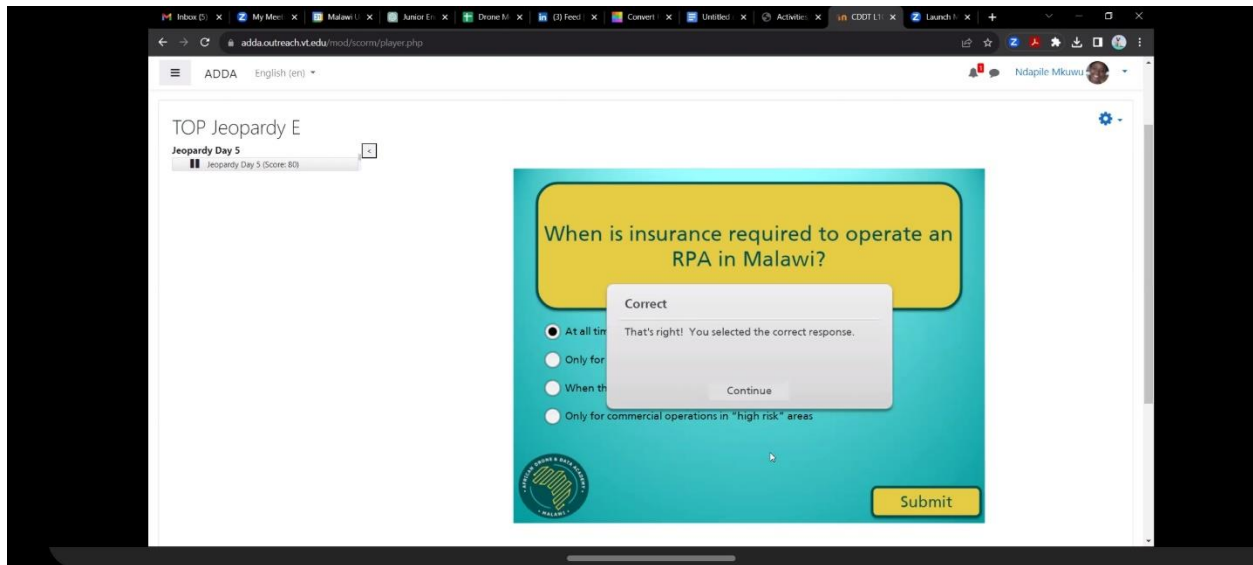

**This checklist is completed prior to flight to brief the crew on flight operations.**

### **STANDARD BRIEFING CHECKLIST**

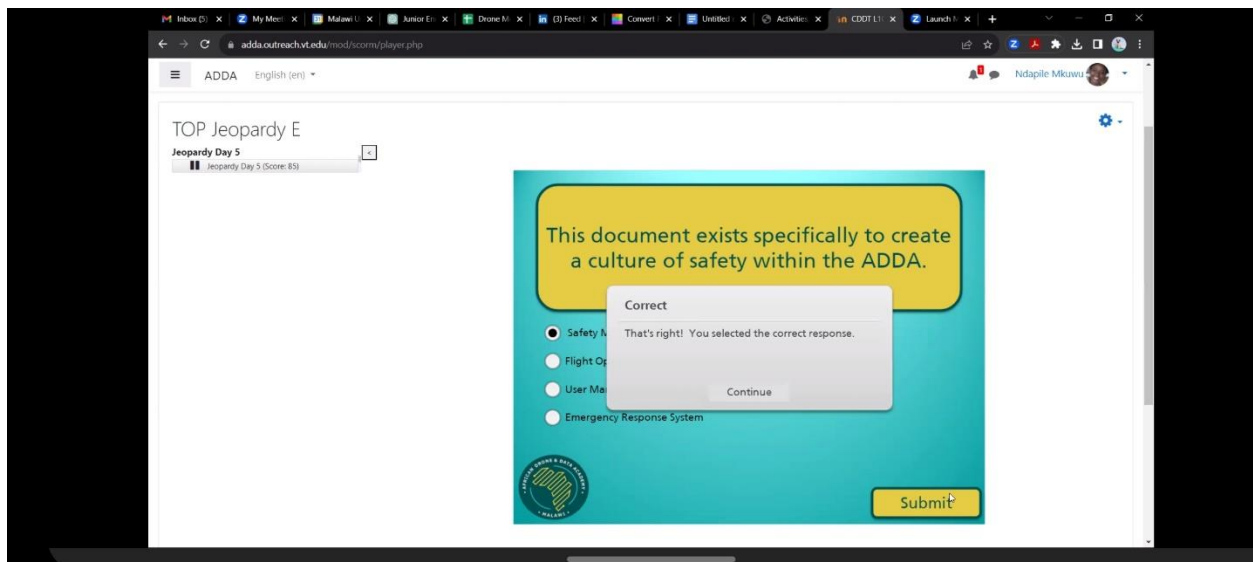

**When is insurance required to operate an RPA in Malawi**

**ALL THE TIME**

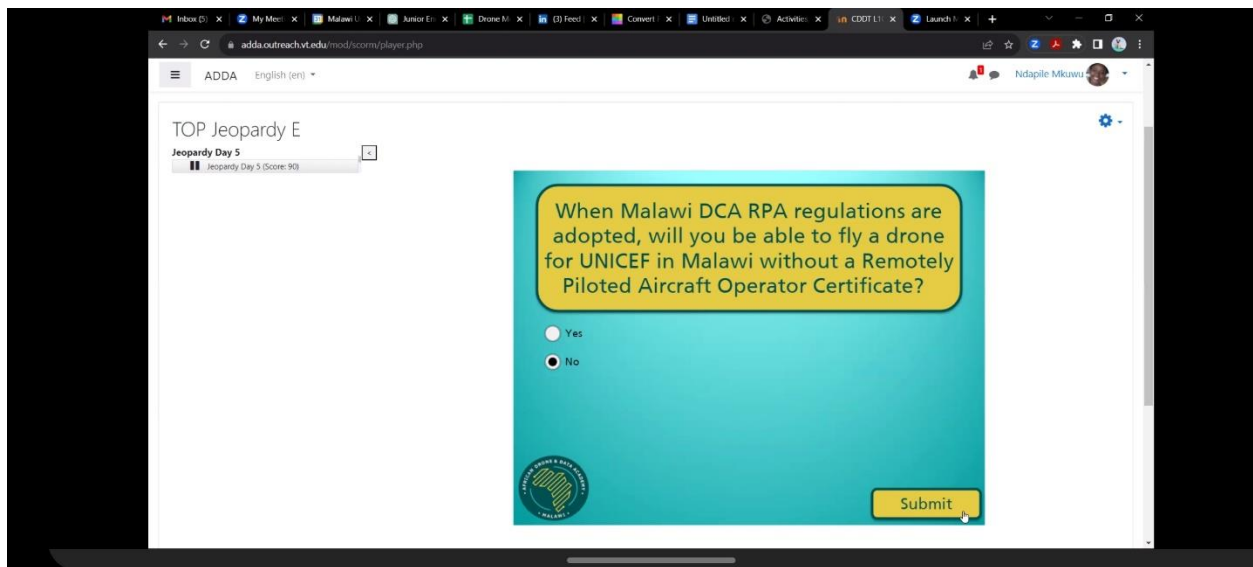

**This document exists specifically to create a culture of safety within ADDA**

## **SAFETY MANAGEMENT SYSTEM**

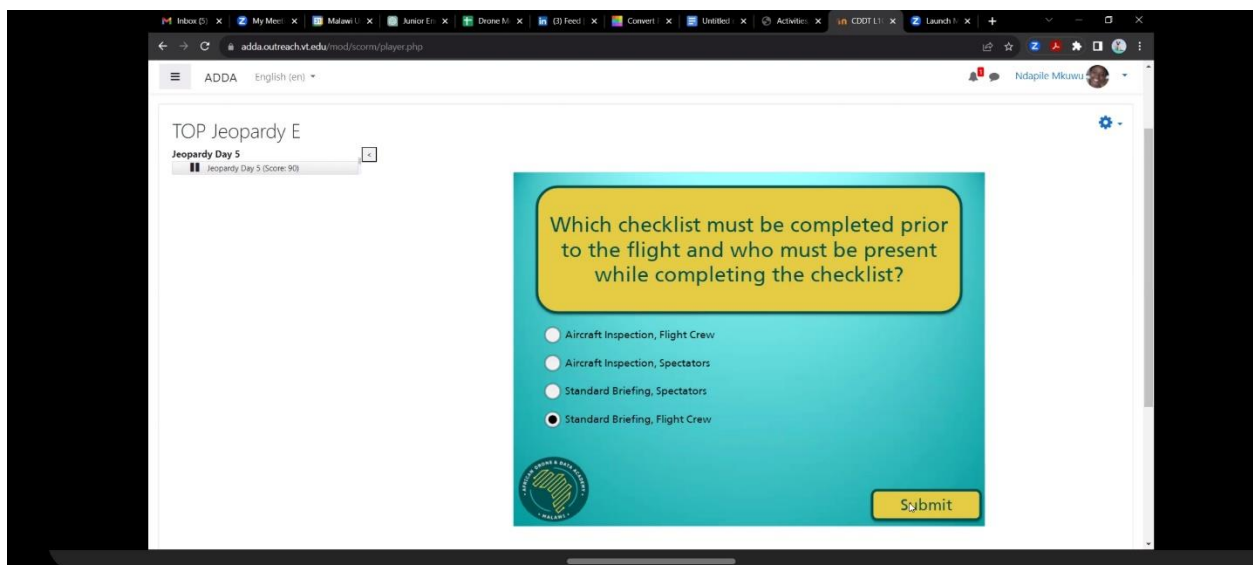

**When Malawi DCA RPA regulations are adopted will you be able to fly a drone for UNICEF in Malawi without a remotely piloted aircraft operator certificate**

**NO**

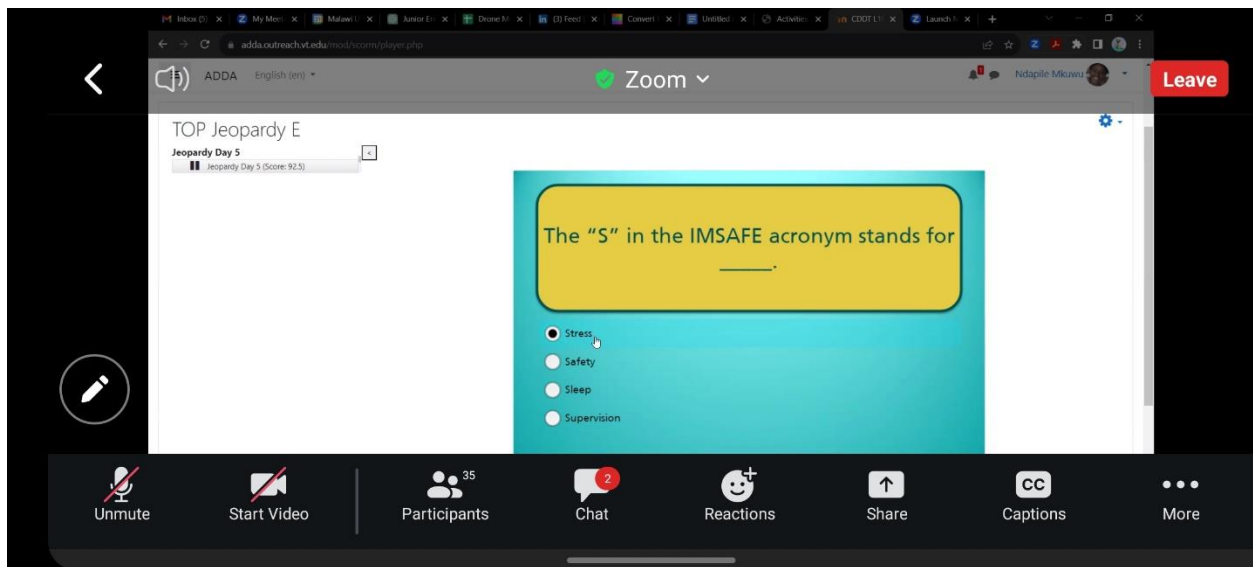

Which checklist must be completed prior to the flight and who must be present while completing the checklist?

**STANDARD BRIEFING FLIGHT CREW**

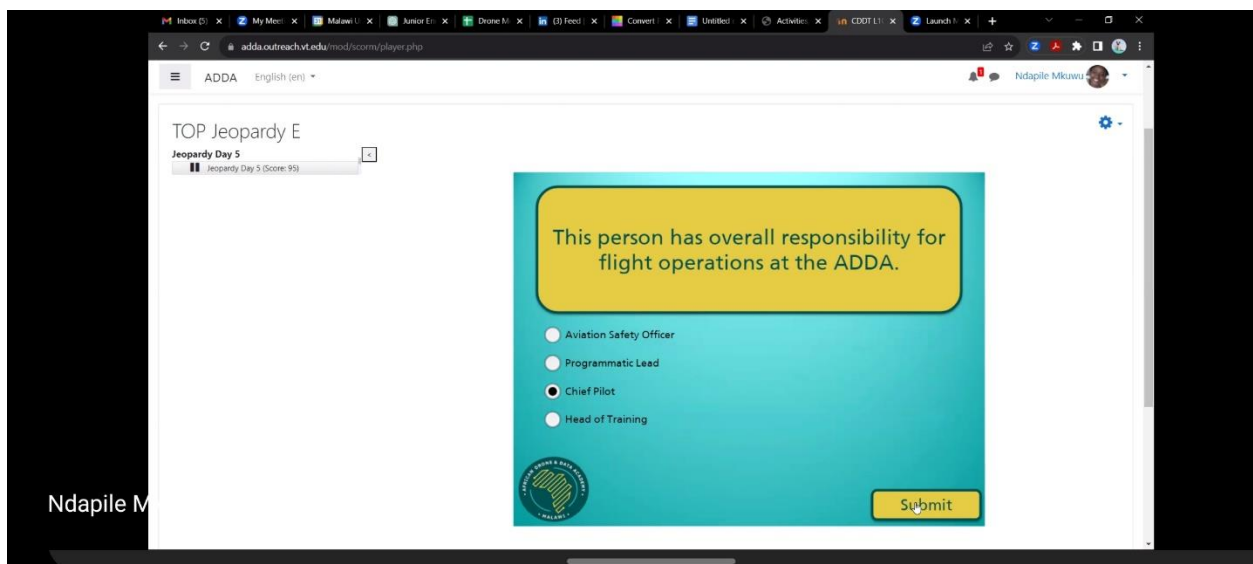

The S in the IMSAFE acronym stands for----

**STRESS**

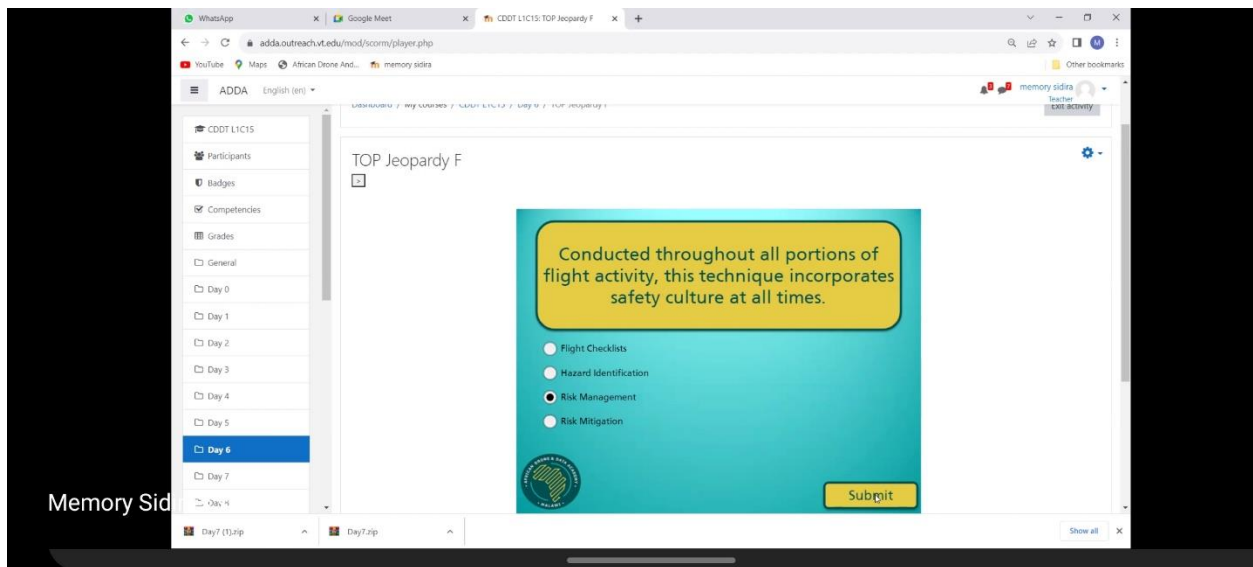

**This person has overall responsibility for flight operations at the ADDA**

**CHIEF PILOT**

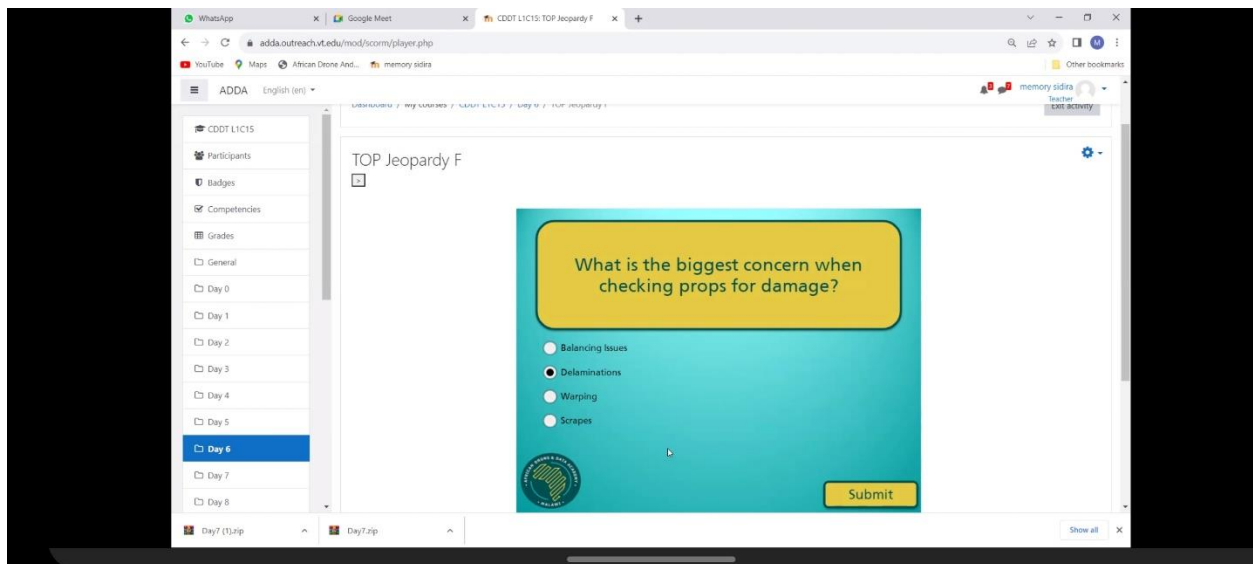

**Conducted throughout all portions of flight activity, this technique incorporates safety culture at all times.**

**RISK MANAGEMENT**

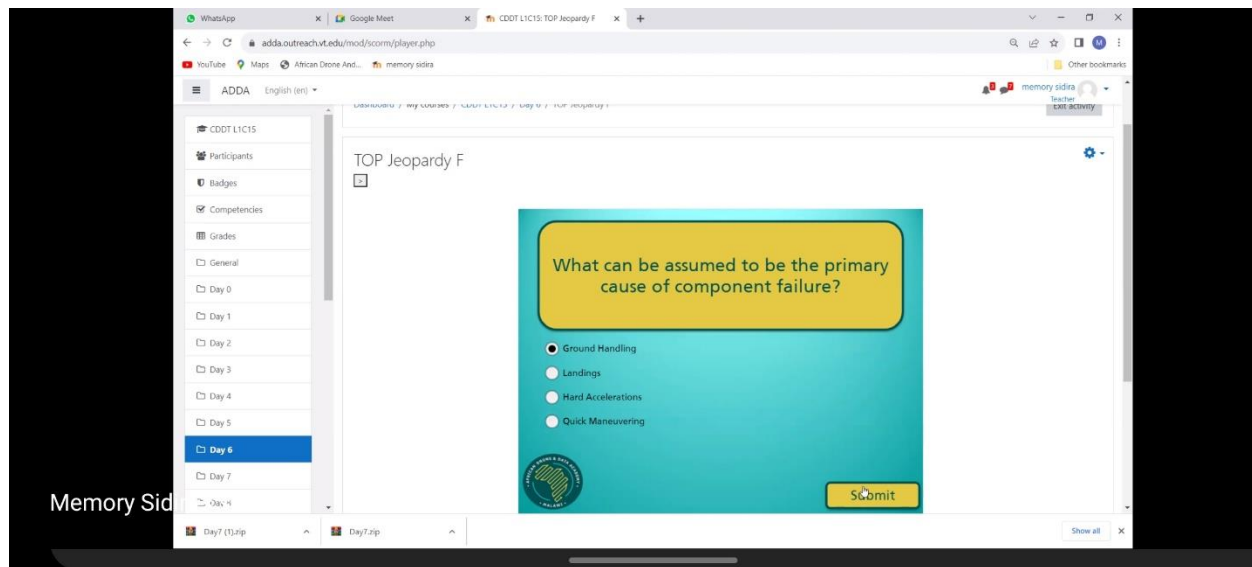

**What is the biggest concern when checking props for damage?**

**DELAMINATION**

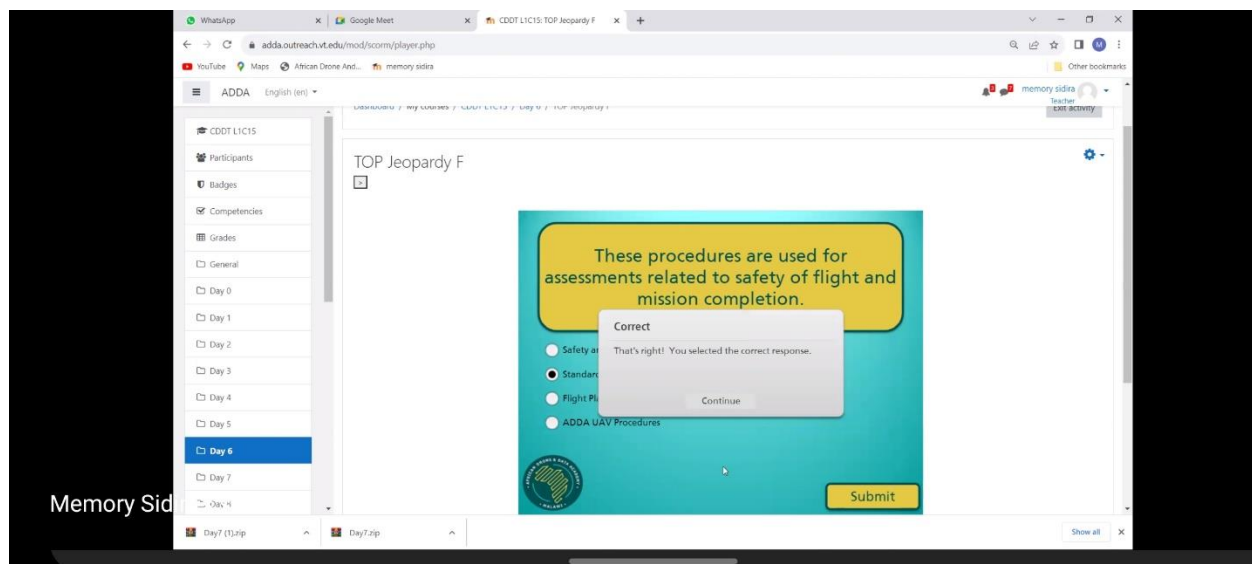

**What can be assumed to be the primary cause of component failure?**

**GROUND HANDLING**

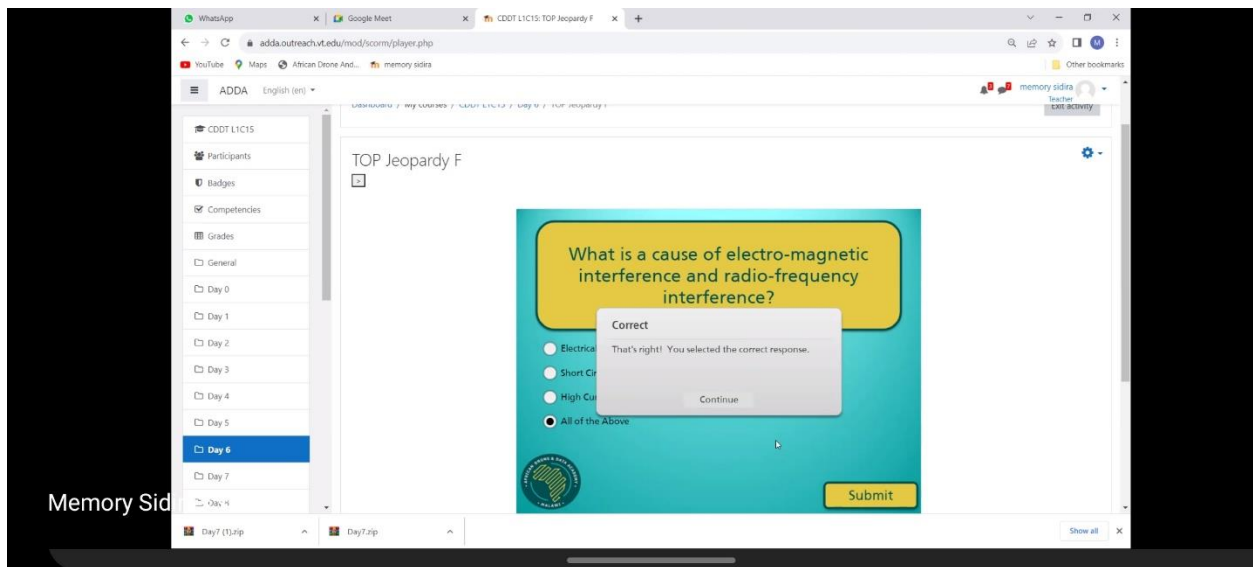

These procedures are used for assessments related to safety of flight and mission completion

## STANDARD OPERATING PROCEDURES

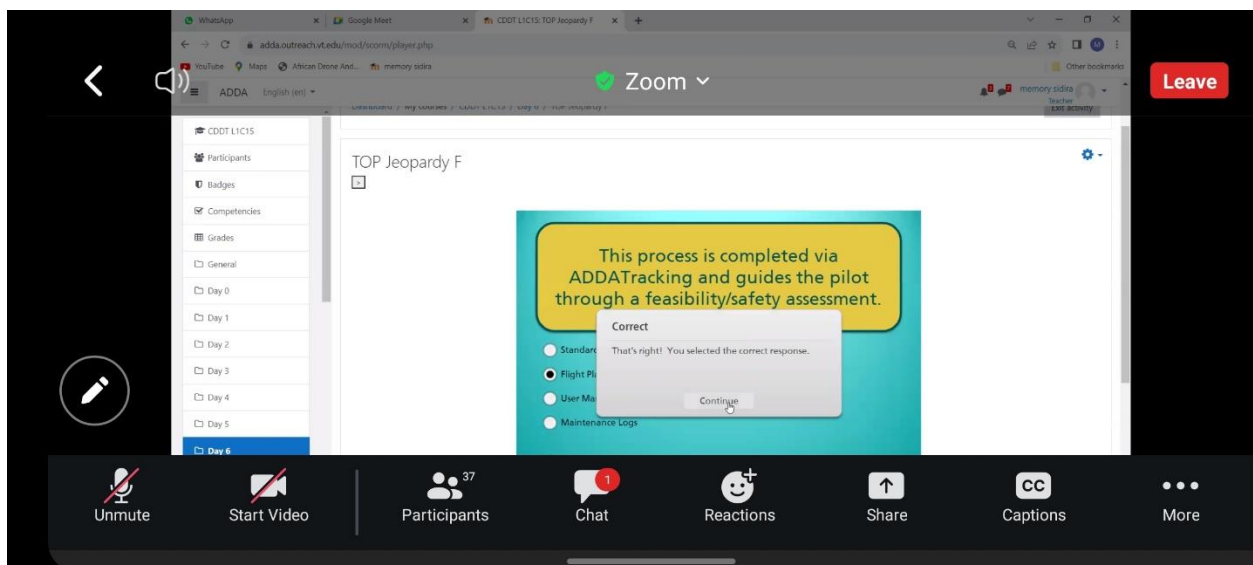

What is a cause of electro-magnetic interference and radio-frequency interference?

ALL OF THE ABOVE

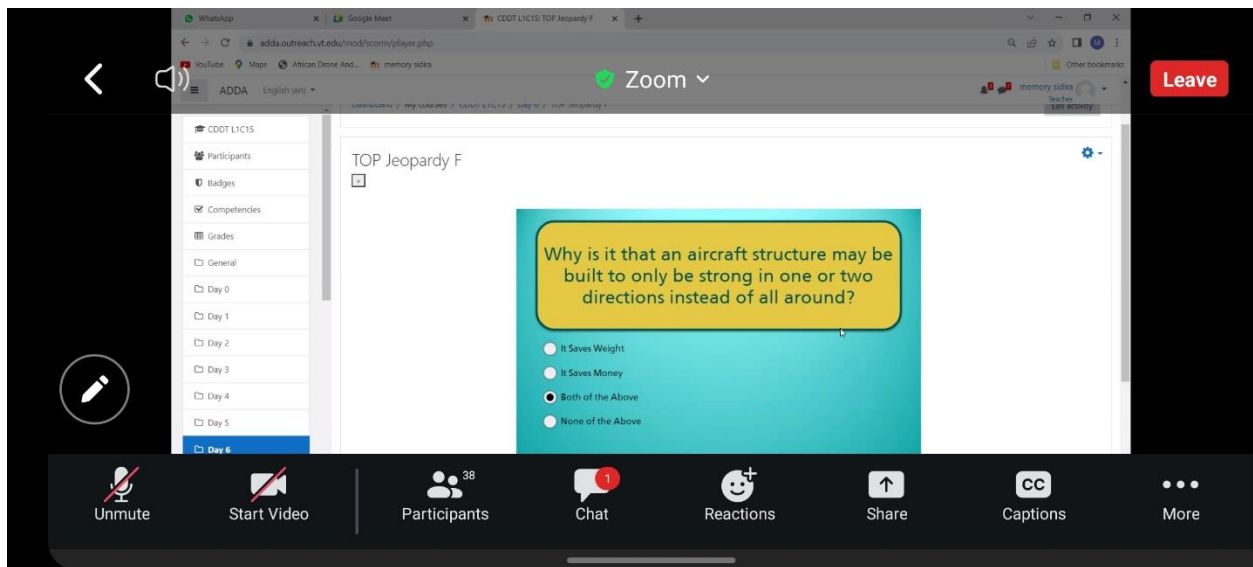

This process is completed via ADDTracking and guides the pilot through a feasibility/safety assessment.

## FLIGHT PLANNING PROCESS

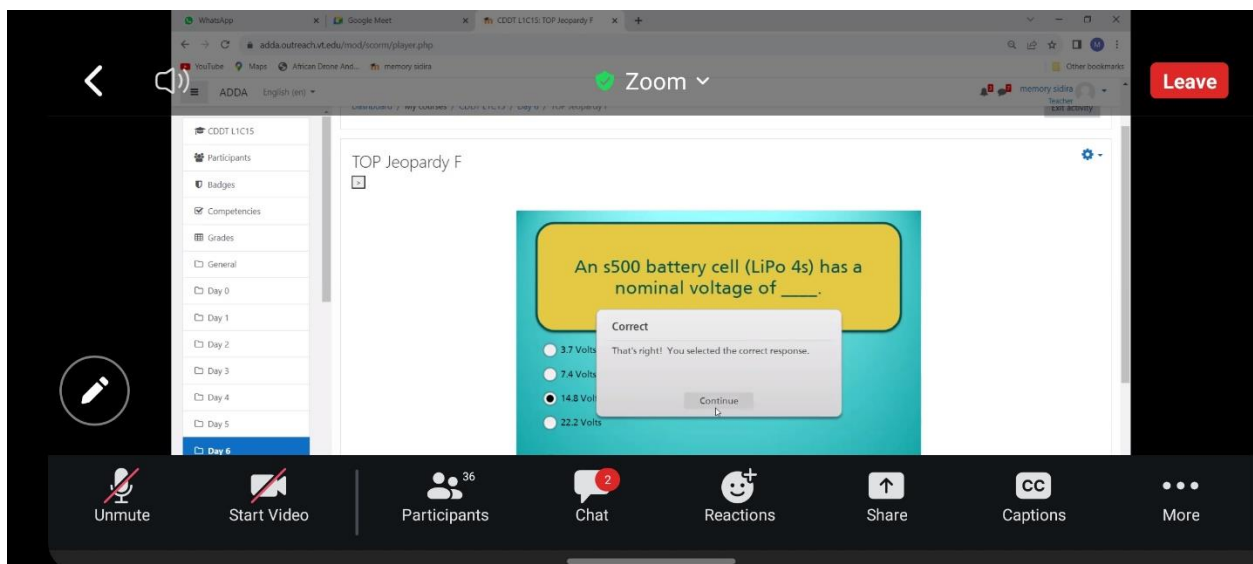

Why is it that an aircraft structure maybe built to only be strong in one or two directions instead of all around?

BOTH OF THE ABOVE

An s500 battery cell(LiPo 4s) has a nominal voltage of ----

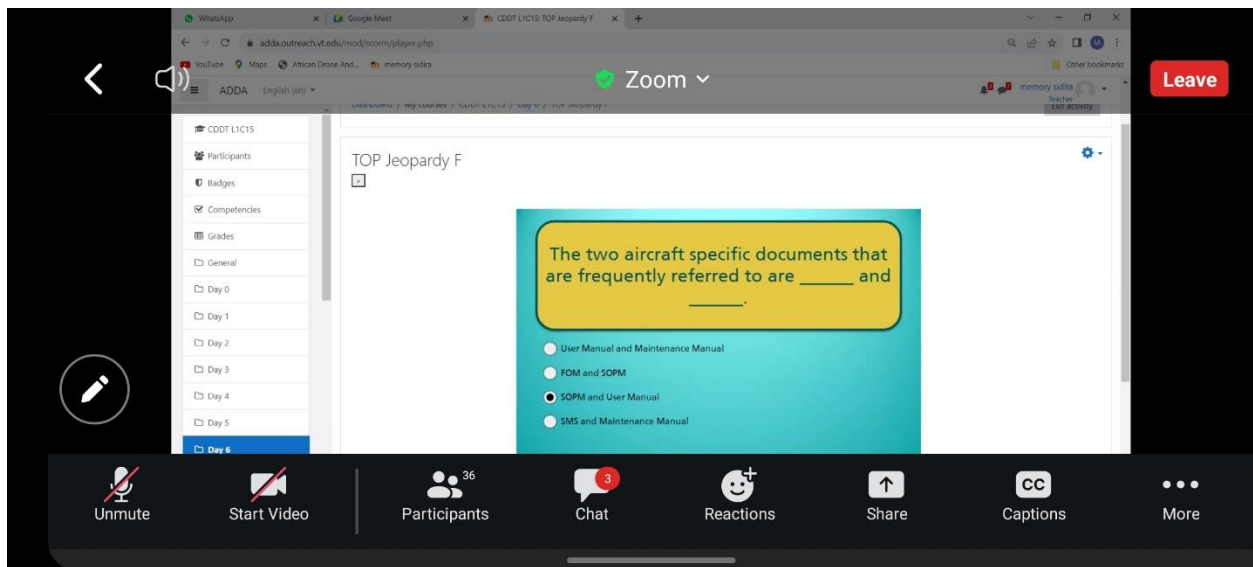

14.8 VOLTS

The two aircraft specific documents that are frequently referred to are --- and ---

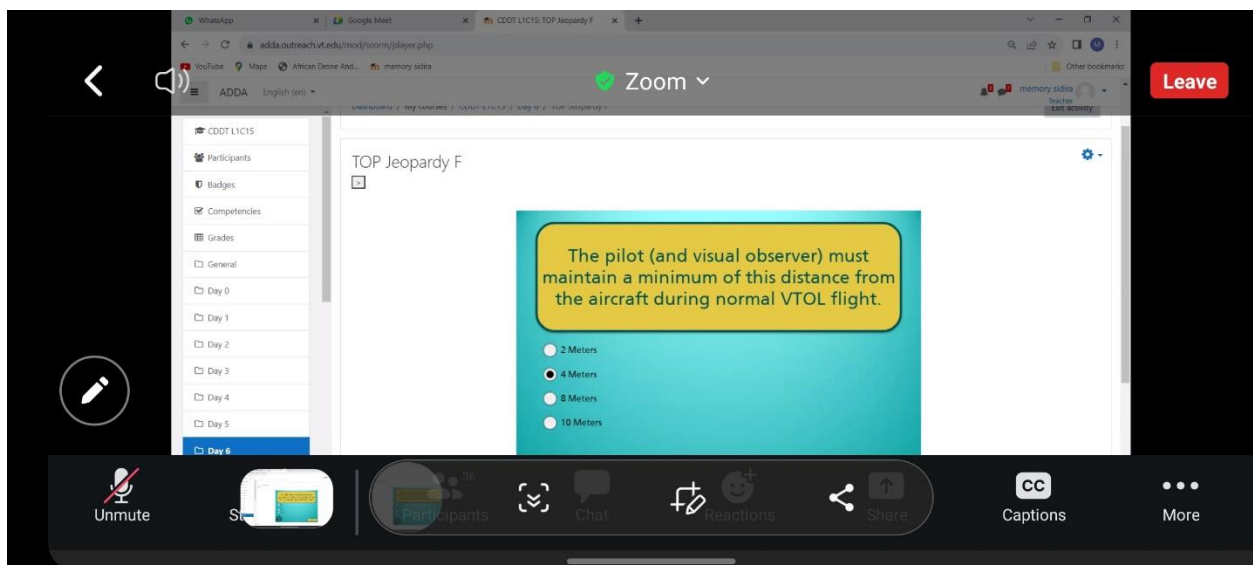

SOPM & USER MANUAL

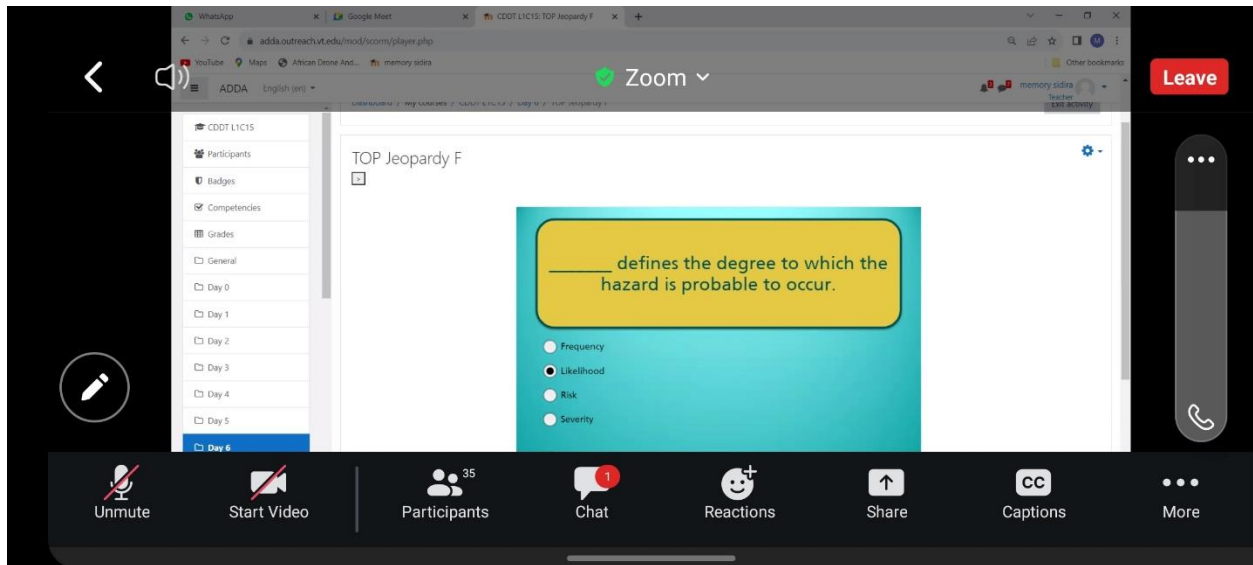

The pilot (and visual observer) must maintain a minimum of this distance from the aircraft during normal VTOL flight

**4 METERS**

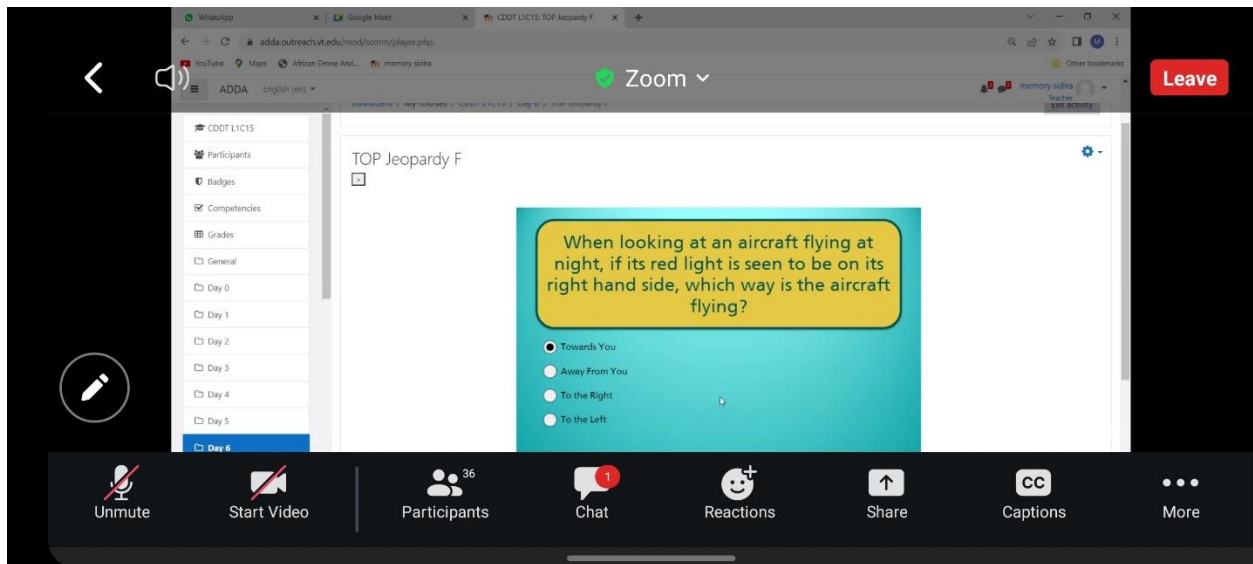

-----defines the degree to which the hazard is probable to occur.

**LIKELIHOOD**

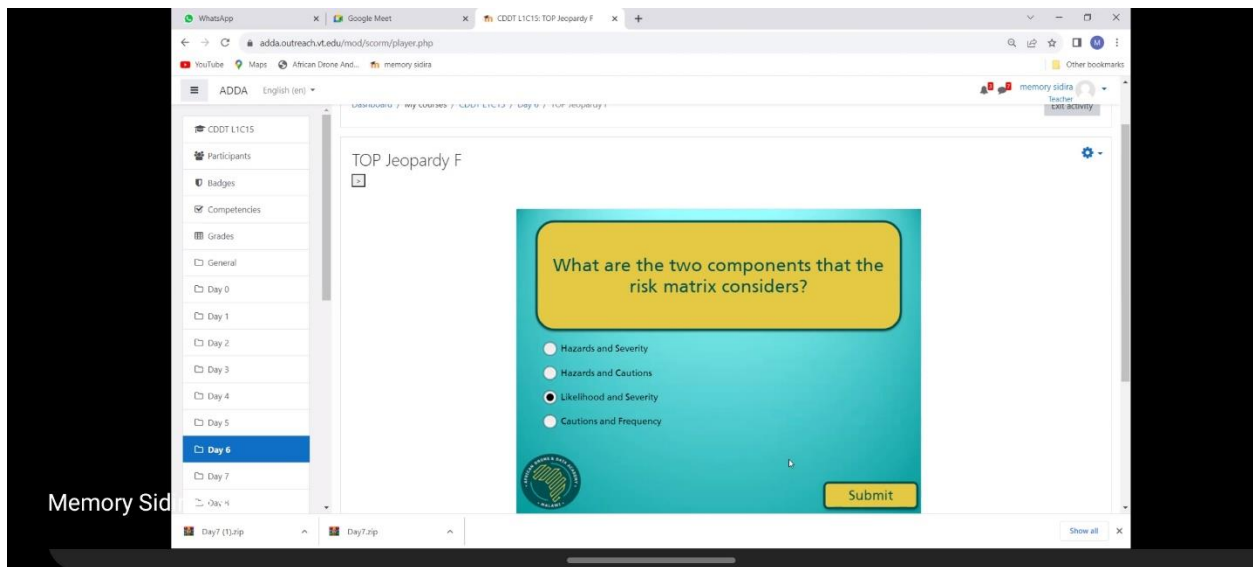

**When looking at an aircraft flying at night, if its red light is seen to be on its right hand side, which way is the aircraft flying?**

**TOWARDS YOU**

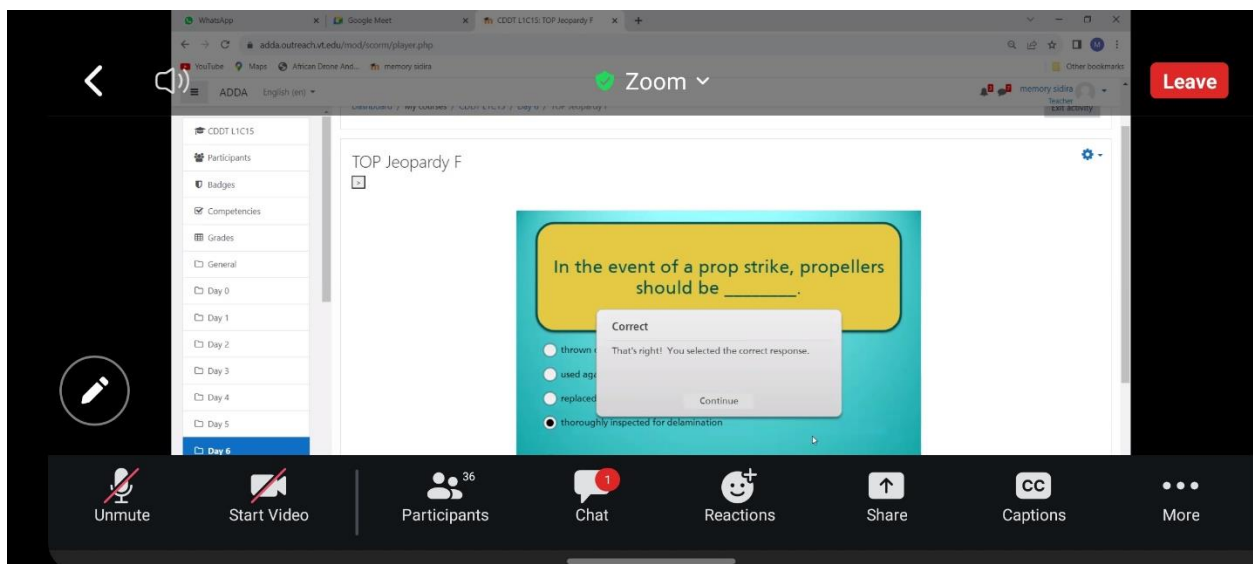

**What are the two components that the risk matrix considers**

**LIKELIHOOD AND SEVERITY**

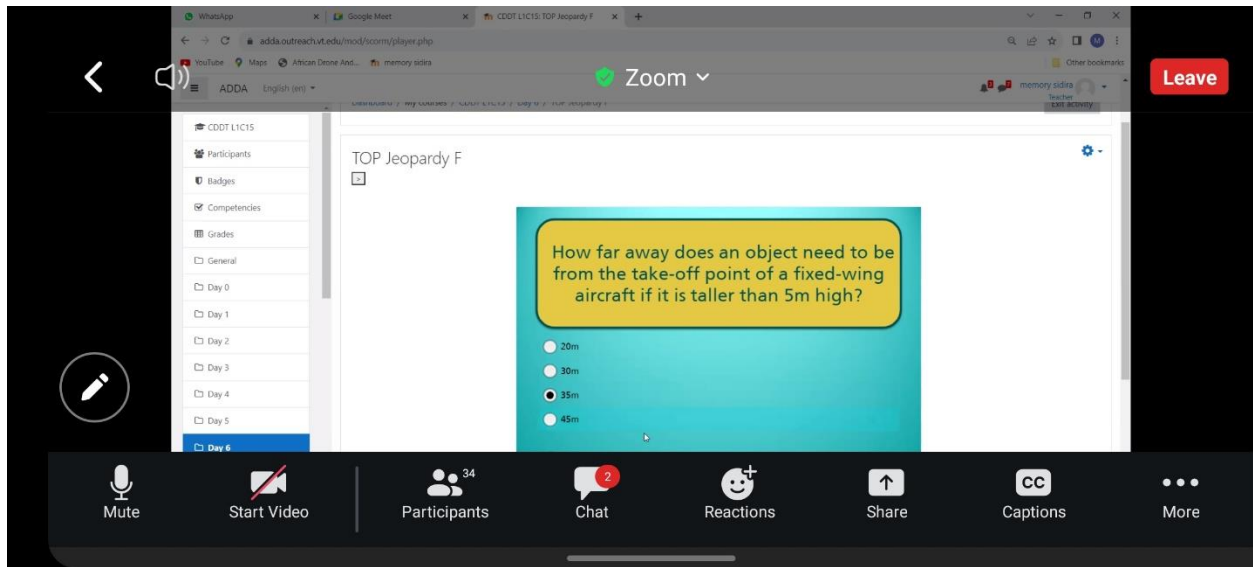

In the event of a prop strike, propellers should be-----

**THOROUGHLY INSPECTED FOR DELAMINATION**

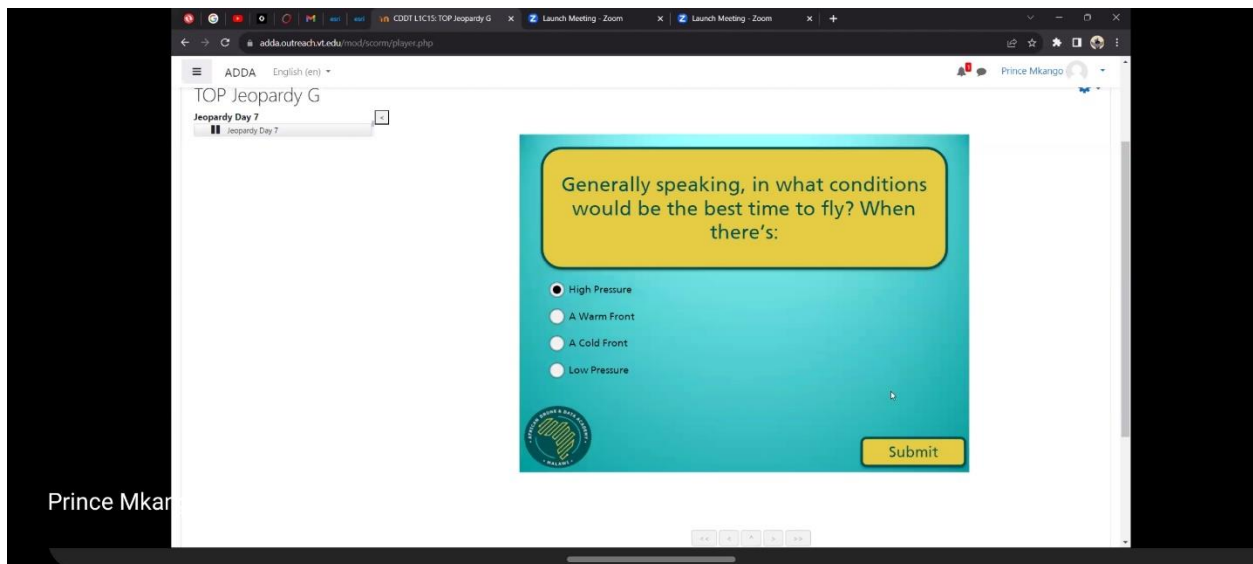

How far away does an object need to be from the take-off point of a fixed wing aircraft if it is either taller than 5m high

**35m**

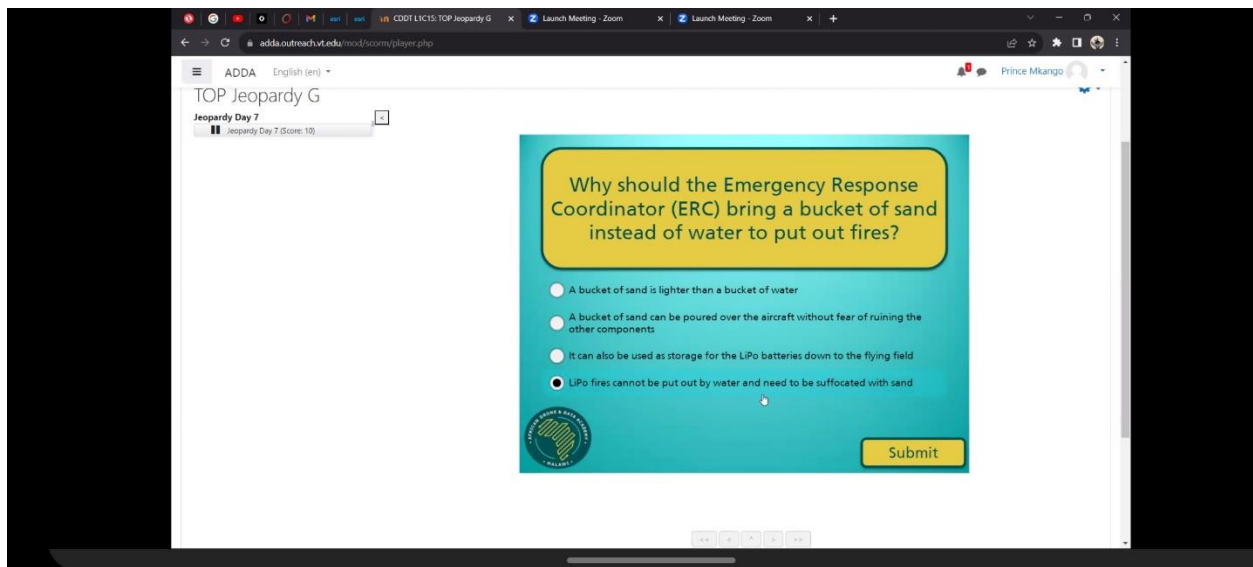

Generally speaking, in what conditions would be the best time to fly? When there is:

**HIGH PRESSURE**

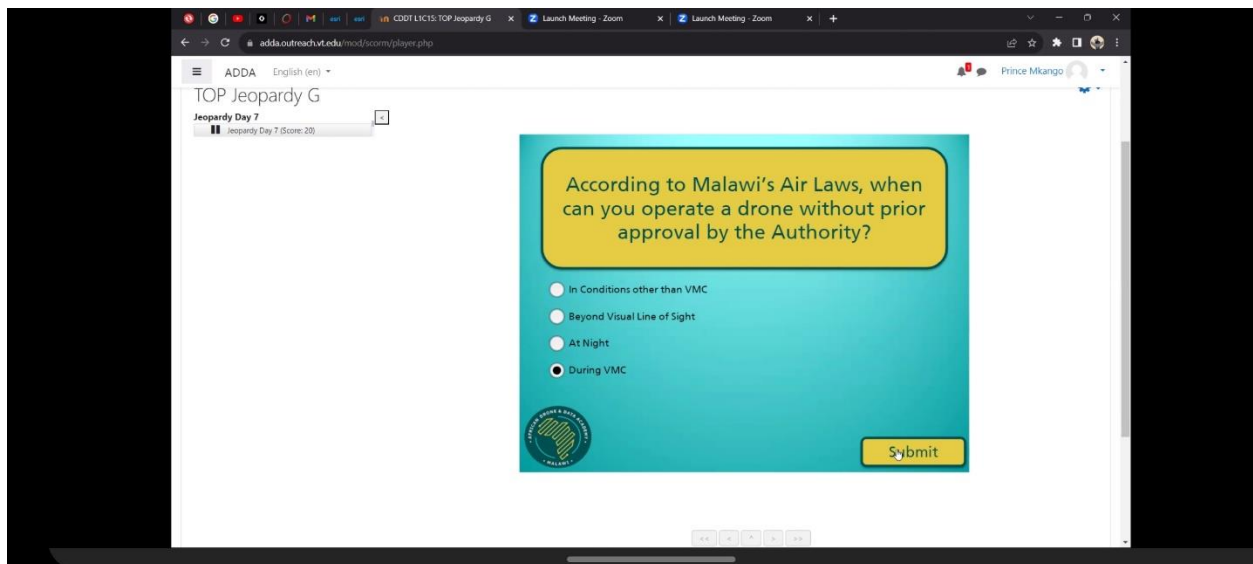

Why should the Emergency Response Coordinator (ERC) bring a bucket of sand instead of water to put out fires?

**LIPO FIRES CANNOT BE PUT OUT BY WATER AND NEED TO BE SUFFOCATED WITH SAND**

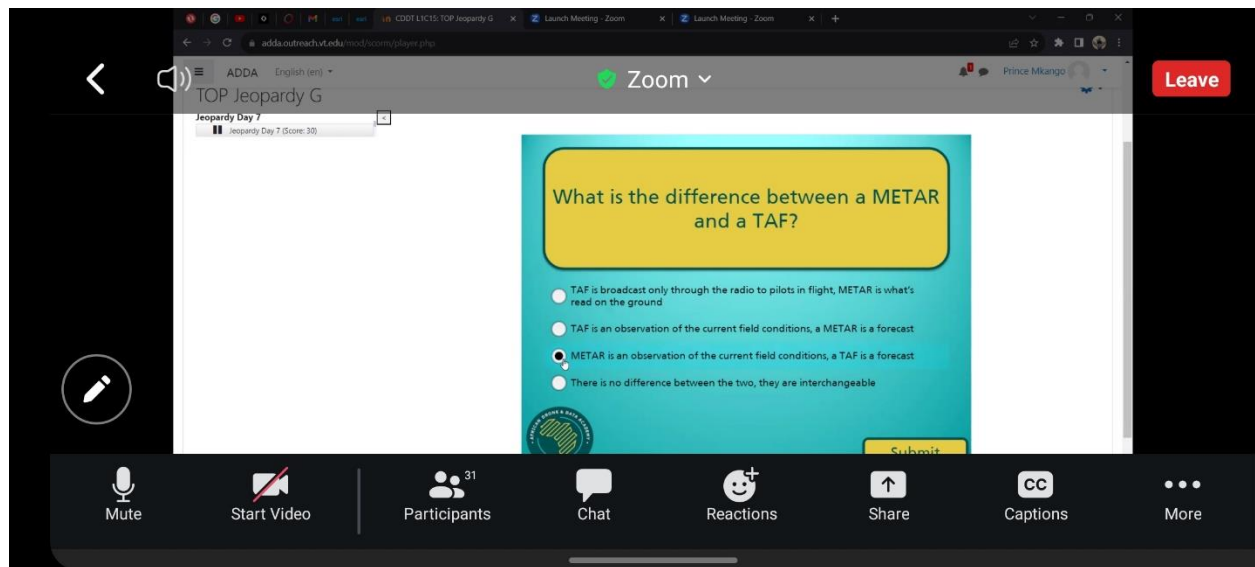

**According to Malawi's Air Laws, when can you operate a drone without prior approval by the authority DURING VMC**

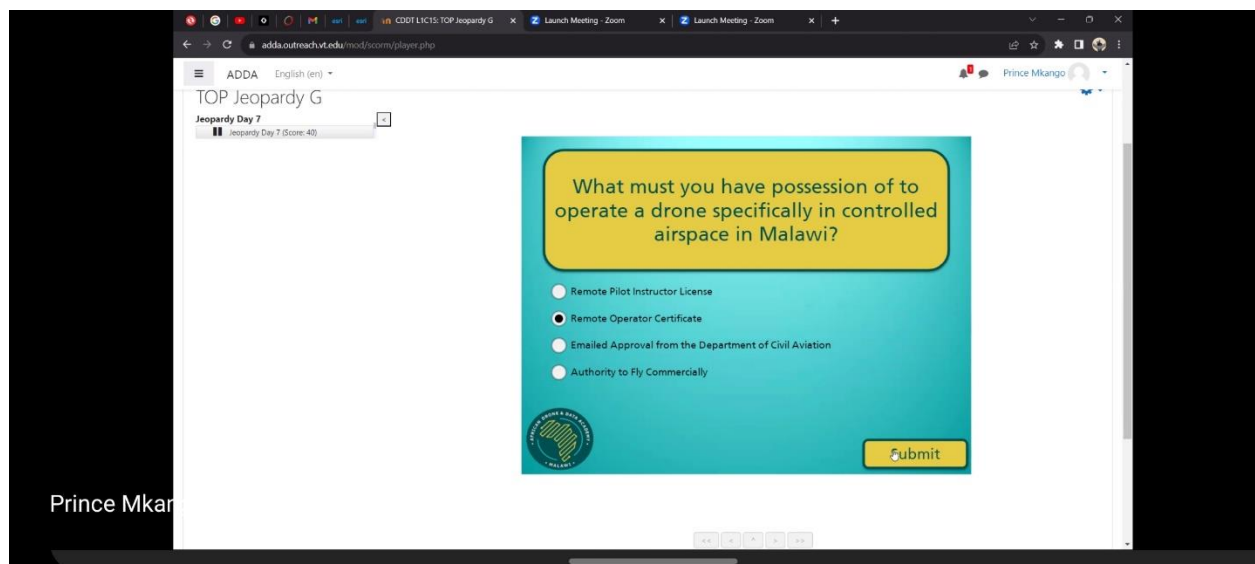

**What is the difference between a METAR and a TAF ?**

**METAR IS AN OBSERVATION OF THE CURRENT FIELD CONDITIONS, A TAF IS A FORECAST**

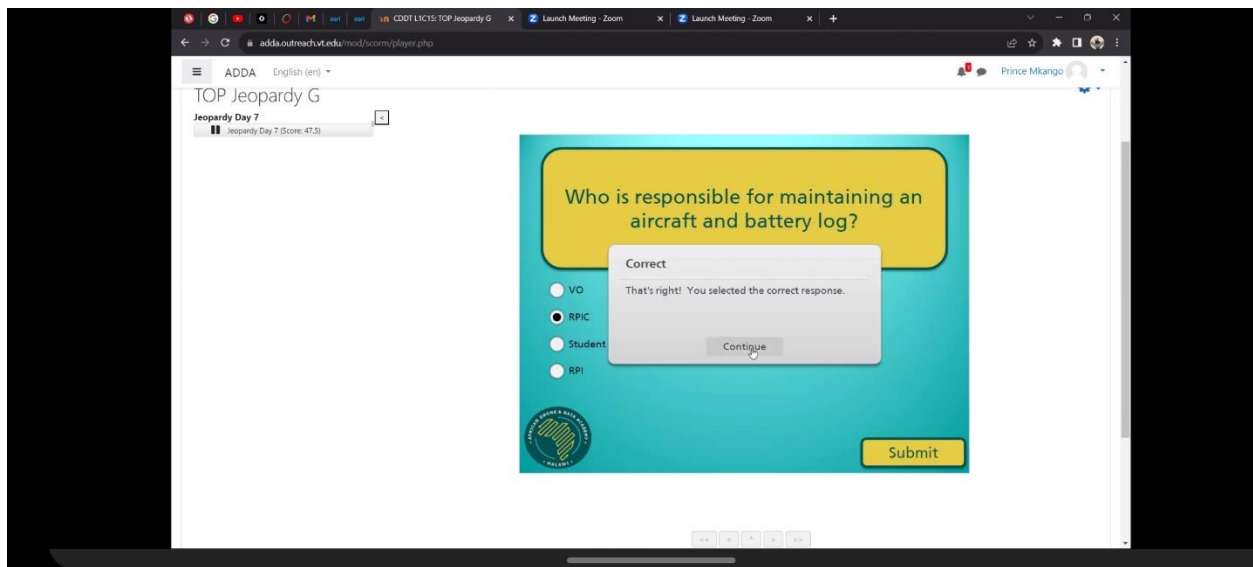

**What must you have possession of to operate a drone specifically in controlled airspace in Malawi?**

**REMOTE OPERATOR CERTIFICATE**

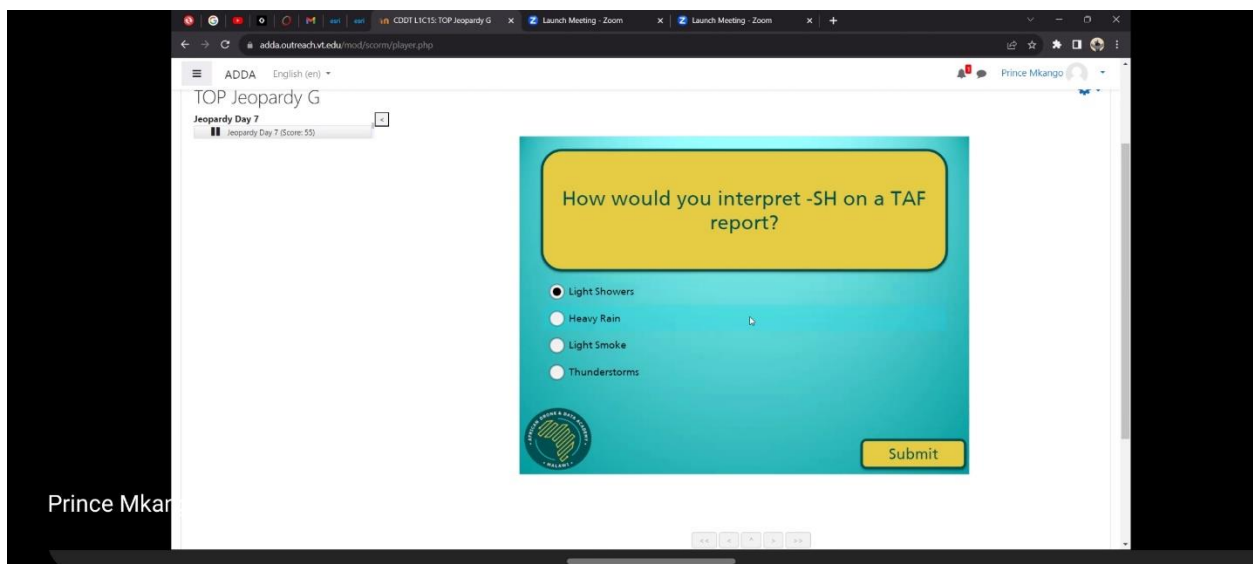

**Who is responsible for maintaining an aircraft and battery log?**

**RPIC**

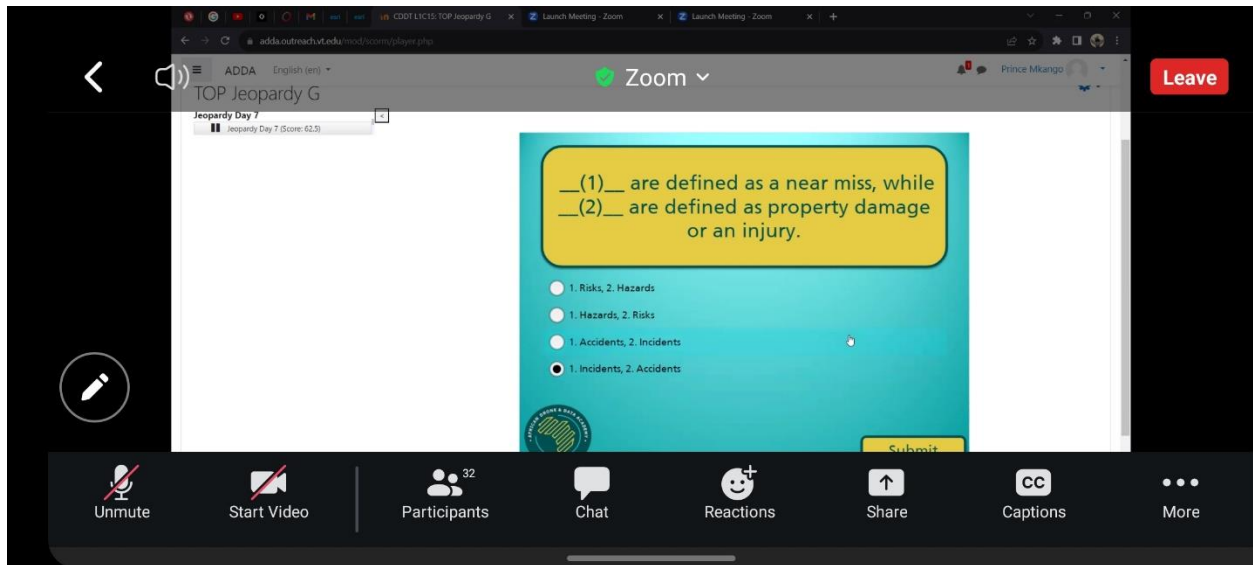

How would you interpret -SH on a TAF report?

LIGHT SHOWERS

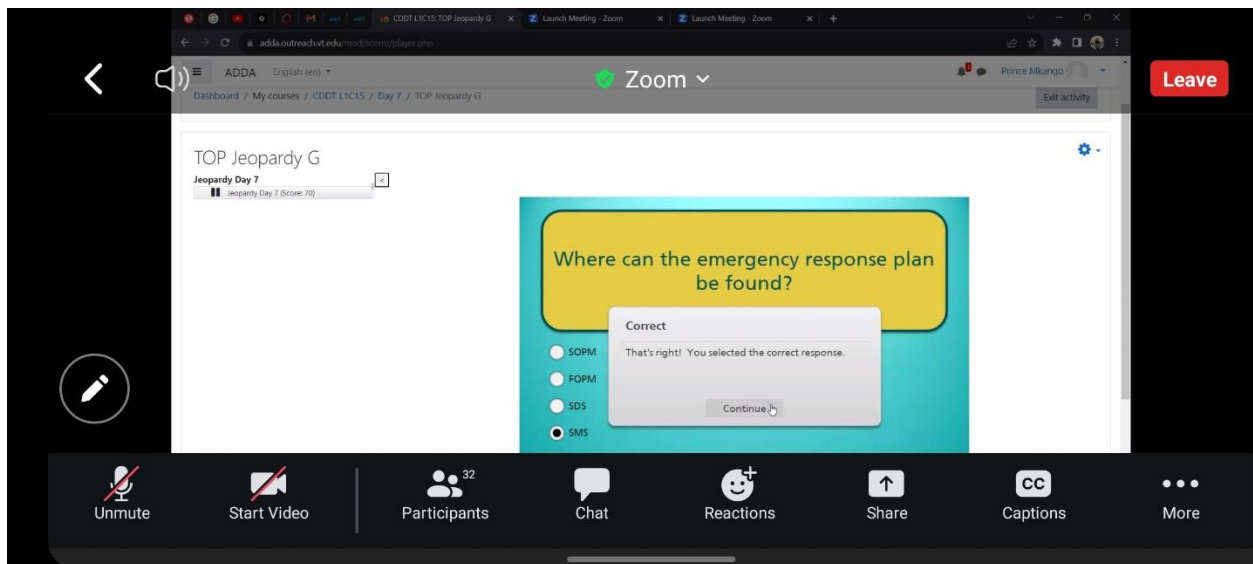

----(1) Are defined as a near miss, while ----(2) are defined as property damage or an injury.

1, INCIDENTS, 2. ACCIDENTS

Where can the emergency response plan be found?

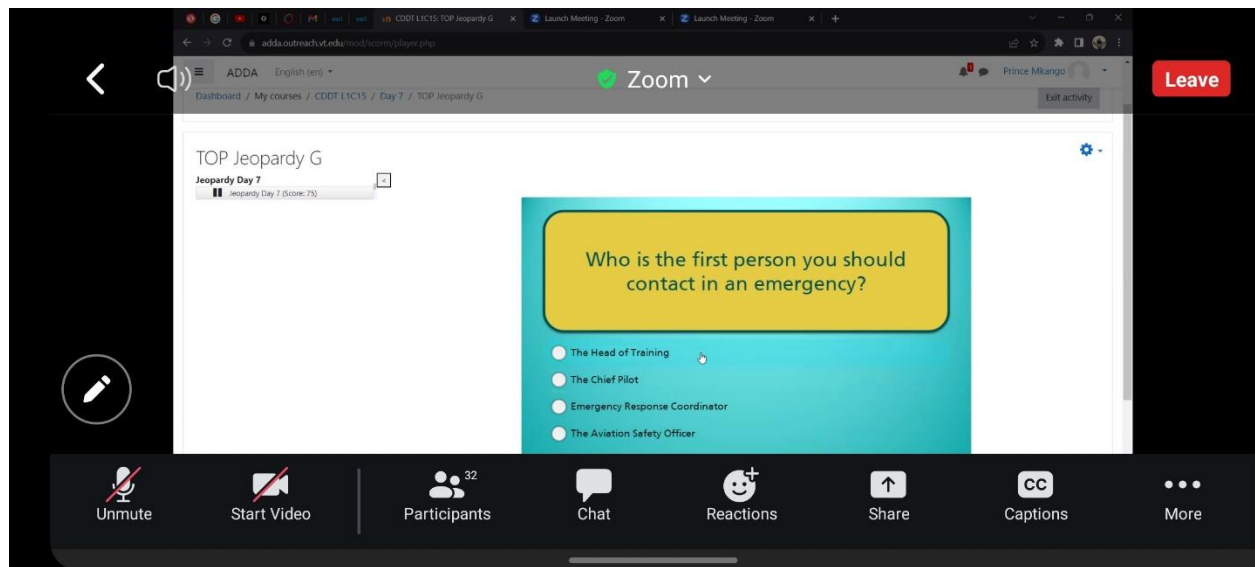

SMS

Who is the first person you should contact in an emergency?

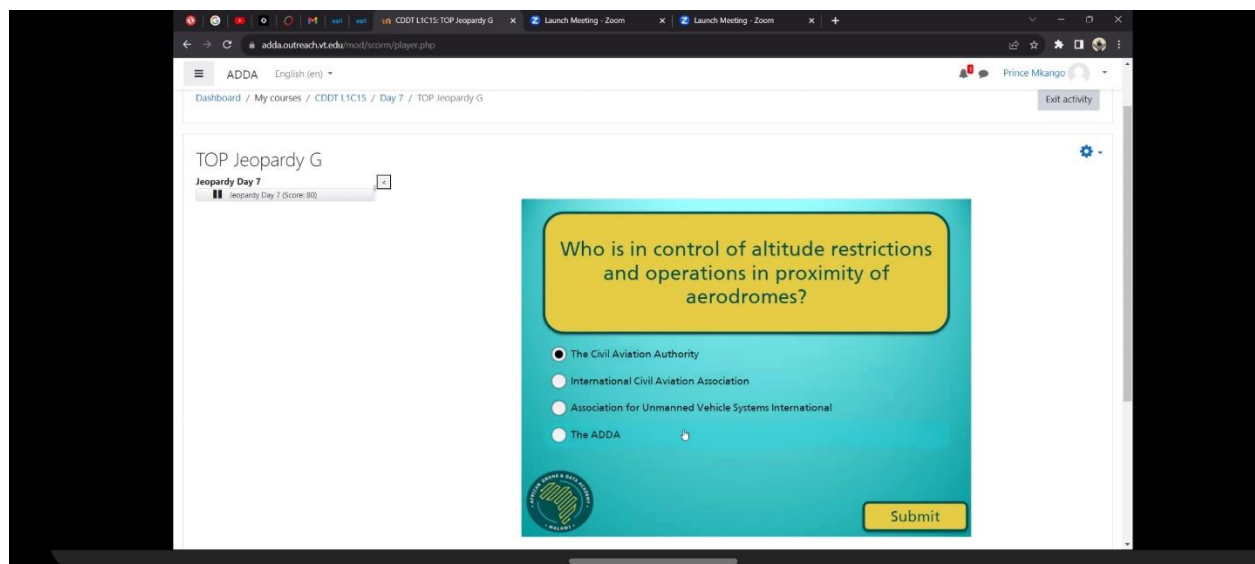

THE

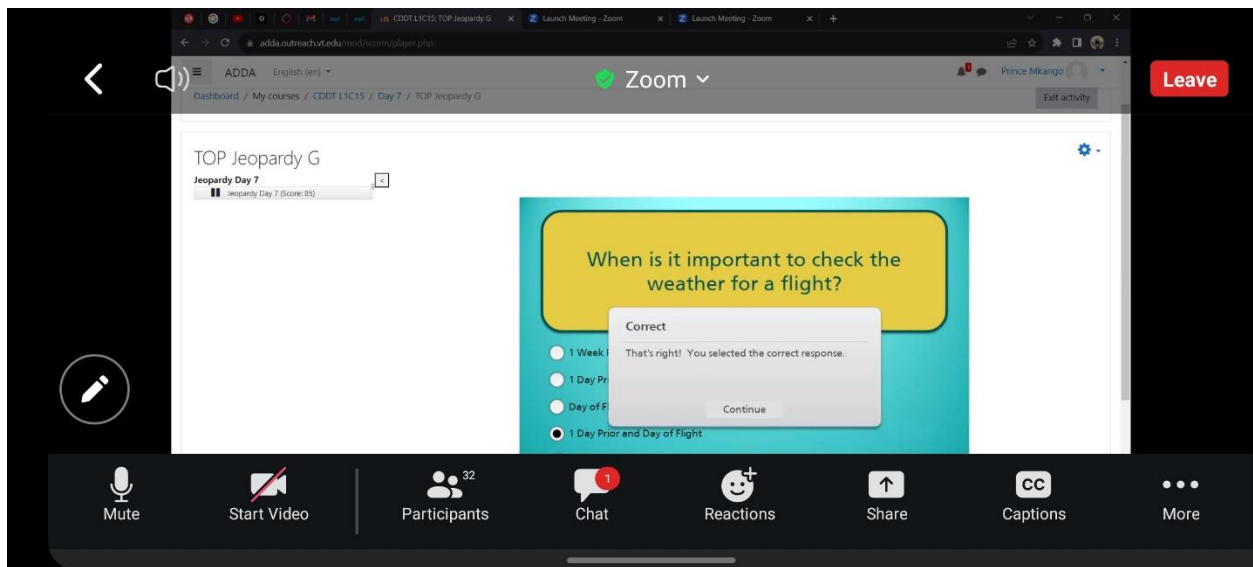

**Who is in control of altitude restrictions and operations in proximity of aerodromes?**

**THE CIVIL AVIATION AUTHORITY**

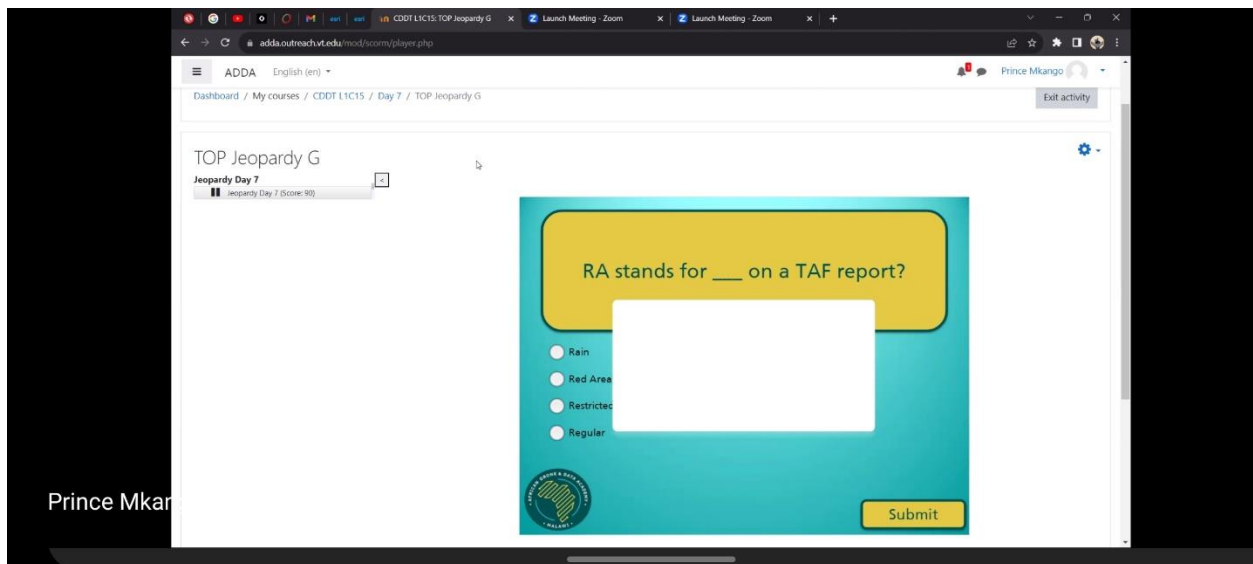

**When is it important to check the weather for a flight?**

**1 day prior and day of flight**

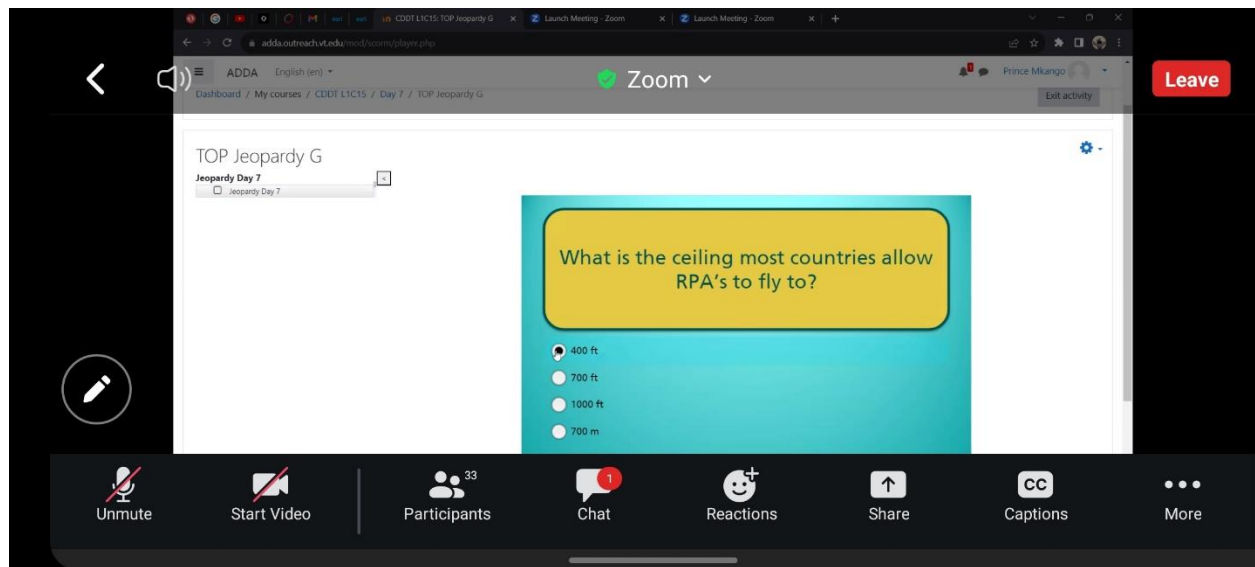

RA stands for --- on a TAF report?

RAIN

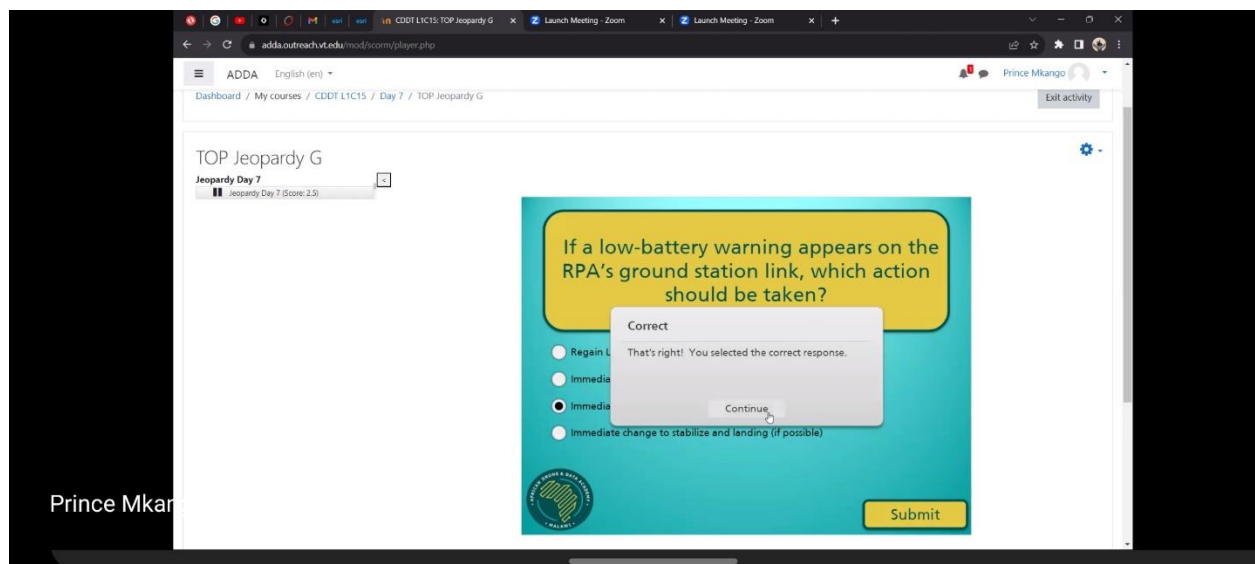

What is the ceiling most countries allow RPA's to fly to ?

400ft

**If a low battery warning appears on the RPA's ground station link, which action should be taken?**

**IMMEDIATE LANDING IN A CONTROLLED AREA**

**When do you need to complete an aircraft inspection**

**BEFORE LEAVING THE LAB AND AT THE FIELD**

ADD A English (en) Prince Mungo

UAMHQA03 / My courses / UAMHQA03 / Day 7 / TOP Jeopardy G

TOP Jeopardy G

Jeopardy Day 7

When do you need to complete an aircraft inspection?

☐ At the field

☐ After a flight

☒ Before leaving the lab and at the field

☐ Before leaving the lab

 Submit
